<b>Seed Collections</b>			
C1002A	Beginning Gardeners Collection	Are you new to gardening or just new to heirlooms and just don't know what seeds to buy and grow? Do you need a collection of tried and true seeds that are easy to grow and harvest? These varieties are well known so that you will know what to do with them when you get them into the kitchen. Included in this specially priced collection is the book "Starting Seeds" by Barbara W. Ellis AND the following eight seed packets: Black Beauty Zucchini Squash, Cherry Roma Tomato , Everbearing Cucumber SMR58 , Genovese Basil , Giant of Italy Parsley, Red Mortgage Lifter Tomato, Jupiter Pepper, Terroir Seeds Lettuce Blend.	\$32.35
C1006	Butterfly Garden Seed Collection	This collection is a great way to attract butterflies and pollinators to your garden. Pollinators are an important part of your gardens ecosystem. More flowers attract more pollinators giving you the benefits of improved production of the fruits and veggies you love. The varieties included in this collection are specific for attracting butterflies of all types but will also bring in pollinating insects and bees. Start improving your garden today with beautiful flowers and fragrances and bring those gorgeous butterflies into your garden or just plant a butterfly garden to enjoy! Included in this specially priced collection is the book Grow A Butterfly Garden by Wendy Potter-Springer AND the following seven seed packets: Purple Coneflower Echinacea, French Marigold-Brocade Mix, Lemon Bee Balm, Mexican Sunflower, Monarch Butterfly Flower Mix, Lemon Queen Sunflower, Tennessee Coneflower.	\$26.00
C1007	Time for Tea Seed Collection	Growing an herbal tea garden can be one of the greatest gardening rewards, and can be just as therapeutic as drinking the tea. The tea garden is a sensory delight, producing colors, aromas and flavors to enjoy throughout the seasons. Hummingbirds and butterflies love to frequent the tea garden, enjoying the sweet nectar and adding to the soothing atmosphere. The aroma, colors and flavors will delight the senses. Teas are a great source of homemade gifts for the holidays, housewarmings and more. By drying the tea herbs and then blending and packaging them in your own unique way, you can share the bounty of your garden with appreciative friends and family. Included in this specially priced collection is the book 15 Herbs For Tea by Marian Sebastiano AND the following five seed packets: Anise Hyssop, Himalayan Basil, Lemon Bee Balm, Virginia Mountain Mint, Roman Chamomile.	\$19.70

Stock #	Product Name	Description	Price
C1009	Kitchen Herb Seed Collection	Our Kitchen Herb Collection is the easiest way to start growing one of the most useful and rewarding gardens you can grow â your own herb garden! Herbs are truly the Seven Wonders of the World in the kitchen, turning ordinary meals into flavor filled dishes with just a few snips of a couple fresh herbs. Herbs are simple and easy to grow, needing little in the way of space, attention or rich soil. They need surprisingly little room, so almost any space from a spot in the garden to the kitchen window sill or a couple of planters off of the back step will work great. Included in this specially priced collection is the book Grow 15 Herbs for The Kitchen by Sheryl L. Felty and the following eight seed packets: Creeping Thyme, Dukat Dill, Romanesco Fennel, Garlic Chive, Giant of Italy Parsley, Genovese Basil, True Greek Oregano, Common/Culinary Sage.	\$29.95
C1015	Urban Gardening Collection	The Urban Gardening Collection is perfect for those gardeners who have little space or live in an Urban area. All these varieties do well in containers. Use succession planting to increase your yields. Remember that you can, with patience and practice, grow almost any plant in almost anything that will hold soil. Included in this specially priced collection is the book "Container Gardening" by Patti Barrett AND the following eight seed packets: Corno di Toro Rosso Sweet Pepper, Chioggia Beet/Candystripe, Easter Egg Blend Radish Mix, Oliver's Pearl Cluster Melon, Little Finger Carrot, Oak Leaf Lettuce, Red/Rhubarb Swiss Chard, Principe Borghese Tomato.	\$29.15
C1016	Salad Bar Seed Collection	Salad Bar Seed Collection Garden greens are easy to grow, produce a maximum amount of food in a small space and makes for a nutritious meal. For much less than what you'd spend on a weeks supply of veggies from the grocery store, you can grow a season-long supply of fresh greens, with plenty left for sharing. Start growing your own salad bar today! Greens are a nutritional bargain, being low in calories but very rich in vitamins and minerals. Learn how to get started producing much more food from a smaller space than you thought possible. Included in this collection is the book "Grow Super Salad Greens" by Nancy Bubel AND the following eight seed packets: Bull's Blood Beet, Flat Leaf Parsley, Garlic Chive, Oak Leaf Lettuce, Saint Anne's Slow-Bolting Lettuce, Rainbow Swiss Chard, Red Malabar Spinach, Red Russian Kale.	\$24.15
C1020	Tomato Lover's Seed Collection	Tomato Lover's Seed Collection Offering a nice introduction to the amazing variety of homegrown heirloom tomatoes, this collection showcases the rich, varied and unique flavors that gained heirloom tomatoes their dedicated following. These tomatoes have been selected for their flavor, productivity, and size. They run from paste and slicing to cherry and salad tomatoes, so a variety of dishes, preparation techniques and flavors beckon you! Included in this specially priced collection is the following book "Grow The Best Tomatoes" by John Page AND the following six seed packets: Amish Paste Tomato, Honkin' Big Black Cherry Tomato, Red Mortgage Lifter Tomato, Oregon Spring Tomato, San Marzano Tomato, and Yellow Pear Tomato.	\$23.85
C1021	Salsa Seed Collection	Salsa Seed Collection Strictly speaking, salsa simply means sauce in Spanish. Today we think of it as the magically addictive combination of tomatoes, chiles, onion, garlic and spices that we devour with tortilla chips, slather on eggs, nachos or quesadillas, or a hundred other dishes that simply come alive with salsa! Served cold, canned or roasted hot off the grill, salsa can easily become very addictive. We present a foundation of ingredients that can easily be grown in your garden and will impress you and amaze your family and friends at the depth and breadth of flavors you can grow. Included in this specially priced collection is the following book "Salsas!" by Glenn Andrews AND the following six seed packets: Anaheim Pepper, Serrano Tampiqueno Pepper, San Marzano Tomato, Tomatillo Verde, Slow Bolting Cilantro, True Greek Oregano.	\$23.45
C1024	Sprouting 101 Collection	Intrigued by sprouts and the ability to grow nutrient dense fresh vegetables in days instead of weeks? Don't quite know where to begin? No real space to garden, but want to grow some healthy food, anytime of year, regardless of weather or sunshine? Sprouts are an excellent example of what can be grown in any climate, at any time of year, with no soil, sunlight or space requirements. Four square inches on a countertop is all that they need. Many backpackers will continually sprout seeds for a fresh food supply when on long, multi-month treks for just this reason. A simple rinse once a day is all that they need to ensure a tasty, highly nutritious fresh food with no work. This special collection of sprouts, sprouting lid and instructions will have you munching on crisp, crunchy, tasty and highly nutritious sprouts in just a few days! The Sprouting 101 Collection includes- Sprouting Jar Screen Sandwich Mix Sprouting Seeds 4 oz packet Alfalfa Sprouting Seeds 4 oz packet.	\$12.00

C1029	Backyard Chickens Collection	<p>Many home gardeners have backyard chickens and want to grow some food for them but don't know how to get started. We created the Backyard Chickens Collection after coaching several clients in growing their chicken's feed with their existing garden planning and seeing how easy it was and how well it worked. As a result, this is one of our most popular and most referred collections! It is a lot easier than most initially think, as the chickens love most any greens and grains that you grow for them. Growing a little more from your current garden takes almost no extra work, but pays with delicious and nutritious eggs! To help you get started, we have written an article called "Heirloom Gardening for Backyard Chickens". Included in this specially priced collection is the following book "Eggs and Chickens" by John Vivian AND the following six seed packets: Black Russian Sunflower, Bloody Butcher Corn, Fordhook Giant Swiss Chard, Mennonite Sorghum, Red Giant Mustard, Red Russian Kale.</p>	\$23.25
C1031	Hummingbird Garden Seed Collection	<p>Hummingbirds are one of the most ethereal and captivating creatures known. From their diminutive size and dazzling beauty to their status as objects of affection and worship, hummingbirds have enthralled us for centuries. Gardening to attract hummingbirds is much easier than you might think. The perfect habitat is fairly straightforward and simple food, water, plenty of perches and some shade and shelter will bring them in. In many cases it is very easy to adapt a current garden to make it very attractive to these flying jewels. Our Hummingbird Garden Collection makes it easy to understand what hummers like and want in a habitat, so you can plan and plant to bring some flashy colors to your garden! Included in this specially priced collection is the book Grow A Hummingbird Garden by Dale Evva Gelfand AND the following three seed packets: Hummingbird &amp; Butterfly Mix, Fragrant Flower Mix, Scarlet Sage.</p>	\$13.40
C1033	Cool Season Greens Seed Collection	<p>Cool Season Greens Fast-Growing Delectable Tastes The thought of a cooler season usually brings to mind Fall and the return of fresh, crisp greens after what seems like forever. No more wilted, bolted, bitter lettuce or spinach! Abandon the limp and insipid store-bought greens for something far better. Just the thought of biting into soft-yet-crunchy Mache or the sweet crispness of a just-picked leaf of spinach almost makes the wait of hot weather worth it. Almost. Look forward to the indescribable wholesome green-ness of kale and Swiss chard followed by the spicy bite of arugula, bolstered by endives lacy leaves in your cool-season salads. Impress your dinner guests with the sophistication of your greens collection. These are the most popular greens which can be used fresh for a salad, or prepared in a number of different ways. A taste of garden freshness anytime of year! Included in this specially priced collection is the book "Grow Super Salad Greens" by Nancy Bubel AND the following seven seeds packets: Rocket Arugula, Frisee Endive, Lacinato Kale, Giant Nobel Spinach, Rainbow Swiss Chard, Tatsoi Mustard, Corn Salad/Lambs Lettuce/Mache.</p>	\$26.00
C1034	Cool Season Roots Seed Collection	<p>Cool Season Roots Seed Collection Under the ground, these root vegetables, keep on getting sweeter as the days turn cooler. Root crops can grow for a much longer period of time. Some will over-winter with a little added mulch-straw, giving you a nice surprise in the Spring. Included in this specially priced collection is the following "Gardener's Knowhow Chart" AND the following seven seed packets: Bull's Blood Beet, Japanese Minowase Radish (Daikon), Bambina Carrot, Nantes Scarlet Carrot, American Flag Leek/Giant Musselburg, Seven Top Turnip, Early White Vienna Kohlrabi.</p>	\$26.05
C1035	Gourmet Lettuce Seeds Starter Pack	<p>Gourmet Lettuce Seeds Starter Pack For those who don't know where to start with heirloom lettuces, or those who want to explore more and need some guidance. Our hand-selected starter pack includes six of the easiest to grow and most productive varieties of heirloom lettuces perfect for new gardeners or an easy choice for established gardens looking for a proven lettuce mix to plug into their garden. Included in this gourmet lettuce starter pack is one packet of each of the following varieties: Buttercrunch Bibb Lettuce Little Gem Lettuce Green Salad Bowl Lettuce Black-Seeded Simpson Lettuce Red Romaine Lettuce Freckles Lettuce</p>	\$17.01
C1036	Aromatherapy Garden Seed Collection	<p>Aromatherapy is the art and science of using natural aromatic plant essences to promote the health of body, mind and spirit. It works to unify physiological, psychological and spiritual processes to enhance an individuals innate natural health. No matter the size of your garden, from a few containers to a large traditional one, an aromatherapy garden will give multiple benefits. From wondrous aromas to tantalize and captivate your senses, to the butterflies, bees and other pollinators they attract, to the culinary and traditional medicinal uses, the plants used in aromatherapy truly have multiple and generous benefits. Many of these are excellent as herbal teas as well. Included in this specially priced collection is the Aromatherapy Garden Chart , a sample bar of lavender soap and the following six seed packets: Anise, German Chamomile, Lemon Balm, English Thyme, Romanesco Fennel, True Greek Oregano.</p>	\$24.55

Stock #	Product Name	Description	Price
C1040	Classic Vegetable Seed Collection	Classic Vegetable Seed Collection is a great place to start a garden growing! Don't know what to choose, we have assembled this seed collection to get you the most variety and flavors. Included in this specially priced collection is the Growing Vegetables Chart and the following eight seed packets: Kentucky Wonder Bean, Golden Detroit Beet, Savoy Perfection Cabbage, Roumanian Sweet Pepper, Bambina Carrot, True Lemon Cucumber, Glorious Greens Lettuce Mix, Red Brandywine Tomato.	\$26.86
C1044	Four Sisters Garden Seed Collection	Four Sisters Garden Seed Collection Native American agriculture is well-known for the Three Sisters approach of corn, beans and squash supporting, protecting and nourishing each other. Several other crops were very important in Native American gardening, with sunflowers being very prominent on that list. There is very strong evidence sunflowers were the very first crop to be cultivated, making them the Eldest Sister! Buffalo Bird Woman of the Hidatsa tribe talked of planting sunflowers first leading to a Four Sisters' garden. She followed century's old agricultural practices in the fertile bottomlands of the Missouri River, where the women of the family grew corn, beans, squash and sunflowers. Our Four Sisters Garden Seed Collection pays homage to these four crops and the importance of their interrelatedness then and now. We encourage you to try this method of gardening and see for yourself the amazing results. Included in the Four Sisters Garden Seed collection is the following book "Native American Recipes and the following four seed packets: Black Russian Sunflower, White Eagle Corn+C27, Black Beauty Zucchini, Rattlesnake Bean.	\$17.95
C1045	Ultimate Grain Seed Collection	Our Ultimate Grains is a collection of the easiest growing, tried and true grains to get started with. They are ideally suited for the home gardener as they need no specialized equipment to sow, harvest or process and give large returns for the amount of seed sown. All are highly nutritious for people, poultry and animals. The book Homegrown Whole Grains walks you through the process from planting to cooking, showing how to grow, harvest, store, grind, and cook each of the grains in the collection. It's surprisingly easy, and it takes less space than you might imagine. A backyard field of grains can give you a loaf of bread a week for a year. Complete growing instructions and recipes are included. Additional benefits of growing grains include grass and fodder for poultry and improving soil health through the extensive root systems of heirloom grains. The collection includes the book "Homegrown Whole Grains" and the following five seed packets: White Sonora Wheat ( 6 oz) Hopi Blue Corn, Pearl Millet, Red Garnet Amaranth.	\$31.00
<b>Flowers</b>			
F1001	Alpine Strawberry 'Ruegen' Seeds - (Fragaria vesca) Approx 30 seeds per pack	Ruegen has intensely delicious fruit on beautiful, naturally-everbearing, compact plants without runners. Clusters of large, white flowers followed by remarkably sweet, tasty red berries, June - late fall. Evergreen in warm areas. A gourmet delight, these "fraises des bois" of legend, date to the 1700's. For containers, rockgardens, to line paths, driveways. The compact, heavy blooming, runnerless perennial plants produce large amounts of fragrant and tasty strawberries continuously from spring through fall. Space the plants at least 18" apart or use a very large container for maximum production. Superb in containers. Will often naturalize in partly shaded well watered areas of your garden. Day-neutral, grows best in zones 5-8, but will tolerate colder climates with heavy mulching.	\$4.50
F1002	Alpine Strawberry 'White Soul' Seeds - (Fragaria vesca) Approx 30 seeds per pack	White Soul is a hardy perennial that provides fresh strawberries in small spaces. Ongoing blooms, delicious fruits, easy. Vigorous, runner less, heavy-cropping variety with the same leaf, size and structure as the red only the berries are white, very sweet, slightly larger, and have a hint of pineapple in their taste. Strawberries produce continuously from spring through fall. Space the plants at least 18" apart or use a very large container for maximum production. Superb in containers. Will often naturalize in partly shaded well watered areas of your garden. Day-neutral, grows best in zones 5-8, but will tolerate colder climates with heavy mulching.	\$4.50
F1004	Joseph's Coat Amaranth Seeds - (Amaranthus tricolor) Approx 100 seeds per pack	Also called Summer Poinsettias, these glamorous plants make outstanding garden accents. Multiple branches of bright green leaves are topped by poinsettias in show-stopping blends of red, yellow and green. Loves heat and sun. Direct sow in warm soil, mid to late spring.	\$3.15

Stock #	Product Name	Description	Price
F1005	Love-Lies-Bleeding Amaranth Seeds - (Amaranthus caudatus) Approx 100 seeds per pack	Magnificent. Long, exotic ropes of rich, red flowers on spectacular stalks. Impressive in the garden and cut fresh or dried. Achieves best color in full sun and poor soils. Grown by Thomas Jefferson as early as 1786. Sometimes called Inca wheat, Amaranthus caudatus was a staple grain for the Incas and Aztecs. Nearly as important in their diets and as widespread in tropical areas of America as was maize (corn). The cereal-like grain (about the size of a poppy seed) is high in protein, and high in lysine, an amino acid usually deficient in vegetables. In fact, amaranth seeds are extremely nutritious, with more protein than most cereals and a better balance of amino acids for the human diet than any other plant. The species is still cultivated in Bolivia, Peru and Ecuador, and now in India for its young leaves and seeds.	\$3.15
F1011	Rocket Candytuft Seeds - (Iberis amara) Approx 100 seeds per pack	Low bushy plants produce abundant brilliant, sweet-scented flowers in a mix of fairy colors all summer. Mounds up to 2' in diameter boast shiny green foliage. A Colonial favorite, Candytuft was always included in the herb garden as a treatment for rheumatism and used for centuries as a seasoning. Because of the extreme ease of its cultivation, it's great for a child's garden. Purple forms of candytuft were in European gardens by the last 1500s when this was known as "Billy-Come-Home-Soon". Butterflies love it. It was hard to decide whether to put this in herbs or flowers! Scatter seeds into your garden site in spring in cool soil.	\$3.15
F1015	Blue Flax Seeds - (Linum lewisii) Approx 100 seeds per pack	Blue Flax is one of the most beautiful, of the all-blue flowering plants with blue-green narrow leaves on graceful 2' tall stems. This native wildflower offers profuse, satiny, sky-blue flowers each morning, from early to late summer. Easy to grow and quick to establish, it will flush with blooms starting its second year. Grows from expanding clumps of stalks with 1/2 to 1" wide flowers. Produces a continual profusion of blooms that each lasts a day, with new ones appearing each morning. This species is named "lewisii" in honor of Meriwether Lewis of Lewis & Clark, since it was discovered on their expedition across the plains. A source of flax fiber, flaxseed and linseed oil. Use in borders and rock gardens. Carefree, will self-sow gently. Very adaptable and tolerant of drought, heat and cold weather.	\$3.15
F1021	Pot Marigold Seeds - (Calendula officinalis) Approx 50 seeds per pack	An ancient Marigold, known today as Calendula, is very different from what are commonly called the Marigolds of today - the Tagetes family. The Common Marigold is familiar to everyone, with its pale-green leaves and golden orange flowers. It is said to be in bloom on the calends of every month (the first day of each month on the Roman calendar), hence its Latin name, and one of the names by which it is known in Italy - fiore dognimese countenances this derivation. It was not named after the Virgin, its name being a corruption of the Anglo-Saxon merso-meargealla, the Marsh Marigold. Old English authors called it Golds or Ruddes. It was however, later associated with the Virgin Mary, and in the seventeenth century with Queen Mary. From A Modern Herbal (1931)	\$3.15
F1030	Broom Corn Seeds - (Sorghum vulgare) Approx 200 seeds per pack	A tall annual grass that looks like a corn plant but makes fan-shaped seed heads instead of ears. The seeds mature in the autumn in a multitude of colors, shades of red, black, amber and brown. The edible seeds can be sprouted, cooked, popped, or ground into flour. The straw can be made into brooms or tie untrimmed tassels into bundles to feed birds through winter. Ideal for kids, crafts and critters. Easy to grow in full sun.	\$3.35
F1031	Bright Lights Cosmos Seeds - (Cosmos sulphureus) Approx 200 seeds per pack	Vibrant 2-3 inch flowers that bloom in sunset colors of red, orange and yellow. A resilient and versatile heirloom flower that tends to be very easy to grow from seed. Distinctive, filigreed foliage. Excellent low maintenance drought tolerant flowers that prefer full sun. Do not over water! Early bloomer that lasts into the fall with a few light frosts.	\$3.15
F1033	Costmary Seeds - (Tanacetum balsamita) Approx 100 seeds per pack	Costmary is not as common as in the past, but its charming appearance, sweet fragrance and history is filled with fascinating tales from across the globe. Costmary is also called mace, Alecost and Bible leaf. Details Soft, aromatic grey green foliage and bunches of small cheery yellow flowers. Closely related to tansy, its shiny pear-shaped light green leaves are from 6-8" long. Thrives most anywhere, does best in dry conditions, spreads by rhizome when happy.	\$3.15
F1041	White Shooting Stars Flowering Tobacco Seeds - (Nicotiana sylvestris) Approx 100 seeds per pack	Flowering Tobacco has candelabras of drooping, bridal-white, long, shooting star flowers that cluster on graceful, bold stems. Vigorous, rosette-forming plant that typically grows 3 - 5' tall with pendant clusters of long-tubed, trumpet-shaped, white flowers that resemble shooting stars. Flowers are legendary in their fragrance. It is not uncommon for their aroma to be noticed 20' downwind. Blooms summer to fall, providing good color and fragrance for late summer borders. Blossoms emit a special radiance at sundown, and an intoxicating, jasmine-like fragrance in the evening.	\$3.15

Stock #	Product Name	Description	Price
F1042	Coconut Geranium Seeds - (Pelargonium grossularioides) Approx 100 seeds per pack	Also called Gooseberry Geranium, has very strong coconut-scented leaves and flowers, low-growing, wide-spreading plants. Blooms late spring to first frost with a trailing habit that works well in hanging baskets, over rocks and walls. Suitable for fresh or dried herbal arrangements, potpourris and for growing indoors. In Victorian times, it was found in parlors, on porches and in gardens. The scented leaves were baked into cakes and confections. Drought-tolerant, good for xeriscaping, easy to grow, needs little attention. Like many fine, old varieties, this fell out of favor as new hybrids were bred, but is being rediscovered and treasured by gardeners in the know.	\$3.15
F1046	Black Hollyhock Seeds - (Alcea rosea) Approx 35 seeds per pack	Silky, dark-purple flowers add a dramatic dimension to gardens and a lovely deep, rose-purple color to herb teas. Like other members of the mallow family, it helps soothe irritated mucous membranes. Described as early as 1629 by John Parkinson, as 'dark red like black blood', it was grown by Thomas Jefferson, and offered by John B. Russe in an 1827 catalog. The elusive maroonish-black color of this old garden favorite has fascinated gardeners for centuries; its height, single flowers and rare color combine to create a riveting presence in the garden. Historical tidbit.... Old fashioned hollyhocks grew tall enough to disguise an outhouse...so were called "outhouse hollyhocks". Since outhouses were an unmentionable subject in Victorian days, visitors knew to look for the hollyhocks when seeking the outhouse, rather than asking where it was!	\$3.15
F1047	Indian Spring Mix Hollyhock Seeds - (Alcea rosea) Approx 35 seeds per pack	Antique English variety which has been grown since at least the early 1500s, possibly earlier. These towering highlights of traditional English cottage and country gardens have 3 to 5 inch blossoms in a range of colors from white to a medium red. In ideal conditions, they can grow to 9 feet tall, bringing interest and drama while drawing the eyes upward. Also excellent as a long lived cut flower for displays.	\$3.15
F1053	French Marigold Brocade Seed Mix - (Tagetes patula) Approx 100 seeds per pack	This charming, cheerful French marigold is the Brocade variety having early and continuous frilly two inch blooms of mahogany red with golden centered blossoms. One of the hallmarks of the French marigolds is the double, daisy or carnation-like flower heads that usually grow in clusters. They are commonly planted in butterfly gardens as a nectar or energy source for the butterflies. Details Growing 12 inches they are just the right height for edging flowerbeds and borders with a chic, neat, little growth habit and elegant dark green foliage. Extremely easy to grow and brightens the garden all summer long. Blooms early summer to frost, even in harsh Northern climates. This is the beautiful and beneficial marigold that repels insects and nematodes, so plant it liberally throughout the garden.	\$3.15
F1062	Climbing Nasturtium, Tall Mixture Seeds - (Tropaeolum majus) Approx 25 seeds per pack	Profuse and sweet-yet-spicy smelling flowers in a gorgeous mix of reds, maroons, oranges and creams require no fertilizer and little water. Climbing Nasturtium is quick-growing trailing vines (also good for hanging baskets) that thrive on benign neglect - easily covering trellises, fences or summer arbors. Succeeds in all but the coldest areas. The young leaves make a pleasant pepper substitute even in pepper-restricted diets and they have an unusually high vitamin C content. The immature green seeds can substitute for capers and add an interesting touch to salads.	\$3.15
F1064	Empress of India Nasturtium Seeds - (Tropaeolum majus) Approx 25 seeds per pack	Cascading waves of distinctive, blue-green foliage contrast with vibrant, vermilion flowers. Hummingbirds love the flaming-red blossoms which appear from late spring til frost. The edible seed pods, flowers and leaves are used in salads, cakes and garnishes. Plant in beds borders, edgings and containers. Easy, fast grower that is somewhat drought tolerant.	\$3.15
F1067	Nodding Onion Seeds - (Allium cernuum) Approx 35 seeds per pack	This native plant and member of the Allium family has erect stems that hold globes of drooping or nodding, white, bell-shaped flowers that turn lilac as they age and form exquisite seed heads. Blooms June through early fall. Underrated, underused, charming, valuable and little-known garden plant. Low maintenance.	\$3.35
F1068	Kentucky Old Fashioned Petunia Seeds - (Petunia hybrida) Approx 100 seeds per pack	This Petunia is a mix of clear tones of rose, burgundy, purple, and light and dark lavender fragrant flowers, including bi color, on sprawling plants that bloom all season until frost. Self-sows, but you will get earlier flowers by starting the seeds indoors. Much reward for little effort.	\$3.15
F1070	Shenandoah Petunia Seeds - (Petunia hybrida) Approx 100 seeds per pack	Spreading growth habit gives it a stage to show off its abundant luminescent pink, lavender and white, large-sized fragrant blooms. This old-fashioned petunia is more cold tolerant, disease resistant and heat tolerant than most modern hybrids. Its origin is the Shenandoah Valley of Virginia and it literally oozes old southern charm and grace. America's favorite annual for sunny sites, noted for its prolific summer-long flowering, spreading or cascading growth habit and alluring, old-fashioned aroma that is hard to find in today's modern hybrids.	\$3.15

Stock #	Product Name	Description	Price
F1071	Vining Petunia Seeds - (Petunia multiflora) Approx 100 seeds per pack	Single flowers are white, pink, lavender and purple on strong trailing stems. Disguise fences or other areas with heavenly clouds of fragrant flowers, spring through frost and beyond. Will self sow. Looks pretty in hanging baskets. An especially rewarding heirloom from Iowa.	\$3.15
F1072	Wild Petunia Seeds - (Petunia integrifolia) Approx 100 seeds per pack	Lovely 2" magenta flowers with dark throats ramble, en mass, across short, spreading plants repeatedly until hard frost. This original petunia, the parent of modern petunias, has been overlooked for years as hybridized varieties abound. The original is hard to beat for color, habit and sheer charm. Great for borders, displays and containers of all sizes. All-time summer favorite that needs little care.	\$3.15
F1092	Evening-Scented Stock Seeds - (Matthiola longipetala) Approx 100 seeds per pack	Stock has small pretty purple and lilac flowers and their fragrance in the evening is unforgettable. Tuck among other flowers near porches, windows, decks, etc. to enjoy its powerful perfume. You will want them everywhere, every season. Winter annual in warmest regions. 18 in.	\$3.15
F1095	Mexican Sunflower Seeds - (Tithonia rotundifolia 'Torch') Approx 50 seeds per pack	The Goldfinches sit on the flowers and daintily eat the seeds. Bushy plants with attractive green foliage for back of the border, hedges, focal points. A treat for the senses.	\$3.15
F1096	Maximilian's Sunflower Seeds - (Helianthus maximiliani) Approx 50 seeds per pack	A Naturalist's Sunflower A hardy and very showy perennial that towers above surrounding vegetation when in bloom. It sends annual stems up from an underground root crown, helping to spread and form dense plant clusters while reinforcing soil and preventing erosion. Its height ranges from 6 - 10 feet tall with numerous 5-inch diameter flower heads. Butterflies, beetles, and long- and short tongued bees consume the nectar and pollen. Butterfly caterpillars feed on the leaves.	\$3.15
F1097	Van Gogh Sunflower Seed Mix - (Helianthus annuus) Approx 50 seeds per pack	Paint Your Garden With Color The Van Gogh Sunflower Mix was created specifically for those who want loads of sunflowers without buying multiple different packets. This mix provides armloads of garden and cut sunflowers of every imaginable type and color. Growing in height from 4 - 7 ft. tall, the assortment contains singles and doubles, with flowers ranging from 5 or 6 inches to 8 inches or more. Colors span an exceptional range: cream, lemon-yellow, burgundy, orange, gold, bronze and red. Sun-sational!	\$3.15
F1112	Tennessee Coneflower Seeds - (Echinacea tennesseensis) Approx 50 seeds per pack	This Echinacea has bright pink 12-24" flowers that are different from other coneflowers because of their upright petals and centers of deep chocolate brown. As the flowers age they develop a beautiful silvery tone.	\$3.15
F1116	Four Leaf Clover /Legendary Good Luck Flower Seeds - (Trifolium repens) Approx 40 seeds per pack	Change your luck, add to existing good fortune, and bring luck to a friend. This perennial best-seller is a hit with everyone who grows it from kids to grandparents. Hardy perennial that is perfect for gardens, containers, and hanging baskets. Three leaf clovers appear initially, and then in a few months, new growth brings 4-leaf clovers as well as pink tinged white flowers. Normally, finding a real four-leaf clover involves searching carefully through the three-leafed clover mounds for the rare and lucky four-leafed variation. In the wild you have a one in ten thousand chance! Our grower has spent the better part of a decade breeding for the rare four leafed variety, greatly increasing your chances of finding one much quicker. With our four leaf clover, your chances are 1 in about 50 instead of 1 in 10,000.	\$3.55
F1120	Black Russian Sunflower Seeds - (Helianthus annuus) Approx 50 seeds per pack	These sunflowers are the giants of the garden at 12-15' tall and blooms that are 8" across! Petals are a bright golden yellow and centers can be either quite dark or quite light. Seeds are black and striped. A great plant for attracting birds to the garden.	\$3.15
F1122	Skyscraper Sunflower Seeds - (Helianthus annuus) Approx 50 seeds per pack	This tall beauty can grow 12' in height with bright yellow blooms that are easily more than one foot across the center and as tall as a skyscraper. Plant a patch of these for a backyard forest! Great for shading or as a wind break. This large seeded variety produces well filled highly nutritious edible seeds for roasting or eating raw. Cut heads before birds get to the seeds.	\$3.15
F1125	Dwarf Sunspot Sunflower Seeds - (Helianthus annuus) Approx 50 seeds per pack	These dwarf sunflowers only grow 2-3 feet tall, and is one of the easiest flowers to grow in any garden. Makes a huge statement and catches eyes with its single large flower head 10-12 inches in diameter. Yellow flowers with golden brown centers are perfect for deeper containers or smaller flower beds.	\$3.15
F1128	Dahlia-Flowered Zinnia Seed Mix - (Zinnia elegans) Approx 50 seeds per pack	Large, 4-5" blooms in shades of orange, purple, red, white, and yellow on strong stems make this mix perfect for the cut flower gardener. Plant after last frost. Sow seed 2" apart and 1/16" deep. Thin to 12" apart.	\$3.15

Stock #	Product Name	Description	Price
F1130	Canary Bird Vine Nasturtium Seeds - (Tropaeolum peregrinum) Approx 25 seeds per pack	Lustrous canary yellow flowers on a vigorous vine with shiny green leaves. It is said that from a distance it appears as though the plant is covered with miniature canaries. This Nasturtium relative is a very fast growing climber. It's foliage is deep lobed and very attractive. The flowers are edible.	\$3.15
F1133	Plein Blanc Inerme Ameliore Cardoon Seeds - (Cynara cardunculus) Approx 50 seeds per pack	Grayish green thistle with beautiful purple flowers that make a colorful addition to your flower or vegetable garden. The fleshy base of each leaf is edible and is considered an Italian delicacy.	\$3.35
F1141	Teddy Bear Sunflower Seeds - (Helianthus annuus) Approx 50 seeds per pack	Teddy BeMany double yellow mum-type flowers on branching plants up to 6' tall, small black seed. A beautiful show piece for the garden or as a cut flower on the dining room table.	\$3.15
F1144	Johnny Jump-Up Seeds - (Viola x williamsiana) Approx 50 seeds per pack	A classical garden violet, also known as viola, wild pansy and heart's ease. An ancestor of the modern pansy with delicate purple and yellow flowers growing to about 9 inches tall from spring to fall, Johnny Jump-ups produce many more flowers over a longer season than pansies and are much more heat tolerant. A native wildflower in Spain and the Pyrenees mountains, the flowers are edible and free blooming all season.	\$3.15
F1146	Hopi Ceremonial Tobacco Seeds - (Nicotiana rustica) Approx 100 seeds per pack	Very potent variety of tobacco. The high concentration of nicotine in its leaves makes it useful for creating organic pesticides. Used extensively in rituals and religious ceremonies but also used for cramps, sharp pains and headaches. Poultice of beaten plant used for boils and applied to insect bites. Tender annual that grows 18-24 in. and produces clusters of pendulous greenish-white flowers that open in early evening and emit a rich, jasmine-like aroma. More cold-hardy than other tobaccos. Grows slowly at first until established, then takes off.	\$3.15
F1150	Beneficial Insectary Wildflower Seed Mix Approx 200-300 seeds per pack	Attract the honeybee and other "good" insects into your garden. Includes White Yarrow, Baby's Breath, Candytuft, Tidy Tips, Alyssum, Baby Blue Eyes, California Bluebells and White Dutch Clover. GENUS/SPECIES and COMMON NAME Achillea millefolium - White Yarrow Gypsophila elegans - Baby's Breath Iberis umbellata - Candytuft Lobularia maritima - Alyssum Nemophila menziesii - Baby Blue Eyes Phacelia campanularia - California Bluebells Trifolium repens - White Dutch Clover.	\$3.15
F1151	Terroir Seeds Cut Flower Seed Mix Approx 200-300 seeds per pack	From Asters to Zinnias this mix is comprised of a nice selection of 27 varieties of flowers that are perfect to use as fresh cut flowers. Also a great addition to your garden to attract birds, bees and insects.	\$3.15
F1152	Hummingbird & Butterfly Seed Mix Approx 200-300 seeds per pack	23 great garden variety flowers from Butterfly Milkweed to Penstemon, this mix will be bringing the hummingbirds and butterflies to your garden all season long. The more pollinators you bring to your garden the more productive your whole garden will be.	\$3.15
F1153	Tom Thumb Nasturtium Seed Mix - (Tropaeolum majus) Approx 25 seeds per pack	This is a dwarf, compact variety that holds its flowers above the foliage for showier color. Grows 8 - 14 inches tall. The mix consists of red, dark orange, light orange, yellow, and dark red. Great for borders, beds, containers or as a cheerful groundcover. Fast growing annual that is incredibly easy to grow and seems to thrive on a little neglect. Considered to be the ultimate edible flower as the leaves, flowers, stems and seeds are all edible with a peppery, softly spicy flavor similar to watercress. Add the flower petals to salads for a bright, spicy note. Makes an unusual and tasty garnish for steaks, especially with a bit of herbed butter or blue cheese. Other uses include decorating cheeses, making nasturtium pesto, adding flavor and color to soups, and stuffed nasturtium flowers.	\$3.15
F1154	Dwarf Petunia Seed Mix - (Petunia nana compacta) Approx 100 seeds per pack	A 1950's garden favorite with sturdy compact growth, multitudes of Red, Rose, Scarlet, Salmon, Violet and White flowers. Long favored as the most popular flowering annual plant for use in hanging baskets, window boxes and colorful border plantings. Very attractive to hummingbirds and butterflies. Compact, low growing 6 inch tall plants with a profusion of small flowers. Pinch out old flowers to renew growth and encourage more flowering time.	\$3.15
F1156	Hibiscus/Jamaica/Roselle Seeds - (Hibiscus sabdariffa) Approx 15 seeds per pack	Hibiscus is a perennial that is grown as an annual in more temperate climates with erect, bushy, herbaceous shrub up to 8 ft tall, with smooth, cylindrical, typically red stems. This Terroir Seeds exclusive strain matures much earlier than others, in as little as 100 days, when others have yet to set any flowers.	\$3.15
F1165	Fragrant Flower Seed Mix Approx 200-300 seeds per pack	A blend of colorful annuals and perennials that provide lovely fragrances all season long. Deliciously scented for us and intoxicating for the pollinators!	\$3.15
F1166	Antelope or Spider Milkweed (Asclepias asperula) Approx 100 seeds per pack	The milkweed plants play a critical role in the monarch life cycle. Each spring Monarchs move across the United States, laying eggs on native milkweed, the only plant that serve as food for newly hatched monarch caterpillars.	\$3.55

Stock #	Product Name	Description	Price
F1168	Lemon Queen Sunflower Seeds - (Helianthus annuus) Approx 50 seeds per pack	A very prolific, popular sunflower with unique lemon-yellow pointed petals having chocolate brown centers up to 4-5" across. Sought after for their bright creamy lemony yellow flowers and their ability to attract pollinators by the droves. We have seen honey bees, bumble bees, carpenter bees, and several kinds of butterflies visiting throughout the day. Plants are multi-branch have multiple flowers grown along the main stalk - and grow up to 6 ft. tall. Plant with taller or shorter sunflowers with darker blooms for dramatic contrast.	\$3.15
F1170	Butterfly Milkweed Seeds - (Asclepias tuberosa) Approx 100 seeds per pack	Support the Monarchs and More Butterfly Milkweed, also known as Butterflyweed, Orange milkweed and Pleurisy root is a bushy, 1 1/2 - 2' tall perennial prized for its large, flat-topped clusters of bright-orange flowers that typically bloom May through September. It is native across much of the US, with the exception of the Northwestern states.	\$3.55
F1171	Monarch Butterfly Flower Seed Mix Approx 200 -300 seeds per pack	This Mix is essential in supporting the needs of these incredible butterflies both with nectar sources to feed the adults and milkweed host plants for them to lay their eggs on. To be successful in attracting all butterflies, and especially Monarchs, to your garden you need a combination of both nectar and host plants, as both male and female butterflies have different needs with nectar but will often converge where there are host plants. Monarchs utilize the milkweed species exclusively as host plants, as the caterpillar ingests the toxins in the milkweed, making itself poisonous to most predators. This is the only plant that provides for these needs. Flower nectar provides both energy and rehydration for butterflies. Most flower nectar is about 20% sucrose, a natural sugar, and 80% water, an important energy source of carbohydrates, supplying a complex range of sugars to keep the energy levels high. Butterflies taste through their feet when they land on a flower!	\$3.15
F1172	Single Mixed Corn Poppy Seeds - (Papaver rhoeas) Approx 200 seeds per pack	This mix shows off colors from deep, almost blood red to a lighter, almost white. The plants grow 12 – 30 inches tall and are very attractive to pollinators. Direct sow in early to late spring for a summer bloom, and in late fall for an early spring showing. Expect a profusion of flowers from June through to September from this fully hardy flower that self-sows readily.	\$3.15
F1173	Honey Bee Flower Seed Mix Approx 200-300 seeds per pack	A carefully chosen, hand-selected blend of 19 annual and perennial flowers that provide both nectar and pollen to honey bees. These flowers are proven favorites of honey bees in our gardens and will provide bee forage all season long. They have the added benefit of being strong attractants for all kinds of pollinators, but especially honey bees and other honey making bees. Nectar is an important energy source of carbohydrates, supplying a complex range of sugars to keep the energy levels high, while pollen is a vital source of protein and fats. It is critical, but often misunderstood, to provide both pollen and nectar to pollinators	\$3.15
F1174	Cottage Garden Flower Seed Mix Approx 200 seeds per pack	This mix has been carefully hand-selected for both annual and perennial flowers, bringing back the glorious cottage garden flower shows of yesteryears gardens with these old-fashioned and heirloom varieties. We've worked closely with our flower seed growers in choosing these particular flowers which thrive and impress in all climates and soil conditions across the USA. From the humid Southeast to the arid Southwest, the cold winters and glorious summers of the Northeast to the scorching summers of the Midwest and cool, damp springs of the Northwest, these varieties will do well for you and your garden.	\$3.15
F1175	Children's Garden Flower Seed Mix Approx 200 seeds per pack	Gardening with kids is a great way to get them interested in nature. Children are naturally inquisitive and learning how to garden sparks their curiosity even more. They love watching plants grow and it's a great learning experience for everyone. Patience, stillness and observation are just a few of the skills children learn from growing a flower garden. They experience the cycle of the year in a new way, seeing changing seasons from a different perspective. This mix of easy to grow, colorful annual flowers, sets the stage for learning and wonder for a child. The different colors, shapes and sizes attracts and engages children young and old! As the flowers bloom and bring in bees, butterflies, dragonflies and other pollinators a whole new cycle of learning begins.	\$3.15
F1176	Edible Flower Seed Mix Approx 200 seeds per pack	A colorful and tasty blend of annual and perennial flowers which are all edible. The culinary world is in love with edible flowers, from nationally renowned chefs to home cooks finding the flavors and colors delightful. Everything from salads to desserts look spectacular all summer long and into early fall. Our mix has flowers perfect for garnishing your favorite dishes, adding color and interest along with bringing beauty and color to your garden or landscape with the multitude of colorful blooms! Add this fragrant, colorful and flavorful addition to your garden and kitchen and you'll never lack for unique, dazzling colors and flavors or the guests to share them with!	\$3.15

Stock #	Product Name	Description	Price
F1177	Sunburst Ground Cover Flower Seed Mix Approx 200 seeds per pack	This mix gives you a splash of color wherever you need it. This annual mix will re-seed itself, filling in the space it;s planted in. Specially selected with flowers that thrive in a wide range of climates. Fill in and beautify those awkward spaces you don't quite know what to do with this mix. It grows a carpet of brilliant flowers in sunny hues about a foot tall. Brighten a darker area or use it to attract and direct the eye into taller flowers or landscaping. Its low growth habitat isn't intrusive or demanding and attracts pollinators of all colors. One seed packet will plant approximately 16 square feet a 4x4 foot space. Planting is simple rake bed and scatter seeds, then lightly rake to just barely cover seeds. Best times to plant are late fall or early spring.	\$3.15
F1178	Cut & Come Again Zinnia Seed Mix - (Zinnia elegans) Approx 50 seeds per pack	Includes pink, purple, orange, red, white and yellow flowers that are 1 - 1 ½ inch wide and are semi-double to fully double. Zinnias excel as cut flowers as their rigid stems hold long-lasting blossoms that retain their petals. They have been a colorful feature in home gardens for many decades. Kids love them for their quick germination, easy growth and rewarding colors. One of the best flowers that smart gardeners can put to work in their gardens. Zinnias are one of the easiest growing and hardest working flowers around. Plant in warm, rich soil with lots of sun and you'll have seedlings in days with flowers just a few weeks later.	\$3.15
F1179	Native Flower Seed Mix for Monarchs Approx 200 seeds per pack	Monarch populations have severely declined over the past several years, and the loss of milkweed plants and nectar sources has been a major contributor. Insect pollination is essential in roughly 35% of the world's crops. This seed mix has both native wildflowers and milkweeds to supply nectar food sources and host plants for the Monarch butterfly. Other butterflies will use the flower nectar, but only the Monarchs use milkweed as a host plant. Both male and female Monarchs have different nectar needs but will often converge where there are host plants. This mix is ideal for planting in the Monarch's summer breeding range and flyway zones of the United States.	\$3.35
F1180	Marigold Nematode Control Seed Mix - (Tagetes patula) Approx 100 seeds per pack	For effective control of root knot and other plant-parasitic nematodes in the home garden. In India, marigolds have been used for this purpose for hundreds of years. These charming, bright and easy growing flowers bloom all summer long while working hard just underneath the soil improving the fertility and reducing destructive inhabitants. Marigold roots release the chemical alpha-terthienyl, one of the strongest naturally occurring compounds and is nematocidal, insecticidal and antiviral. This naturally released chemical inhibits the hatching of nematode eggs. This process is called allelopathy - the ability of an organism to produce chemicals that are toxic to other organisms. The most effective treatment is planting marigolds as a cover crop prior to planting the garden. Interplanting or companion planting can work with lighter nematode pressures.	\$3.15
F1181	Red Corn Poppy Seeds - (Papaver rhoeas) Approx 200 seeds per pack	The Red Corn Poppy, also called Flanders poppy, corn rose, field poppy or common poppy is a very old native of Europe, growing in areas of disturbed soil. Since early recorded times it has been closely linked as an old symbol of agricultural fertility in Europe, signifying death and rebirth as the blooms spring forth in spring with their exuberant bright red colors.	\$3.15
F1182	Mammoth Grey Stripe Sunflower Seeds - (Helianthus annuus) Approx 50 seeds per pack	This sunflower is grown for its edible seeds. Huge single flowers 10-12" wide grow on 10-12' stalks. Makes an excellent background plant for your garden, providing a valuable seed crop for songbirds and a tasty snack for people.	\$3.15
	Basil Approx 100 seeds per pack	<h2>Herbs</h2>	
H1063	Basil Mix Seeds - (Ocimum basilicum)	Basil Mix A wonderful hand selected mix of our favorite culinary basil varieties. This cornucopia makes a great addition to your herb garden! Plant seeds with some space to get the most growth out of the different varieties.	\$3.15
H1001	Genovese Basil Seeds - (Ocimum basilicum)	A prized choice for pesto and sauces, producing generous quantities of choice, incredibly aromatic, flavorful and extremely tender leaves. This basil originated in Italy and is considered to be the absolute best for pesto. In fact, it is so highly regarded that in Europe the classic Pesto alla Genovese can only be made with Genovese basil, which has been recognized as a protected variety. Yields 7 - 8 cuttings per season and re-grows very quickly. Slightly smaller leaves than Sweet Basil, but much more flavor and aroma.	\$3.15

Stock #	Product Name	Description	Price
H1067	Himalayan/Clove/Tree Basil Seeds - ( <i>Ocimum gratissimum</i> )	Tall light green extremely fragrant basil with clove scented leaves. It is valued for its lime green leaves which are up to 4 inches long with leafy tops, which are used widely for seasoning soups, stews and sauces. The leaves of the clove basil are used to keep away mosquitoes by burning and crushing for the aroma. Useful in treating chest problems such as coughs or bronchitis. It can ease stomach cramps and pain. Makes a wonderful tea.	\$3.15
H1003	Holy Basil Seeds - ( <i>Ocimum sanctum</i> )	A native herb in India with sweetly fragrant, clove-like flavor, where it is known as Tulsi. It is sacred in the Hindu religious tradition and is regarded as one of the most important plants used in Ayurvedic medicine. You will see holy basil growing in profusion around Hindu temples in India. Uses The aromatic leaves can be used in salads, cooking, herb butters or tea. Also repels mosquitoes. Growing Tip When basil starts to flower, it will stop growing leaves so pinch the flower heads off to encourage new leaf growth.	\$3.15
H1069	Lemon Basil Seeds - ( <i>Ocimum basilicum</i> var. <i>citriodorum</i> )	A wonderfully fresh sweet lemony/citrus fragrance with high essential oil content. Aromatic white flowers with clove flavored nectar and light green leaves that love the heat. Delicious in mild sauces, with chicken, grilled fish or seafood; yet will work well with meats. Makes an intriguing and unique pesto. Stocks, sauces and stews benefit greatly from a "bouquet garni" that includes Lemon Basil.	\$3.15
H1005	Lime Basil Seeds - ( <i>Ocimum americanum</i> )	A rare and tasty heirloom that combines the flavor of basil with lime. Perfumed, light green leaves grow on compact, mounding plants. Works wonders with vinegar, fish, poultry, salad dressings, sauces and oils. Adds a delightful zing in salads! Unique but perfect addition to desserts.	\$3.15
H1006	Magical Michael Basil Seeds - ( <i>Ocimum basilicum</i> )	An Incredible fragrance from a compact, ornamental bush making this basil a bee magnet. Lush aromatic, green leaves are rich in essential oils for cooking with lots of cream-white blossoms. Young leaves are great for cooking and the small flowers are attractive for use as a garnish, adding color to any salad since the calices are purple and corollas white.	\$3.35
H1007	Marseilles Basil Seeds - ( <i>Ocimum basilicum</i> )	Marseilles basil is a dwarf, compact variety loaded with full sized leaves. Hundreds of medium-sized, very aromatic leaves with that classic deep rich basil flavor. Never bitter. Marseilles is the traditional basil used in pistou, the Provenal version of pesto. It's considered by some to be the very best basil in France, certainly the best strain of bush basil.	\$3.35
H1084	Napolentano Bolloso Basil Seeds - ( <i>Ocimum basilicum</i> )	Super large lettuce leaf basil from Naples. This Genovese-type basil has leaves up to 4" long. Plants grow 18-24" tall and are slow to bolt. A few leaves can quickly make a nice pesto.	\$3.15
H1110	Purple Dark Opal Basil Seeds - ( <i>Ocimum basilicum</i> )	A unique sweet basil cultivar, developed at the University of Connecticut in the 1950s and a 1962 AAS award winner having regal, purple-black glossy foliage and pale pink flowers with a delicious light anise or licorice aroma. It has the flavor profile to back up it gorgeous looks! The beautiful deep purple leaves have an almost metallic green underside and get darker as the plant matures, making this a striking ornamental and culinary plant in gardens, pots or along borders. A steady grower, it produces small to medium sized leaves and grows 12 - 18" tall and is slow to bolt.	\$3.15
H1112	Sweet Basil Seeds - ( <i>Ocimum basilicum</i> )	The most loved traditional Italian variety for cooking with a rich, hearty taste that is treasured in pasta sauces. Also used in pesto, along with the Genovese variety. One of the three ingredients in the traditional Margherita pizza. Aromatic and delightful with a heady scent, it can easily become habit-forming in the warmer months in salads, sauces, egg dishes and appetizers. A fast growing, prolific producer with large, thick, aromatic leaves it does well in hot weather and can be harvested several times until the weather turns cool.	\$3.15
H1023	Anise Hyssop Seeds - ( <i>Agastache foeniculum</i> ) Approx 300 seeds per pack	Has showy lavender flowers with a lively licorice flavor for salads, fruit dishes, baked goods. Extra-sweet, anise-flavored leaves make soothing teas to settle upset stomachs. Attracts butterflies and bees. Its aromatic properties were known to the North American Indians, who used the leaves as a cough medicine. It has also been a popular bee plant, yielding a fine, mildly anise-tasting honey.	\$3.15
H1092	Anise Seeds - ( <i>Pimpinella anisum</i> ) Approx 100 seeds per pack	The captivating aromas and flavors of Italian biscotti are partly from the anise seeds used in its recipe. The delicately sweet and aromatic bouquet with a distinctive licorice flavor has been treasured for centuries. In fact, anise is one of the classic herbs used throughout history. Anise is a delicate looking annual herb that develops feathery leaves as it matures. Growing from 18 - 24 inches tall, its first leaves are fairly large and wide while the secondary leaves further up are more fine and feathery. Small white flowers grow in groups at the top, called umbels, that mature into the familiar small, grayish-brown fruits that are commonly called seeds. Anise is easy to grow and do best in light, fertile, well-drained soil. The seeds should be planted as soon as the ground warms up in spring. Because the plants have a taproot, they do not transplant well after being established, so they should be started in their final location.	\$3.15

Stock #	Product Name	Description	Price
H1081	Black Seed Sesame Seeds - (Sesamum indicum) Approx 100 seeds per pack	Growing one of the oldest condiments known to man is not only easy, it's fun and delicious! Highly valued for its oil, this small but very powerful seed is also loved as a food and condiment. Add in the soil improvement abilities and you've got a winner in your garden. Details Sesame is a strong, slender annual growing to about 3 - 6 feet tall with slender, dark-green leaves and inch-long trumpet-shaped pale pink to light purple flowers which flow along its square stem. Can be grown in cooler climates, but seed production only happens with 90 - 120 days of warm weather.	\$3.15
H1011	Borage Seeds - (Borago officinalis) Approx 40 seeds per pack	Borage is a beautiful plant to have in your garden or as a potted plant. Borage makes an excellent companion plant strengthening the resistance to insects and diseases of nearby plants. A garden without Borage is like a heart without courage.	\$3.15
H1105	Brown Seed Sesame Seeds - (Sesamum indicum) Approx 100 seeds per pack	High in protein and oil, as well as vitamins and minerals, due to the deep root structure making it an excellent whole food for the home gardener or small scale farmer. It is easy to grow with significant heat, drought, disease and insect resistance for crops in arid or marginal areas, or as a back-up or emergency crop in case the main food crops fail. An annual herb grown for its edible seeds in long pods. Tropical and heat loving, it thrives wherever cotton can be raised. Dried seeds taste nutty; their flavor is dramatically increased by toasting. Seeds are dry roasted and used whole in cooking or ground and used as a paste for flavor.	\$3.15
H1013	Catnip Seeds - (Nepeta cataria) Approx 100 seeds per pack	More than Just for Cats Catnip, also called cat mint, is a powerfully fragrant plant whose little clusters of white spotted-lavender flowers have been cultivated for centuries for medical purposes.	\$3.15
H1015	Cherokee Sweet Mint/Hoary Mountainmint Seeds - (Pycnanthemum incanum) Approx 50 seeds per pack	Also known as Hoary Mountainmint is an easy growing native perennial wildflower with a distinctive, minty/herbal scent. All parts of the plant emit a strong, spearmint-like aroma when crushed. Throngs of desirable pollinators flock to the dense head-like flowers, making this a pollinator paradise.	\$3.55
H1017	Clary Sage Seeds - (Salvia sclarea) Approx 35 seeds per pack	Native of southern Europe and Syria, Clary Sage has been used medicinally and as a flavoring for beverages. Details Soft, woolly heart shaped leaves with lilac, pale blue, pink or white flowers form in whorls on top of the stems, with the upper lip curled up. Flowers smell sharply of pine and grapefruit. Forms 10-12" rosettes in the first year, tall flower spikes the second.	\$3.35
H1099	Common/Culinary/Garden Sage Seeds - (Salvia officinalis) Approx 50 seeds per pack	Is a small fragrant perennial evergreen shrub with woody stems, grayish leaves, blue to purplish flowers and grows to about 2 ft both tall and wide. Also known as Garden sage, Common sage, and Broadleaf sage. Details Garden sage is one of the easiest herbs to grow, as it is hardy to both cold and heat.	\$3.15
H1051	Creeping Thyme Seeds - (Thymus serpyllum) Approx 200 seeds per pack	Resilient and reliable hardy, soft ornamental used for paths, rock gardens, or containers. Details Thick, spreading, ground cover with rosy pink flowers and oblong leaves with a lemony scent. One of the best growing, most versatile ground covers, stands up to being walked on, and has herbal uses. Once established, is very drought tolerant, stems root easily. Uses Try in teas, salads, rice, fish, vegetable and egg dishes. Leaves can be picked anytime to use fresh. Thyme honey is a sweetener for expectorant herbs teas and is used externally to heal sore skin. Antiseptic, expectorant, and calming thyme tea treats hangovers, cough spasms, flu and sore throats.	\$3.35
H1115	Crystalline Iceplant Seeds - (Mesembryanthemum crystallinum) Approx 200 seeds per pack	This is the new pop-star of the gourmet chef world. Used as an edible garnish for anything from steak tartare to sushi. The uses of the edible flowers and succulent leaves are only limited by your imagination.	\$3.50
H1085	Culantro Seeds - (Eryngium foetidum) Approx 200 seeds per pack	Also called long coriander or Mexican coriander, it is often mistaken for its close relative Cilantro or coriander, the dried cilantro seeds.	\$3.15
H1090	Cumin Seeds - (Cuminum cyminum) Approx 100 seeds per pack	A member of the carrot family, cumin has a long history dating back to the Persians, Egyptians and Hebrews. This small annual herb has slender, dark green leaves that are divided into narrow segments with white or pinkish flowers. The fruits are commonly called seeds and are narrow, greenish or gray-brown.	\$3.15
H1018	Dukat Dill Seeds - (Anethum graveolens) Approx 100 seeds per pack	Aromatic annual has blue-green, threadlike foliage and umbels of summer flowers, followed by heads of oval seeds. Details Outstanding production of large, lush foliage. Bred for its sweetly aromatic essential oil content. Has a wonderfully mellow, never bitter flavor for culinary uses. Dill also attracts beneficial insects like hover flies, ladybugs and bees, which keep the aphid population to a minimum while helping pollinate the rest of the garden. Easily self-seeds.	\$3.35

Stock #	Product Name	Description	Price
H1108	Dulce Buttons / Aztec Sweet Herb Seeds - (Lippia dulcis) Approx 100 seeds per pack	Known by the Aztec as Tzonpelic xihuitl, which literally means "sweet herb". The tiny white buds are super sweet with a background flavor of mint, thyme, anise or licorice, but leaving no aftertaste like Stevia. Dulce Buttons is also known as Aztec Sweet Herb, Bushy Lippia, Honeyherb or Hierba Dulce.	\$3.55
H1058	East Indian Lemongrass Seeds - (Cymbopogon flexuosus) Approx 50 seeds per pack	This aromatic grass has clumped, bulbous stems becoming leaf blades widely used in Thai cuisine, with a distinct lemon flavor. A densely tufted perennial with thick stems, lemongrass grows readily in almost any soil. This tropical perennial can be grown as an annual, or dug up and overwintered indoors.	\$3.35
H1027	English Lavender Seeds - (Lavandula angustifolia) Approx 50 seeds per pack	Abundant, grey-green spikes tipped with sweet-scented, blue/mauve flowers. This is a hardy dwarf strain growing to about 14" with good cold-hardiness and longevity. Lavender angustifolia is one of the richest in essential oils, meaning more fragrance power both fresh and dried.	\$3.55
H1070	English Pennyroyal Seeds - (Mentha pulegium) Approx 40 seeds per pack	Low spreading perennial herb, butterfly attractant and fragrant ground-cover. Only the lavender colored blossom stalk rises above the ground. It is also known as Mosquito Plant, Squaw Balm, Squawmint and Tickweed. It is one of the few mint family members that will grow easily from seed.	\$3.15
H1094	English Thyme Seeds - (Thymus vulgaris) Approx 100 seeds per pack	Thyme is a great garden plant with a neat habit, fragrant foliage, and colorful flowers. It is an ideal edging plant and is a good choice for a windowsill herb. Also known as German thyme and garden thyme. Details Thyme with its grey-green leaves and pink or violet flowers grows 8-10' tall. Harvest thyme just before flowers begin to open by drying the entire plant.	\$3.15
H1089	Epazote Seeds - (Chenopodium ambrosioides) Approx 100 seeds per pack	This annual Mexican herb has a pungent aroma, spear-shaped, deeply toothed leaves and green flowers. It is also known as Wormseed, American Wormseed, Mexican Tea or Herba Sancti Mariae. Epazote's fragrance is strong and pungent. It has been compared to citrus, petroleum, savory, mint or camphor. We have nick-named it the "diesel leaf plant" in our garden. It smells pretty strong, but we have found that it does add a wonderful depth of flavor to a pot of beans!	\$3.15
H1019	Fernleaf Dill Seeds - (Anethum graveolens) Approx 100 seeds per pack	Fernleaf dill is a dwarf variety especially good for containers, perfect for the kitchen windowsill. This extended-season, versatile dill is a slow-bolting, space-saving variety that produces large quantities of dill weed.	\$3.15
H1062	Feverfew Seeds - (Chrysanthemum parthenium) Approx 100 seeds per pack	Very aromatic herb that has medium to yellow-green leaves with long lasting small, white, daisy-like flowers. Details A hardy plant, feverfew needs little attention. Feverfew is propagated several ways, by seed, by root division, and by cuttings. At first glance it bears a striking resemblance to chamomile. Like chamomile, feverfew produces masses of bloom, but in sprays rather than individual flowers. The whole plant, even the tiny seeds has a medicinal, though no unpleasant scent.	\$3.15
H1022	Fireweed Seeds - (Epilobium angustifolium) Approx 50 seeds per pack	A native wildflower with showy pink to purple flowers in long, dense clusters blooming late summer. Early colonizer of burned, disturbed areas, was one of the first plants to appear in bomb sites during the London Blitz of World War II, and at Mt. St. Helen's after its' eruption.	\$3.15
H1079	Flat Leaf Parsley Seeds - (Petroselinum crispum var. latifolium) Approx 100 seeds per pack	Medium serrated leaves with crisp, pointed tips and a rich, bold pronounced flavor. Details Parsley is used fresh and is almost picked daily during the summer months. It is a biennial but can be planted and grown as an annual for the freshest flavors.	\$3.15
H1097	French Parsley/Curly Chervil Seeds - (Anthriscus cerefolium) Approx 100 seeds per pack	Regarded as the foundation of the Fines Herbes, which is based on fresh parsley, chives, tarragon and chervil. Details Growing about a foot tall, the curly leaves resemble those of parsley but are lighter green and more finely cut. The small, white flowers are borne in umbels with seeds that are black with a long projection at one end. Needs a moderately rich soil, well watered, good drainage, and a partly sunny situation. Will grow and bolt quickly, especially in warm weather, so succession planting will keep a fresh supply on hand. Fresh has the best flavor and aroma. The curly cultivar is more easily grown, earlier, more productive with more vigorous growth than the common type.	\$3.15
H1064	French Sorrel Seeds - (Rumex scutatus) Approx 100 seeds per pack	Considered by many chefs to be the benchmark variety and is an indispensable green in French cooking. When a farmer became thirsty during spring planting, he would reach down, pluck up some wild sorrel, and eat it. The sour-citrus taste has been prized throughout the world for thousands of years as a wake-up call for taste buds dulled by bland winter foods. A low-growing perennial about 18" tall, up to 2' wide. Flowers are small and green, which turn reddish-brown later. Leaves are green, shield-shaped and more succulent and acidic than garden sorrel, have a pronounced lemon taste.	\$3.15

Stock #	Product Name	Description	Price
H1066	Garlic Chive Seeds - ( <i>Allium tuberosum</i> ) Approx 250 seeds per pack	Chives are perennial in all but the coldest climates. An excellent low maintenance crop offering loads of flavor for almost no work. The young leaves and flower buds have a delicate chive-like flavor with sweet, roasted garlic overtones. Also known as Chinese Chives or Chinese Leeks.	\$3.35
H1093	German Chamomile Seeds - ( <i>Matricaria recutita</i> ) Approx 150 seeds per pack	The tiny daisy-like flowers have a strong, aromatic smell, and bloom in early to mid summer. They have white collars circling raised, cone-shaped, yellow centers and are less than an inch wide, growing on long, thin, light green stems up to 3' tall. Also known as wild chamomile, Hungarian chamomile, pineapple weed and scented mayweed.	\$3.15
H1037	Giant of Italy Parsley Seeds - ( <i>Petroselinum crispum</i> var. <i>latifolium</i> ) Approx 100 seeds per pack	Huge, dark green flat leaves with full potency and a sweet, fresh flavor add oomph to dishes from almost every cuisine: potatoes, vegetables, salads, soups, stews, egg dishes - and as a garnish. Fresh or dried, it is the gourmet choice. Superior choice for flavor. Details Parsley is used fresh and is almost picked daily during the summer months. It is a biennial but can be planted and grown as an annual for the freshest flavors.	\$3.15
H1080	Hamburg Root Parsley Seeds - ( <i>Petroselinum crispum</i> var. <i>tuberosum</i> ) Approx 100 seeds per pack	Unusual Old World parsley with a tender, edible 8-10" long tuber; up to 2" diameter root. Very similar to parsnip. The thick, fleshy, creamy-white roots taste like a combination of celery and parsley with a nutty flavor.	\$3.15
H1025	Joe Pye Weed Seeds - ( <i>Eupatorium maculatum</i> ) Approx 100 seeds per pack	An amazing plant that is a native herb, a wildflower, a butterfly plant and an ornamental for the flower and vegetable garden. Composite, rose-purple flowers have a vanilla-like scent. In danger of extinction in the wild, direct sow outdoors in fall. This serious butterfly magnet blooms July through September or until a hard frost. Often growing to 7' tall with moderate, sustained soil moisture. Most comfortable towards the back or along visual borders in the garden where it won't crowd out the shorter plants.	\$3.15
H1065	Lemon Balm Seeds - ( <i>Melissa officinalis</i> ) Approx 50 seeds per pack	Known because the crushed leaves smell strongly of lemons, has a very long history of use as a healing herb, an insect repellent and as a culinary herb. Lemon Balm is very attractive to bees and other pollinators and its scientific name is a derivation of the Greek word for bee.	\$3.35
H1028	Lemon Bee Balm Seeds - ( <i>Monarda citriodora</i> ) Approx 100 seeds per pack	Long flowering native annual wildflower with unusually fragrant, curved, tubular flowers in purple to pink. Attracts multitudes of hummingbirds and butterflies. Details This annual species is native to North America and grows wild in the Appalachian Mountains. Its curved tubular flowers are scented and usually white, pink, or purplish. The flower heads are stacked on top of one another, two to four of them on each stem, with the largest at the bottom, making a spectacular show. Plants are conversation pieces in the garden; dried seed heads are distinct in everlasting floral arrangements. Easy to grow. In warmer areas it will self-seed in the fall. In the Northeast, seeds may germinate outside in the spring from last year's plant.	\$3.15
H1103	Licorice Seeds - ( <i>Glycyrrhiza glabra</i> ) Approx 30 seeds per pack	A perennial herb having a network of woody rhizomes and erect stems with pale purple or white flowers. Plants are ready for harvesting after 3-5 years, the entire plant is dug up and the rhizomes are cut and washed.	\$3.55
H1029	Lime Balm Seeds - ( <i>Melissa officinalis</i> 'Lime') Approx 250 seeds per pack	Has bright green leaves, a strong lime scent and flavor. A different strain than Lemon Balm with a distinct Lime flavor. Sweet fragrance is irresistible to children, gardeners and bees. Easy to grow and drought tolerant, this mint relative is best grown in containers if spreading is not wanted. Commonly grown herbal household remedy with a long tradition as a tonic that raises the spirits and lifts the heart.	\$3.35
H1087	Lovage Seeds - ( <i>Levisticum officinale</i> ) Approx 100 seeds per pack	Large, dark green, celery-scented leaves and hollow stems with umbels of greenish yellow flowers appear from mid to late summer. Very prolific, usually only one plant is needed to supply a family with seasonings and leaves. Grows just about anywhere except very dry and sunny spots. Needs very fertile soil for best production, aroma and flavor. Amend soil with rich compost or liquid fish emulsion.	\$3.15
H1076	Mariska Dill Seeds - ( <i>Anethum graveolens</i> ) Approx 100 seeds per pack	Little known but hardy and compact variety with high essential oils and a pungent aroma. It is a great dill for the kitchen garden, windowsill or containers. It originated in the Rostov region near the Caspian Sea. Uses Uniquely flavored, Dill offers culinary seeds and leaves.	\$3.15
H1047	Mexican Marigold/Mexican Tarragon Seeds - ( <i>Tagetes lucida</i> ) Approx 35 seeds per pack	Sweet, licorice-flavored leaves and flowers are a gentle, golden-yellow; bloom all summer and can be dried for a delicious tea. Leaves are a substitute for French Tarragon and thrive in warm areas where tarragon does not grow.	\$3.15
H1032	Navajo/Hopi Tea (Greenthread) Seeds - ( <i>Thelesperma filifolium</i> ) Approx 100 seeds per pack	Coreopsis-like, blooms stand out like radiant, yellow beams, June through September. Revered since Ancient Puebloan times, the slightly smoky, jasmine-scented drink from stems and leaves is one of the best wild, herb teas.	\$3.55

Stock #	Product Name	Description	Price
H1033	Nutmeg Flower/Black Cumin Seeds - ( <i>Nigella sativa</i> ) Approx 50 seeds per pack	Lovely, fringed, double, white or blue blossoms are followed by unusual seed pods which can be dried and used as an ornament in flower arrangements.	\$3.35
H1052	Orange Scented Thyme Seeds - ( <i>Thymus fragrantissimus</i> ) Approx 40 seeds per pack	Flavor of Old English Thyme with a refreshing orange-mint fragrance and pale pink flowers that attract bees. Grows short and compact to 4' tall and 12" across. Useful for edging, around paving stones, also nice in containers. Cut it back if it gets shabby, it re-grows quickly.	\$3.55
H1036	Papalo/Quilquina Seeds - ( <i>Porophyllum ruderale</i> ssp. <i>macrocephalum</i> ) Approx 40-50 seeds per pack	Papaloquelite is a fabulous ancient Mexican herb. The name comes from the word papalotl, Nahuatl for butterfly. Unusual, piquant, fresh green leaves have a marvelously complex, distinctive flavor - like cilantro on steroids! Does not bolt in summer like Cilantro. The herb must be used fresh as it does not dry well, and is never cooked.	\$4.25
H1100	Purple Coneflower Echinacea Seeds - ( <i>Echinacea purpurea</i> ) Approx 100 seeds per pack	A native perennial to eastern and central North America, where they grow in moist to dry prairies and open wooded areas. Well adapted to almost any growing situation. Details Usually 2 - 3' tall, the single flower heads have purple petals and a raised, spiny center cone that is actually the seed head with sharp spines that resemble a stiff comb. One of the very best butterfly attractants, it thrives in full sun or light shade and blooms heavily from July through September. Tolerates clay soils but thrives in well-drained soils. Tolerates both heat and drought. Coneflowers repel deer they aren't very attracted to the taste or prickly heads.	\$3.15
H1088	Rampion Seeds - ( <i>Campanula rapunculus</i> ) Approx 100 seeds per pack	This is one of the earliest wild edibles to emerge in spring. They have a mildly sweet flavor reminiscent of garlic, onions or leeks. Please note these are not the North American wild onions also known as ramps - <i>Allium tricoccum</i> that do not grow well from seeds and are almost endangered due to over-harvesting.	\$3.15
H1106	Red Shiso, Perilla Seeds - ( <i>Perilla frutescens</i> var. <i>crispa</i> ) Approx 100 seeds per pack	An ancient edible and medicinal herb native to E. Asia. Also known as Beefsteak plant, Perilla and Wild basil. Details An erect, annual herb from the mint family that grows 12" to 6' tall with purple or green stems with four parallel grooves, blooms August to October. Uses The bright red/purple leaves have a pleasant sweet ginger taste with a cinnamon like scent and are used as a spice, potherb or fried and combined with fish, rice, vegetables and soups.	\$3.15
H1000	Rock Thyme Seeds - ( <i>Acinos alpinus</i> ) Approx 50 seeds per pack	The plant has dense, cushiony mats of wide spreading, deep evergreen foliage made of masses of tiny green leaves. The compact, low growing mounds sport clusters of very attractive, dainty bright pink to purple flowers which bloom June to October. The petite round leaves remain green all summer. Beautiful, edible, hardy ground-cover that's seldom seen, but easy-to-grow perennial that does well in poor soils. Also known as Alpine Calamint. Uses Both a landscape and culinary plant, rock thyme is a low maintenance perennial ground cover with a fine texture that excels in attracting bees and butterflies to the masses of flowers it puts out. This alpine variety has leaves which are succulent in cooked dishes and also make a delicious tea.	\$3.55
H1014	Roman Chamomile Seeds - ( <i>Chamaemelum nobile</i> ) Approx 200 seeds per pack	Small, hardy, sour apple scented, feathery foliage and small, free-blooming daisies bloom July to September. This is a traditional ground cover in English gardens and pathways where it is cut like grass. Growing it between bricks or along paths allows it to release its scent when brushed. Also called English Chamomile.	\$3.15
H1068	Romanesco Fennel Seeds - ( <i>Foeniculum vulgare</i> ) Approx 200 seeds per pack	Traditional Italian herb with a wonderful anise taste. It is also called Roman or Florence Fennel. Details Very sweet and aromatic late maturing variety produces a large head with thick white tightly wrapped stalks. Almost always grown as an annual, this aromatic perennial grows to about five feet in height, having long, fine, dark green, feathery leaves, umbels of yellow flowers, and small, ridged, oval-shaped fruits, usually called seeds, which are gathered in the autumn. Growing fennel for seeds is a biennial process, as the fruit or seeds only set in the second year. The tall stalk looks like celery and is often consumed as a vegetable, while the leaves and seeds are used to flavor foods. Although the taste and aroma of fennel are sometimes mistaken for anise or licorice, the plant is actually related to caraway.	\$3.15
H1055	Root Beer Hyssop Seeds - ( <i>Agastache rupestris</i> ) Approx 25 seeds per pack	Brushing against the lavender buds, salmon-orange flowers or delicate blue-green foliage leaves a lingering rich root-beer aroma. This native plant is an exotic contribution to herb gardens and perennial borders that blooms all summer the first year and is drought tolerant, hardy and easy-growing.	\$4.00
H1074	Rosemary Seeds - ( <i>Rosmarinus officinalis</i> ) Approx 100 seeds per pack	Rosemary is a dense, evergreen, aromatic shrub with resinous, needle-like leaves, and soft, blue, pollen-rich spring flowers loved by bees. Semi drought tolerant and used in landscaping and culinary gardens alike. Easy to grow and very pest resistant.	\$4.00

Stock #	Product Name	Description	Price
H1045	Salad Burnet Seeds - ( <i>Sanguisorba minor</i> ) Approx 100 seeds per pack	Perennial herb with a stout creeping rhizome, tufts of graceful pinnate foliage, and slender stems with spheres of red-tipped green blooms that appear in early summer. An Italian proverb says "The salad is neither good nor good-looking when there is no burnet."	\$3.15
H1050	Scarlet Sage Seeds - ( <i>Salvia coccinea</i> ) Approx 200 seeds per pack	Legendarily hypnotic to hummingbirds, the tall spikes of these vivid-red tubular flowers are a prime source of nectar for bees and butterflies too. Scarlet Sage is a deer resistant wildflower that will tolerate salty soil and loves heat. Blooms appear continuously from early summer to first frost. 24-36" tall.	\$3.15
H1046	Sculpit /Stridolo Seeds - ( <i>Silene inflata</i> ) Approx 100 seeds per pack	Fast-growing, mild-mannered annual blending complex flavors of Chicory, Arugula, Tarragon and other favorite greens. It's milder than that would suggest, with a flavor all its own. Found on the edge of crop fields and in forests and mountain pastures in its native Italy.	\$3.15
H1107	Sheep Sorrel Seeds - ( <i>Rumex acetosella</i> ) Approx 100 seeds per pack	A slender plant with leaves 1/2 to 3/4 inch long and arrowhead shaped, it grows best in pastures and drier soils, unlike French Sorrel that needs regular moisture. With cooler weather the plant is tinged with a red coloring. The flowers are yellow-orange for the male and red-orange for the females on long stalks and produce very small triangular seed pods.	\$3.15
H1016	Slow Bolting Cilantro Seeds - ( <i>Coriandrum sativum</i> ) Approx 100 seeds per pack	Few things awaken the taste buds and senses faster than the aroma of freshly harvested, home-grown cilantro. Mouth-watering visions of salsa usually dance in the mind soon after the scent of cilantro crosses the nose. Whether you use the fresh leaves in salsa, guacamole, with fish, or in other ethnic dishes; cilantro leaves are an easy-growing ingredient in delicious recipes. Cilantro's usefulness doesn't stop there; the dried seeds (technically called fruits) are coriander, another well-known and loved spice for Asian, Indian and Mexican cuisines.	\$3.15
H1048	Stevia / Sweet Herb Seeds - ( <i>Stevia rebaudiana</i> ) Approx 75 seeds per packet	Stevia is a tropical annual with very sweet leaves that yield the substance 'stevioside'. Leaves are 100-300 times sweeter than table sugar, have virtually no calories and are not broken down by heat.	\$4.50
H1077	Stinging Nettle Seeds - ( <i>Urtica dioica</i> ) Approx 125 seeds per pack	Leaves are heart-shaped, finely toothed, and tapered at the ends, with yellow or pink flowers. Stems reach 1 - 2' in height. The entire plant is covered with tiny stiff hairs, mostly on the underside of the leaves and stem, that release stinging chemicals when touched. Uses Young leaves and shoots, are rich in vitamins and minerals, are cooked as greens with a flavor similar to spinach mixed with cucumber. Also brewed for beer or made into a tea. The plant is diuretic, digestive, and astringent, stimulates circulation, and clears uric acid, relieving arthritis, gout and eczema.	\$3.15
H1073	Summer Savory Seeds - ( <i>Satureja hortensis</i> ) Approx 50 seeds per pack	This aromatic annual has lilac to white tubular flowers that bloom July- September, with very slender bronze green leaves. Details Savory is fast growing reaching about 12-18" tall and is best sown directly outside. Harvesting can begin as soon as the plants are 6" high and may continue all summer. Best to harvest before the plant flowers.	\$3.15
H1072	Sweet Marjoram Seeds - ( <i>Origanum majorana</i> ) Approx 50 seeds per pack	Leaves have a sweeter, spicier taste than the leaves of oregano. It is a popular culinary herb used in salads, sauces, cheese and in liqueurs, and as part of herbes de Provence. Details An ancient shrubby tender perennial that grows to about 1' tall with wiry, red-brown stems and downy aromatic gray-green leaves, with tiny white flowers on clustered spikes in summer. Easy to grow either outside or in pots. Use fresh leaves throughout the growing season, main harvest is just before it flowers when the color and flavor is at its peak. Wonderfully aromatic mild oregano flavor with a hint of balsam.	\$3.15
H1082	Tansy Seeds - ( <i>Tanacetum vulgare</i> ) Approx 100 seeds per pack	Finely divided compound leaves on stout, somewhat reddish smooth stems, with yellow, button-like flowers. Scent is camphor pungent with rosemary undertones. Heat and drought tolerant, but does well in poor, cold soils.	\$3.15
H1049	Tarahumara Chia Seeds - ( <i>Salvia tiliifolia</i> ) Approx 100 seeds per pack	Spikes of small, vibrant blue flowers bloom in summer. Chia was the basic survival ration of Aztec warriors. In Mexico, the seeds are still roasted, ground and added to water, forming a gel, one tablespoon of which is said to sustain a person's energy level for 24 hours. A great pollinator attractant because of its beautiful flowers when it blooms.	\$3.15
H1053	Toothache Plant / Szechuan Buttons / Electric Daisy Seeds - ( <i>Spilanthes oleracea</i> ) Approx 30 seeds per pack	A low-growing plant with bronze-purple leaves host yellow/red "gumdrop" flowers that bloom repeatedly summer through fall. Attractive annual ground-cover that's edible. The young leaves have a slight peppery taste when added to salads. Hard to find and a conversation piece. The leaves and flower heads, particularly the young buds, contain a natural analgesic which numbs the tongue and gums.	\$3.55

Stock #	Product Name	Description	Price
H1035	True Greek Oregano Seeds - (Origanum heracleoticum) Approx 150 seeds per pack	Dark green leaves and white flowers exude that bold, unmistakable aroma. Always sweetly aromatic and flavorful, one whiff or taste of fresh oregano will immediately make you wonder why you put up with the bland dried commercial stuff for so long. Easy to start from seed, may take a bit of time to get established but will live for several seasons or longer with minimal needs. Authentic Greek Oregano is the most pungent and flavorful of the oregano's. Very hard to find, yet sought for its culinary and medicinal potency.	\$3.35
H1031	Virginia Mountain Mint Seeds - (Pycnanthemum virginianum) Approx 50 seeds per pack	A stout but easy-growing perennial native; a must-have for any pollinator garden. Its tiny white flowers, often spotted with purple, release a strong mint-like aroma, blooming in numerous small, dense clusters rising above the stalks. Blooms July through early to mid-September, even October in warmer climates. It likes at least a half-day of sun but doesn't need rich soil or lots of water. Keeping the soil lightly moist during the first half of its first summer helps it become established; then it becomes very drought tolerant. Deer dislike Mountain Mint, preferring less pungent snacks.	\$3.15
<b>Vegetables</b>			
V1000	Achocha/Caihua Seeds - (Cyclanthera pedata) Approx 10 seeds per pack	Hugely prolific in fruit and leafy shade growth, they are a dual purpose plant for gardeners looking for a green shade or windbreak which gives a good supply of tasty food. Achocha/Caihua (pronounced kai-wa) is a slender tropical vine with long tendrils for climbing originally from South America. Domesticated in the Andes, it spread throughout Colombia and Bolivia in ancient times. It is now grown all across Central and South America, as well as India and Nepal.	\$4.50
<b>Artichoke</b>		<b>Approx 25 seeds per pack</b>	
V1336	Green Globe Artichoke Seeds - (Cynara scolymus) Days to Maturity:=85 days	Produces tender and flavorful green artichokes from 3-6' plants with 3-4" heads and thick scales. Considered a cool-season crop, they grow best at a 75°F average daytime temperature with 55°F nighttime temperatures. Also known as Early Green Globe Artichoke.	\$3.15
<b>Arugula</b>		<b>Approx 300 seeds per pack</b>	
V1197	Rocket Arugula/Roquette Seeds - (Eruca sativa) Days to Maturity:=55-60 days	A great cut and come again plant, this annual adds a refreshing tangy spiciness to salads and sauces. Rocket Arugula is also known as "rocket salad" or "roquette". Details Arugula thrives in cool weather. Succession sowing will ensure a longer season of young, tender leaves, since plants grow rapidly. You can eat the thinnings.	\$3.15
V1002	Wild Italian Arugula Seeds - (Rucola selvatica) Days to Maturity:=55-60 days	Tantalizingly complex - sweet, nutty, tangy and peppery. So tasty that it's addictive. Wild Arugula is more heat resistant than common arugula. Details Deep green, finely cut leaves display spicy, edible flowers. Truly a gourmet addition to your salads. For best flavor, pick leaves when 4"-5" long and plant is no more than 8"-10" high. Grow spring or fall, sowing seeds every 2 - 3 weeks for continual harvests. Will not transplant well, so direct sowing is necessary.	\$3.15
V1515	Wasabi Arugula Seeds - (Eruca sativa) Days to Maturity:=32-45 Days	Japanese wasabi is a special root that only grows in very specific climates, but now you can have the wasabi flavor right in your garden with this specially selected variety of arugula. Wasabi Arugula is a knock-off of the true flavor of wasabi right down to the tongue tingling and sinus clearing punch.	\$3.15
<b>Bean</b>		<b>Approx 50 seeds per pack</b>	
V1005	Black Valentine Bush Bean Seeds - (Phaseolus vulgaris) Days to Maturity:=50 days to snap stage	Prolific, string-less in all stages, the young snap beans are slender, almost round, and richly flavorful. pre-1850's heirloom that germinates in cool soil, making it a good, early planting bean. It produces masses of delicious, tender, straight, 6" long green beans very early in the season. The glossy, dry, black beans make a legendary black bean soup. Leave some pods to dry on the bush.	\$3.35
V1007	Kala Chana Garbanzo/Chickpea Seeds - (Cicer arietinum) Days to Maturity:=65-100 days	Excellent for home gardens, especially in dry, short-season areas. Originally from India, the mature seeds are often parched and eaten as a snack. The fresh or dried seed is cooked in soups, stews and is a main ingredient in hummus. The roasted seed is sometimes used as a coffee substitute. It has a slightly sweet flavor and a floury texture reminiscent of sweet chestnuts. The mature seed can also be sprouted and eaten raw. It is also ground into a meal and used with cereal flours for making bread, cakes, etc. A good source of carbohydrates and protein, it is often used by vegetarians and vegans as it has one of the highest protein levels of all plants. Use as a shelly or dry bean.	\$3.15

Stock #	Product Name	Description	Price
V1009	Lazy Housewife Pole Bean Seeds - (Phaseolus vulgaris) Days to Maturity:=75-80 days	Completely string-less beans. Brought to America by German immigrants and first listed in W. Atlee Burpees 1888 catalog. These beans were so-named because they were the first beans to not require destringing! "We presume it derives its name, which seems discourteous, from its immense productiveness making it easy to gather... Plants bear continuously until frost. One of the oldest documented beans and very productive.	\$3.35
V1010	Henderson's Baby Lima Bush Bean Seeds - (Phaseolus lunatus) Days to Maturity:=50 days	According to legend, this Lima was found growing along a Virginia roadside by a soldier returning home from the Civil War. This buttery-flavored, baby lima produces 3 to 4, excellent-tasting flat beans per pod. Very early, prolific and bears until frost. Good for dry or canned beans.	\$3.15
V1013	Purple Queen Bush Bean Seeds - (Phaseolus vulgaris) Days to Maturity:=52 days	Loads of easy-to-spot slim purple pods that turn green in cooking. Rated as the best flavored of all beans. Tried and true and a great experience for new gardeners. High yields. Unusual and appealing in both garden and kitchen.	\$3.15
V1014	Rattlesnake Pole Bean Seeds - (Phaseolus vulgaris) Days to Maturity:=70 days	Dark-green pods, mottled with purple resembling a rattlesnake. Fast grower, productive, and able to tolerate drought. String-less when young, excellent flavor green or dry. These are also excellent for freezing. Superb base for chili, excellent refried, a good baker, prime ingredient in famous Ozark Outlaw Snakebite Chili. Called "Preacher Bean" in parts of the south.	\$3.15
V1198	Anasazi Bush Bean Seeds - (Phaseolus vulgaris) Days to Maturity:=90-95 days	A beautiful maroon and white bean, similar to Jacob's cattle bean. Identified as one of the few cultivated crops grown by the Anasazi cliff dwellers. Sweet flavor, meaty and nutty. Our favorite cooking bean.	\$3.35
V1199	Dragon's Tongue Wax Bush Bean Seeds/Langerie Wax - (Phaseolus vulgaris) Days to Maturity:=60 days to snap stage	Long, creamy-yellow pods splashed with purple on compact, stock bushes, a unique heirloom butter bean from the Netherlands. Remarkably good flavor, crisp, juicy, string-less flesh makes these great fresh. One of the best yielding and tastiest beans anywhere. Best used fresh, not particularly recommended for long storage or freezing. Also known as Langerie Wax Bean.	\$3.15
V1507	Black Runner Bean - (Phaseolus coccineus) Days to Maturity:=105 days	Looks similar to their purple cousins the Scarlet Runner beans. Both grow long vines with luxurious foliage making a gorgeous screen for privacy or a leafy ceiling over an outdoor dining area. Most often planted for its ornamental beauty, it is highly attractive to hummingbirds and pollinator insects as well as being delicious in cooking.	\$3.35
V1486	Red Swan Bush Bean Seeds - (Phaseolus vulgaris) Days to Maturity:=55 Days	Deep rose to burgundy purple 4-6" string-less pods with a rich hearty flavor. Beans turn bright green when cooked and have tan seeds when dried. Red Swan is a newer variety, an open-pollinated bean that was bred out of a cross between a pinto and a purple podded bean bred by Minnesota bean breeder Robert Lobitz.	\$3.35
V1487	Blue Ribbon Bush Bean Seeds - (Phaseolus vulgaris) Days to Maturity:=48 - 55 days	Heavy producer of uniform, wide 5 - 6 inch green pods splashed with purplish mottling and are a superb flat pod. Ideal for fresh snap beans and excellent for canning, cooking and freezing. Great for fresh eating and are very tender when cooked.	\$3.55
V1476	French White Garden Bush Bean Seeds - (Phaseolus vulgaris) Days to Maturity:=50 days	A famous heirloom bean variety originally from the south of France, developed in the 1800s as a dwarf cultivar and originally known as 'Nain Hatif de Laon', or Early Dwarf Laon. There are several cultivars, all originally known under the trade name of 'Flageolets'. These are the white seeded variety, there are also green, black, red and yellow cultivars. Known as the 'Caviar of Beans' and rightfully so! Also known as the French Filet Blanc or French Flageolet Blanc.	\$3.15
V1477	Royalty Purple Pod Bush Bean Seeds - (Phaseolus vulgaris) Days to Maturity:=50-60 days	This bean certainly deserves its name with incredibly attractive deep, rich royal purple colored pods. Highly valued as a fresh snap bean, the string-less pods are 5-6 inches long and slightly curved. Hugely productive as well as highly attractive and ornamental, these bushy plants have very distinctive dark greenish-purple foliage and eye-catching lavender flowers, sending out short runners. Very easy to pick, as the clusters of dark royal purple pods stand out against the leaves.	\$3.35
V1015	Scarlet Runner Bean Seeds - (Phaseolus coccineus) Days to Maturity=70 days	One of the most prolific, edible yet ornamental beans that we have ever grown. Scarlet-red flowers bring butterflies and hummingbirds all summer. 12-16 inch pods (delicious fresh or cooked) hold many, giant, scarlet/black beans which produce fantastic, dried-bean dishes. Full, dark-green foliage looks lush all summer. Use as a snap, shelly or dry bean.	\$3.35
V1481	Brown Tepary Bush Bean - (Phaseolus acutifolius) Days to Maturity:=60-75 days	An ancient variety of bush bean, possibly originating around the Mexican states of Jalisco and Sinaloa, with recent studies indicating the earliest domestication and cultivation in the Tehuacín Valley, southeast of Mexico City around 5,000 BC. By 2,300 years ago, the domesticated tepary bean was widely grown from Guatemala throughout Mexico and into the American Southwest.	\$3.15

Stock #	Product Name	Description	Price
V1458	Asparagus Green Podded Pole Bean Seeds - (Vigna unguiculata) Days to Maturity:=75 days	A vigorous climber that begins to produce its trademark string-less long pods about 60 days after planting. Produces light-green pods in pairs, smaller diameter than black-seeded type, has red or maroon seeds with darker brown streaks when mature, popular in Asia and Japan. Pods can grow 14 - 30" long, but have the best flavor when harvested at 15 - 18". Also known as Chinese Long Bean.	\$3.35
V1392	Scarlet Emperor Runner Bean - (Phaseolus coccineus) Days to Maturity:=75 days	Fine, heavy producing variety. It has smooth-textured, stringless 12-15 in. dark-green slightly fuzzy pods with beautiful purple and black mottled beans up to 1 in. long, having a sweeter, more savory, richer flavor than snap beans	\$3.35
V1384	Golden Wax Bush Bean Seeds - (Phaseolus vulgaris) Days to Maturity:=45-60 days	A highly productive compact 15-20" tall plant with clusters of entirely string-less five inch golden-yellow somewhat flat pods having white seeds with a purple/brown eye. Delicious rich buttery wax flavor. Golden Wax was first introduced around 1871. Ideally suited for Northern climates, resistant to BCMV virus, freezes well, early dependable crop, for fresh, canning or freezing.	\$3.15
V1385	Kentucky Wonder Pole Bean (Brown) Seeds - (Phaseolus vulgaris) Days to Maturity:=58-72 days	High yielding, extended season bean with a distinctive flavor and good firmness. Pods are fleshy 7-10 in. that grow in clusters with brown seeded beans. Plants grow 5-7 ft. tall with clusters of long almost stringless pods that are rumpled, rather than smooth. Pods up to 9 in. long are not uncommon, but the beans are still tender, with the well known distinctive, delicious flavor, making them first-rate beans.	\$3.15
V1386	King of the Garden Lima Pole Bean - (Phaseolus lunatus) Days to Maturity:=85-93 days	Also known as Henderson's Leviathan and Garden King. Introduced in 1883, this beloved heirloom garden favorite produces huge crops until stopped by frost, with clusters of 4-6 1 1/4 in. long flat medium-green pods having 4-6 large creamy-white seeds in each pod. One of the largest lima beans on the market, favorite of home gardeners and market growers.	\$3.15
V1291	Broad Windsor Fava Bean - (Vicia faba) Days to Maturity:=75-85 days	Ancient legume that has been under cultivation for thousands of years. Fava beans are primarily grown for the edible seeds, which are eaten immature, as shelled beans, and mature, as dry beans. Fava beans are also a great nitrogen-fixing cover crop.	\$3.35
V1323	Tendergreen Bush Bean Seeds - (Phaseolus vulgaris) Days to Maturity:=45-57 days	A medium-dark green, round-podded, string-less and tasty bean with slight flecks of purple. Grows to 18-22" with 5-6 pods. Great flavor, pods are meaty and tender. Very productive over an extended season, with heavy yields even in hot weather. Introduced in 1922 and has been a favorite ever since. A great mainstay for the home gardener. Also known as Tendergreen String-less bean.	\$3.15
	<b>Beet</b>	<b>Approx 150 seeds per pack</b>	
V1020	Bull's Blood Beet Seeds - (Beta vulgaris) Days to Maturity:=35 days for baby leaf tops; 55 days for edible roots	Exceptional dual purpose heirloom. Stunning dark red young tops make attractive additions to salad mixes. The tasty round roots have a remarkably sweet, wholesome flavor. Harvest baby greens at 35 days or so. Later, as they mature, Bull's Blood greens turn dark burgundy and develop a rich flavor. These offer the drama of radicchio without its bitterness. Great-flavored, beautiful dark-red young tops are available in about a month from sowing and make attractive additions to salad mixes. Full-grown dark-red chard-type leaves are ready in 55 days and the tasty round roots have a remarkably sweet, wholesome flavor.	\$3.15
V1021	Chioggia/Candystripe Beet Seeds - (Beta vulgaris) Days to Maturity:=35 days for baby leaf tops; 55 days for edible roots	This beet is a pre-1840 Italian heirloom variety from Bassano, the Chioggia region of northeast Italy. Candy red exteriors and beautifully marked interiors of alternating white and cherry-red rings. Exceptional sweetness and long harvest. Noted as one of the earliest producers every year. Tender, mild, sweet greens as well.	\$3.15
V1450	Lutz Green Leaf (Winter Keeper) Beet Seeds - (Beta vulgaris) Days to Maturity:=60-80 Days	This beet is known for its long storage and notable sweet tender flavor. It is a smooth purple-red, top-shaped beet, 2 1/4 - 3" in diameter. The 14-18" tops with pink midribs are good for greens, excellent keeper, can grow up to about 6" in diameter without getting woody, good fresh, for winter and fall use. Treasured for their long storage, sweetness and mouth watering giant, glossy green tops.	\$3.15
V1388	Cylindra Beet Seeds - (Beta vulgaris) Days to Maturity:=45-80 days	This is the beet for beet lovers - sweet and tender flavor, fine grained, long, smooth and cylindrical. The 6-8" long by 1 1/2 - 2" diameter dark red beets are excellent for slicing. Also known as Formanova and Butter Slicer.	\$3.15
V1389	Golden Detroit Beet Seeds - (Beta vulgaris) Days to Maturity:=50-55 days	Beautiful golden-orange roots that won't bleed when sliced or cooked. Has good yields and is sweetest when young, does not become fibrous when larger. Looks almost like an overgrown orange-yellow carrot! Fast growing and retains sweet flavor when mature. Also known as Yellow Detroit beet.	\$3.15

Stock #	Product Name	Description	Price
V1022	Ruby Queen Beet Seeds - (Beta vulgaris) Days to Maturity:=40 days for baby leaf tops; 60 days for edible roots	Fine quality, early beet with a smooth, buttery texture and an outstanding flavor. Globe shaped with a smooth skin and even dark red coloring throughout. Grows well even in poor soils. First-rate for table use and canning. Early producer every year. Excellent color, sweet and tender.	\$3.15
	<b>Broccoli</b>	<b>Approx 100 seeds per pack</b>	
V1025	Spigariello Broccoli Seeds - (Brassica Oleracea) Days to Maturity:=65 days	Instead of heads, these plants produce broccoli-flavored leaves and tops over a long season. The more you cut, the more you get! Pick them as needed for soups, stews, stir fries and salads. Plant in July, harvest until hard frost, then reap and enjoy the vigorous late winter and early spring growth until hot weather. Unusual Italian heirloom whose demand escalates quickly as chefs, and now gourmet cooks request it from their growers.	\$3.15
V1521	Romanesco Broccoli Seeds (Brassica oleracea) Days to Maturity:=75-100 days	A very unique type of broccoli, with beautiful spiraling apple-green head. Widely grown in northern Italy, it has superb taste and texture than the finest broccoli. Grows more like a cauliflower plant. Romanesco has a pleasing, nutty taste, can be enjoyed raw but if cooked lightly, but still maintains its flavor and unique texture. Also known as Roman cauliflower, Broccolo Romanesco, Romanesque cauliflower or simply Romanesco, or more simply Broccoflower.	\$3.15
V1278	De Cicco Broccoli Seeds - (Brassica oleracea) Days to Maturity:=48-85 days	Introduced in 1890, this old, reliable European variety sports compact 2-3" light green plants with 3-4" bluish-green central head, then lots of medium sized side shoots. Maturity is on-going, more variable and productive than hybrids of today. Excellent quality, freezes well.	\$3.15
V1448	Green Sprouting Calabrese Broccoli Seeds - (Brassica oleracea) Days to Maturity:=55-80 days	A lovely, old fashioned Broccoli variety that is very disease resistant, very hardy and a very prolific producer of large dark bluish-green 5-8" heads with many side shoots. Has been a mainstay for many gardeners year in and year out, partly because it does not mature uniformly and partly because it produces many side shoots once the initial head is harvested.	\$3.15
V1125	Raab/ Rapini Broccoli Seeds - (Brassica rapa) Days to Maturity:=45 days	Raab is from the "Cima di Rapa" strain that makes small heads or shoots with lots of edible leaves and is very popular throughout Italy, especially in the South. Also called "asparagus broccoli" in Italy. Its tender shoots have a slightly spicy/peppery, broccoli-asparagus flavor that gives zing to salads, stir-fries and steamed dishes. Great as a very early spring or a fall and winter crop. Plants will grow to about a foot tall and will grow side shoots after the first harvest - a true "cut and come again" variety. A second, smaller harvest is normally possible within 7-10 days after the first.	\$3.15
	<b>Brussels Sprout</b>	<b>Approx 150 seeds per pack</b>	
V1271	Catskill Brussels Sprout Seeds - (Brassica oleracea) Days to Maturity:=85-110 days	A dwarf or semi-dwarf variety with heavy yields, large firm dark green early 1 1/4 - 1 3/4" sprouts on 20-24" plants with medium green leaves. A heavy producer, it is used mainly as a fall crop or in cool climates. Our open pollinated Brussels sprouts lack the uniformity and roundness of modern hybrids, but have a depth of flavor that is unmatched. Very hardy, becoming sweeter after first frosts. Classic European fall and winter green.	\$3.15
V1470	Long Island Improved Brussels Sprout Seeds - (Brassica oleracea) Days to Maturity:=80-115 days	A semi-dwarf sprout with compact 20-24" plants and has been the standard since the 1890s when it was introduced. The plants are semi-upright with medium green leaves and heavy sets of firm 1-2" sprouts over an extended season. Surprisingly good for the freezer, they keep their flavor well if frozen soon after harvest. This was the chief commercial variety in California until the more uniform hybrids were introduced.	\$3.15
V1294	Mezzo Nano Brussels Sprout Seeds - (Brassica oleracea) Days to Maturity:=100 days	Little known in America, but loved all across Europe from Italy up to England. Small compact producer of tasty brussels sprouts. These sprouts have an extended growing season - harvest sprout when small to appreciate their true flavor. The 3" central stalk has many small, compact, tender sprouts. Highly productive, especially in fertile well worked soil. Get a jump on the growing season by starting sprouts inside and transplanting the seedlings when about 7-8" tall in about 4-5 weeks. Taste is best when harvested after the early frosts.	\$3.15
	<b>Cabbage</b>	<b>Approx 100 seeds per pack</b>	
V1328	Savoy Perfection Cabbage Seeds - (Brassica oleracea) Days to Maturity:=90 days	A large drum-head type cabbage having delicious finely-crinkled, medium dark-green savoyed leaves that are sweet and mild in flavor. Heads average 6-8 lbs. Finer than most cabbages, being sweeter, with a delicate flavor, it does not give off a sulfur smell when cooking like other cabbage varieties. Hardy and easy to grow, especially as a late cabbage, its flavor improves even more after a light frost. High production means this is perfect for home gardens and market growers.	\$3.15

Stock #	Product Name	Description	Price
V1475	Red Acre Cabbage Seeds - (Brassica oleracea) Days to Maturity:=74-100 days	An early variety that forms dense round brilliantly deep red/purple heads that are 5-7 inches wide and 2-4 pounds. Small compact short-stemmed plants produce heads that are solid even in early stages and are resistant to yellowing and splitting. Holds up better in the garden without splitting and stores better in cool conditions longer than any other cabbage. Well known for consistently forming a solid, good-keeping head.	\$3.15
V1257	Early Jersey Wakefield Cabbage Seeds - (Brassica oleracea) Days to Maturity:=64 days	Introduced about 1840, these small 2-3 lbs. distinctly pointed, conical shaped heads are fast growing, ready for early summer harvesting. Best cabbage for early spring planting. Regarded by many as one of the best tasting cabbages. Compact size is ideal for raised beds. Easy to space four or five closely across the width of raised bed without overcrowding.	\$3.15
V1329	Danish Ballhead Cabbage Seeds - (Brassica oleracea) Days to Maturity:=85-110 days	Very dependable and productive variety, resists bolting and splitting and is a good keeper. The large round, blue-green heads are 7-8 in diameter, weighing 5-7 lbs. Introduced commercially by W. Atlee Burpee in 1887, this was a very popular variety of cabbage during the 19th century. Its history seems to be much longer, as the "Amager Short-Stemmed" strain was developed by the Dutch on Amager Island, just outside of Copenhagen in the 15th Century.	\$3.15
	<b>Carrot</b>	<b>Approx 500 seeds per pack</b>	
V1026	Red Cored Chantenay Carrot Seeds - (Daucus carota v. sativus) Days to Maturity:=60-75 days	This crisp, tender, sweet, and crunchy carrot is large bodied, deep red-orange to center. Fine grained smooth refined shape with wide shoulders great for bunching. It was introduced from French seed company Vilmorin-Andrieux in the late 1800s and a beloved American heirloom since about 1929. Sweetens in storage, making it the perfect Fall and Winter garden candidate. For table use, canning, juicing, freezing or storage. Heavy producer, even in heavier soils.	\$3.15
V1203	Yellowstone Carrot Seeds - (Daucus carota var. sativus) Days to Maturity:=70-75 days	This yellow beauty has wide-shoulders, 8" or longer roots have a crisp, clean, consistently mild flavor that's great raw or cooked. This variety has been selected for a uniform shape: big shoulders, pointed tips and large tops. Yellow carrots were first recorded in Turkey around the end of the 1st Century. They contain xanthophylls to help develop healthy eyes. Delicious and unusual carrots like these are preferred by gourmets and chefs.	\$3.55
V1330	Nantes Scarlet Carrot Seeds - (Daucus carota var. sativus) Days to Maturity:=65-75 days	Bright red-orange flesh is crisp, sweet, and delicious with a high sugar content, fine grained with almost no core. Average 6 - 7" long with blunt ends and small to medium tops. Also known as Early Coreless and Scarlet Nantes Coreless. Developed around the town of Nantes, France and introduced to the United States in the mid 1900's. A favorite choice for juicing due to its high moisture content. Prefers light, loose soils with plenty of added organic matter and good drainage. For successful growing in hot weather layer mulch around leaf shoots once established to keep roots cool.	\$3.15
V1331	Bambina Carrot Seeds - (Daucus carota var. sativus) Days to Maturity:=60 days	A baby carrot variety with slender, cylindrical blunt roots and a very small core. Very sweet tasting with smooth skin and crisp texture, this high yielding variety has a deep orange color that develops early. Perfect for container growing and very adaptable to a variety of soils; they are excellent for both early and succession sowing.	\$3.15
V1492	Pusa Rudhira Carrot (Red Carrot) Seeds - (Daucus carota var. sativus) Days to Maturity:=75-80 days	A newer, open pollinated variety developed by traditional plant breeding for the highest nutritional content and production. It is the work of Pritam Kalia, Head of Vegetable Science at the Indian Agricultural Research Institute, New Delhi. He has helped develop a number of nutritionally rich lines of carrots which are high in carotene, lycopene, anthocyanin and zanthophyll, as part of his work. Part of his focus is to bring robust, highly nutritious vegetables back to the rural farmers who have been left behind during the industrial agricultural revolution in India.	\$3.15
V1441	Cosmic Purple Carrot Seeds - (Daucus carota var. sativus) Days to Maturity:=60 days	This purple skin beauty has a solid orange to orange-yellow to bright yellow flesh with what many call a sweet-spicy flavor. Typically six to eight inches long, a sweet Danvers-type carrot. Great for market grower and home gardeners alike, they will usually be one of the first to sell out, especially if tasting samples are given! Cosmic Purple was developed by traditional plant breeding by Dr. Philip Simon and his staff at the USDA Agricultural Research Station in Madison, Wisconsin and released in 2005.	\$3.55
V1513	Kaleidoscope Baby Carrot Seed Mix - (Daucus carota var. sativus) Days to Maturity:=55-70 days	All Around A lovely full color spectrum in tender, delectable baby carrots. We've selected these carrots for their flavor, color and fast growth for both baby and full size carrots. The colors range from black to purple, red, orange, yellow and white; making this the center of attraction at picnics, parties, dinners or anywhere you want to add color and conversation. Pick young for baby carrots that kids simply cannot resist, or let grow for full-size use as slices, julienned sticks or slivers that sets the dish apart.	\$3.15

Stock #	Product Name	Description	Price
V1027	Little Finger Carrot Seeds - (Daucus carota var. sativus) Days to Maturity:=50-70 days	A baby gourmet carrot with a sweet flavor and delicious crunch. Slender 3 - 3.5" roots, very small core, smooth skin, deep orange color and full carrot taste. Color develops quickly, can and should be pulled early. Developed in France for using whole.	\$3.15
	<b>Cauliflower</b>	<b>Approx 300 seeds per pack</b>	
V1387	Snowball Y Improved Cauliflower Seeds - (Brassica oleracea) Days to Maturity:=65-75 days	This cauliflower is a self-blanching strain that needs no tying with dense, deep, well rounded, smooth white 6 1/2" heads appearing from silver-green leaves, 12-18" tall plants produce dense clusters of "white as snow" heads. Best for fall and winter harvest. Great for home gardener and market growers as it is reliable and heavy yielding, known for vigorous, rapid growth and a long harvest. This cauliflower is a good freezer and well adapted to short season gardens.	\$3.15
	<b>Celery</b>	<b>Approx 100 seeds per pack</b>	
V1468	Peppermint Stick Celery Seeds - (Apium graveolens) Days to Maturity:=80-85 days	Superior Flavor A unique red striped full flavored celery that is perfect for any kitchen garden. Each stalk has alternating pink to light red and green vertical stripes, making this a center point of the garden, kitchen and table. Stalks can grow 14 - 25" tall, this biennial gives abundant yields of flavorful celery stalks that keep their color when cooked. This is a true culinary delight.	\$3.15
V1083	Par-Cel Leaf Celery Seeds - (Apium graveolens v. secalinum) Days to Maturity:=72 days	A curly, cutting celery that looks like triple curled parsley and tastes like celery. An 18th Century heirloom, this Dutch variety is a 3' tall celery in leaf form instead of stalks. Withstands heat and drought, and is remarkably cold tolerant, lasting well into late fall. Very vigorous once established.	\$3.15
	<b>Collard Greens</b>	<b>Approx 200 seeds per pack</b>	
V1451	Georgia Southern Collard Greens Seeds - (Brassica oleracea) Days to Maturity:=70 days	A slow to bolt, non-heading type that is a reliable producer and can grow to be 3' tall. It was introduced before 1885. Light frost tolerant, which only makes the leaves sweeter. Grows upright, with large, somewhat crumpled blue-green leaves. Collards are some of the oldest greens in the Brassica family, and have excellent nutritional value.	\$3.15
V1452	Morris Heading Collard Greens Seeds - (Brassica oleracea) Days to Maturity:=52-85 days	Produces a loose, leafy head on a short stem. Heads form 18-24" wide with dark green to blue-green waxy leaves. Slow to bolt. Also known as Cabbage collards. An old favorite in the South, plants will withstand heat of the summer and grow well in cooler weather. Leaves are best eaten when young or after frost.	\$3.15
	<b>Corn</b>	<b>Approx 125 seeds per pack</b>	
V1033	Country Gentleman Corn Seeds - (Zea mays) Days to Maturity:=83-100 days	Named for the famous nineteenth-century American agricultural magazine. It was bred as a cross between Ne Plus Ultra, a variety introduced in 1882, and Stowells Evergreen, yielding a larger ear than either parent yet retaining the shoepeg shaped kernels of Ne Plus Ultra. The stalks are 6-7' tall, with 8" ears and are resistant to Stewart's wilt. The long, narrow white kernels are arranged in an irregular, tightly packed zigzag pattern, thus the name shoepeg - one of the distinctive characteristics of this variety. The corn ripens with a flavor that is rich, sweet, and milky. It was introduced in 1891 by Peter Henderson & Company of New York.	1 LB \$35.00 Pack \$3.35
V1035	Stowell's Evergreen Corn Seeds - (Zea mays) Days to Maturity:=80-100 days	A semi-sweet corn, originating as a cross between Menomoni Flour Corn and the Iroquois Northern Sugar Corn brought back from the Sullivan expedition in 1779. This cross was created and first grown by Nathan Stowell of Burlington, New Jersey, a few years prior to 1848. Introduced commercially in 1848, it became the leading white corn variety for home gardeners. One of the oldest named varieties still available, it can be pulled up whole in the fall before fully ripe, root and all, and hung upside down in a cool pantry or barn. Fresh corn could be picked well into February from these semi-wilted plants, thus prolonging the fresh corn season giving the name 'Evergreen'.	1 LB \$35.00 Pack \$3.35
V1355	Golden Bantam Corn Seeds - (Zea mays) Days to Maturity:=70-85 days	Old time hearty flavor that is rich yet not sugary sweet, 5-6' stalk, slender 5-7" ears. 8 rows of medium deep broad golden kernels with 2 or more ears per stalk, high yields and excellent flavor. Introduced in 1902 by W. Altee Burpee, it was grown by a farmer named Williams Chambers of Greenfield, Mass. From the 1906 Keith Seed Catalog, "Is superior to all others in rich, sweet flavor, and is the best corn to grow for home use".	1 LB \$35.00 Pack \$3.55
V1359	Baby Corn Seeds - (Zea mays) Days to Maturity:=65 days	Tender finger-like ears, delicately flavored, entirely edible, best harvested within 5 days of the appearance of silks. Each stalk makes 4-6 "good quality" baby ears.	\$4.00

Stock #	Product Name	Description	Price
V1390	Bloody Butcher Corn Seeds - (Zea mays) Days to Maturity:=100-120 days	Cobs are pink or red with red dent type kernels, striped a darker red with an occasional white ear will appear. The stalks are 10-12' tall and have 2-6 ears each. Good producer of heavy ears, can weigh up to 1/2 lb per ear when young and fresh. Withstands heavy winds, drought and heat. It is originally from Virginia and grown since before 1845 by the Meadows family.	1 LB \$35.00 Pack \$3.55
V1391	Hopi Blue Corn Seeds - (Zea mays) Days to Maturity:=75-110 days	An ancient flint corn that is a traditional staple of the Hopi people in Northern Arizona. Plants are 5' tall and bushy with beautiful smooth silvery blue ears that are 8-10" long and usually 2 per stalk. Kernels are ivory colored until dry-down, when they develop their stunning blue-black luster. Robust, drought-tolerant cultivar selected over many generations. Heap soil around the developing stems to prohibit falling over in strong wind.	1 LB \$35.00 Pack \$3.55
V1439	Oaxacan Green Dent Corn Seeds - (Zea mays) Days to Maturity:=70-105 days	Kernels are smooth in beautiful, striking shades of green from bronze to pea-green to emerald-green. Drought resistant, sturdy, 5-6' plants produce emerald green kernels on 6-8" ears. Oaxacan Green Corn has been grown by the Zapotec people of southern Mexico for centuries for green corn tamales made from fresh green corn masa.	1 LB \$35.00 Pack \$3.55
V1036	White Eagle Corn Seeds - (Zea mays) Days to Maturity:=115-120 days	This blue and white corn variety has very large ears over a red cob with colors ranging from all blue to a mixture of blue and white kernels. This beloved Cherokee corn was brought over the Trail of Tears in the 1830s during the forced relocation of the Cherokee nation from the southeastern states to Oklahoma. Provisions were brought along to sustain them along the way and grow food in their new home, with White Eagle corn being chosen. This corn is highly revered among the Cherokee nation, having been grown ever since. It adapted well to the needs of America's early farmers.	1 LB \$35.00 Pack \$3.55
V1435	Tarahumara Popping Sorghum - (Sorghum bicolor) Days to Maturity=110 days	Originated with the Tarahumara people of Mexico, but popping sorghum is also well known in western Africa. Traditionally popped, then ground into flour. Popped sorghum is a crunchy, fluffy and healthy treat that looks like a miniature popped corn but slightly sweeter, more crunchy and with no hulls to stick in your teeth! To achieve the best "pop", this sorghum needs to be dried down to a moisture level around 15% by spreading the kernels on large cookie sheets in the sun or in an unlit gas oven for a day or two. Test the dryness by popping a small batch, and then store the kernels in an air-tight glass jar.	\$3.15
V1352	Mennonite Sorghum - (Sorghum bicolor) Days to Maturity=110 days	Old time heirloom cane sorghum from Jamesport, MO. Grown for a sorghum mill by a Mennonite these red hulled, very thick stalks are 7-9' tall are juiced and boiled to make a very sweet, light-colored syrup. Produces good yields and lots of grain.	\$3.15
	<b>Cover Crops</b>		
V1496	Crimson Clover - (Trifolium incarnatum)	Annual legume used as a nitrogen fixer, soil improvement/building, erosion prevention, ground cover and for forage. Planting - Lightly broadcast seeds and work into the top half inch of moist soil, or cover with 1/2 inch of mulch or compost. Water to equivalent of 1 inch of rainfall per week until seedlings become established. Do not fertilize as this delays the nitrogen fixing action of the legumes. Our clover has an OMRI listed (suitable for organic production) inoculant seed coating and does not need additional inoculation when planting, so you can plant straight out of the bag. The seed photo above shows the light blue coating on the seeds.	1 LB \$11.50 8 oz \$5.75
V1497	Horizon Forage Pea - (Pisum sativum L.)	This pea is an annual legume, valued as a high nitrogen fixer, weed suppressor and forage that creates a high root mass, adding organic matter to the soil. It is also an excellent soil improver, and good for erosion control, weed suppression and grazing choice	1 LB \$10.50 8 oz \$5.75
V1498	Hairy Vetch - (Vicia villosa)	This legume is used to fix nitrogen, suppress weeds, loosen and condition topsoil and reduce erosion while improving soil organic matter and carbon content.	1 LB \$11.50 8 oz \$5.75
V1499	Cereal Oats - (Avena sativa)	Annual grain used to suppress weeds, prevent erosion, scavenge excess nutrients, add biomass and as a nurse crop.	8oz \$5.75
V1500	Cereal Rye - (Secale cereale)	Annual grain used for erosion prevention, soil structure and drainage improvement, adding organic matter to soil, weed suppression and excess nutrient scavenger.	1 LB \$11.50 8oz \$5.75
V1501	Buckwheat - (Fagopyrum esculentum)	Annual grain providing a quick soil cover and stabilization, weed suppressor, pollinator and beneficial insect nectar source, topsoil loosener and low fertility soil rejuvenator.	1 LB \$11.50 8oz \$5.75

Stock #	Product Name	Description	Price
V1502	Garden Cover Up Mix (Cover Crop)	This mix grows vigorously until killing frost, giving you a spring mulch needing very little to no preparation before planting. Ideal for cool season gardens. This mix will loosen topsoil while protecting from winter erosion and nutrient loss and suppress weeds. The surface residue and root volume provides food for soil microorganisms to create more healthy soil.	1 LB \$11.50 8oz \$5.75
V1517	Soil Builder Seed Mix (Cover Crop)	We've collaborated with our grower in developing a cover crop seed mix specifically focused on building and improving your garden soil. 13 varieties each contribute their own unique advantages to this mix. We looked closely at what healthy, fertile and nutrient-rich soils have in common but were mostly missing in today's garden soils. We found the missing link to be abundant mycorrhizal communities in the soil. Once you've improved the soil structure and increased the nutrients, then you need biology to get those nutrients to the plants in a form they can use. Mycorrhizal fungi are beneficial allies with plant roots, linking them to the needed nutrients that are out of reach of the fine roots. Mycorrhizae can extend the reach of the roots into the soil by several hundred times!	1 LB 12.25 8oz \$6.15
	<b>Cowpea</b>	<b>Approx 60 seeds per pack</b>	
V1038	Fagiolino Dolico di Veneto Cowpea Seeds - (Vigna unguiculata) Days to Maturity:=65 days	Fagiolino is small bean, dolichos means "bean-eye" or bean with an eye, di Veneto is "from Veneto". Therefore this is a small bean with an eye from the Veneto region. Sweet, nutty flavor. Unusual growth habit: pods grow upright like antlers, which facilitates picking. This very productive rare cowpea is in high demand and hard to find. Uses Harvest pods when very thin for use as a snap bean, larger for dried use.	\$3.55
V1444	Mayo Speckled Cowpea Seeds - (Vigna unguiculata) Days to Maturity:=70-85 days	This little cowpea has a similar appearance to a tiny pinto bean with great flavor. A pretty little mixed-color cowpea with shades of gray, gray-mottled, or orange and tan mottled. Originally from a Mayo village in the low desert of Los Capomos in the state of Sinaloa, Mexico. Not available commercially, they are very tasty and deserve to be better known in home gardens.	\$3.15
V1461	Black-eyed Pea/ Cowpea Seeds - (Vigna unguiculata) Days to Maturity:=60-78 Days	The Black-eyed Pea or Southern Pea has vigorous, high yielding plants that grow 24-40" tall and produces 7-9" pods. Wilt resistant, easy to grow and easy to cook. Thomas Jefferson wrote about growing Black-eyed Peas in the 1770's. They are considered a "lucky" food to eat on New Year's Day bringing prosperity to the New Year.	\$3.15
V1039	Pretzel Bean Cowpea Seeds - (Vigna unguiculata subsp.) Days to Maturity:=65 days	This cowpea produces pods in the shape of a pretzel or like a ram's horn. Vigorous twining vines are a plus for gardens with limited space. As easy to grow as standard beans and not bothered by bean beetles. Successful in high temperatures, drought and poor soils. Very productive in more favorable conditions. Great flavor. Uses Pick young green pods as snap beans, harvest green peas as shelly beans or peas, and let pods dry for dry beans. The dried pods left on the stem can be used in flower arrangements and for holiday decorations.	\$4.25
	<b>Cucumber</b>	<b>Approx 35 seeds per pack</b>	
V1041	Cucamelon/Mouse Melon Seeds - (Melothria scabra) Days to Maturity:=80 days	These tiny, 1" light-green fruits with darker mottling look like watermelons for a doll house. The flesh is white, crisp, and crunchy with a slight lemony tartness. The flavor is closer to a cucumber than a melon. This tiny treasure can match the crunch of pretzels and chips. An excellent conversation piece in the garden, or as an edible centerpiece at the table. The vine is attractive and productive enough for hanging baskets. Also known as the Mexican Sour Gherkin, mouse melon or Sandita• One person described them as, Cucumber with a bit of watermelon rind and a squeeze of lemon juice."	\$4.00
V1042	Everbearing Cucumber SMR58 Seeds - (Cucumis sativus) Days to Maturity:=60 days	Continually produces fruits for the entire season if kept picked, living up to its namesake. It does its job with great regularity, earning it a perennial spot in many home gardeners planting lists. Crisp cucumbers have an excellent sweet, mild flavor, color and crunch. Vigorous, disease resistant vines loaded with fruit all season. Smaller lengths " about 4" have a sweeter flavor, while the larger ones are more robust for spicier relishes.	\$3.15
V1044	Suyo Long Cucumber Seeds - (Cucumis sativus) Days to Maturity:=60-65 days	A Chinese heirloom, delicious, burp-less, not bitter, almost seedless flesh. Fruits grow to 15" long, thin, crisp and tender-exceptionally hardy, productive and fine-flavored even under adverse conditions. Trellis these to get straight fruits or leave on the ground for curved shaped fruits. Fruits are spiny when young, and become smoother at peak maturity. Fruits tend to curl on one end. Widely adapted, heat tolerant and sets early and often.	\$3.15

Stock #	Product Name	Description	Price
V1245	Boston Pickling Cucumber Seeds - (Cucumis sativus) Days to Maturity:=50-60 days	Considered by many as the standard for home-made pickles, it always gives high yields of short, blocky, thin-skinned cucumbers with crisp, solid flesh perfect for pickling. Often described as an amazing producer giving almost a gallon of cucumbers per plant. The ideal size is between 2–6" to fit into standard pickle jars. If you miss a few, simply chop them for relish as they stay mild and sweet when larger. First appeared around 1880 when it was listed by D.M. Ferry and Co. and Wood and Sons.	\$3.15
V1370	Armenian Pale Green Cucumber Seeds - (Cucumis melo) Days to Maturity:=50-75 days	The Armenian is known as the Burp-less Cucumber. Light-green, heavily ribbed, 3-4 in diameter, best to harvest at 12-18" long, mild flavor, easily digested-skin, fluted slices, prolific producer. Fruits twists and turns on ground but hangs fairly straight from trellis. Tender skin never needs peeling and never bitter. Very good for a humid climate. Introduced from Armenia to Italy in the 1400s. Regarded as one of the best slicing cucumbers. Also known as Armenian Burp-less Cucumber, Yard Long, Guta, Snake or Serpent Cucumber.	\$3.15
V1371	Parisian Pickle Cucumber Seeds - (Cucumis sativus) Days to Maturity:=60 days	A fine French heirloom cucumber that makes excellent pickles when picked small. Very reliable, early and productive cucumber with lots of tiny crisp fruits. Also known as Improved Bourbonne. Selected for the cooler northern climate of Paris since the late 1800s for gherkins, or small pickles. Introduced in the US around 1892 by James J. H. Gregory of Marblehead, Massachusetts.	\$3.15
V1433	Poona Kheera Cucumber Seeds - (Cucumis sativus) Days to Maturity:=50-60 days	An heirloom cucumber from Poona, India with delicious fruit that are at first cream or light green in color then turn light golden brown. The flesh is crisp, juicy, delicate and very different from that of a conventional cucumber. Traditionally sold when skin is light-green, but flavor is best and sweetest when skin is just turning brown. Very heavy producer and trellising makes it easier to find fruit. Needs some space to spread out, not suited for square foot gardening or very small gardens unless planted along a fence or trellised up a wall.	\$3.15
V1482	Crystal Apple Cucumber Seeds - (Cucumis sativus) Days to Maturity:=65 days	These small 3" oval fruits are about the size of a small apple with a creamy pale greenish-white color and mild, almost slightly sweet flavor with a crisp texture and no bitter aftertaste. Resembling Granny Smith apples, they are often tender enough to eat skin and all. Similar in appearance to, but unlike, the True Lemon Cucumber. This is lighter in both color and flavor.	\$3.15
V1045	True Lemon Cucumber Seeds - (Cucumis sativus) Days to Maturity:=58-70 days	Lemon-like in color, size and shape, the True Lemon Cucumber's white flesh is sweet with a superb crunch. They start producing a little later than other cucumbers, but keep producing after everything else has quit. Neither flesh nor skin is bitter and it is a versatile cucumber. Very popular with chefs and gardeners who know them. Introduced from Australian markets in Samuel Wilson's 1894 catalog (Mechanicsburg, PA).	\$3.15
	<b>Eggplant</b>	<b>Approx 50 seeds per pack</b>	
V1047	Rosa Bianca Eggplant Seeds - (Solanum melongena var. esculentum) Days to Maturity:=70-90 days	A beautiful, round Italian heirloom variety with stunning, plump, tear-drop- shaped designer fruits with rosy lavender skin and alabaster flesh. The meaty and firm yet tender flesh has a delicate mild flavor, creamy consistency with no bitterness. Beautiful both in the garden and in the kitchen. Has almost disappeared from the market.	\$3.15
V1372	Black Beauty Eggplant Seeds - (Solanum melongena var. esculentum) Days to Maturity:=72-85 days	This classic beauty eggplant is the standard by which all other large eggplants are measured. Bushy spreading 24-30" tall plants with 4-6" purplish black smooth oval fruits, blunt and broad at blossom end, retains color well, 1-3 lbs. High quality, fine flavor, yields well in the North if the season is long.	\$3.15
V1269	Long Purple Italian Eggplant Seeds - (Solanum melongena var. esculentum ) Days to Maturity:=70-80 days	A very productive long dark purple club shaped Italian eggplant from the 1850's. Looks like a purple zucchini. Fruits are 8-10" long and 2 1/2" in diameter with very tender and flavorful yet firm mild flesh. It has a milder, more delicate flavor than other eggplant, with four or more fruit per plant.	\$3.15
	<b>Kale &amp; Kohlrabi</b>	<b>Kale Approx 200 seeds per pack</b> <b>Kohlrabi Approx 100 seeds per pack</b>	
V1480	Red Ursa Kale Seeds - (Brassica napus) Days to Maturity:=55- 65 days	This uncommon, old European variety, is quite different from either of the more common curly and Tuscan varieties. The base color is a blue-green with brighter purple accents, and the leaves are flatter than other types, with long, frilled edges. Cold hardy, it can be picked continually until early winter. Looks beautiful in the garden and has wonderful flavor as well as being very nutritious.	\$3.15

Stock #	Product Name	Description	Price
V1259	Lacinato Kale Seeds - (Brassica oleracea) Days to Maturity:=60-90 days	This Italian heirloom kale is widely acknowledged as one of the most beautiful, it is an 'open' kale from the early 18th century in Tuscany. It is probably the same variety described in 1885 by the famous French seedhouse Vilmorin-Andrieux as Cavolo Nero or Tuscan Black Palm. It is also known as Nero di Toscana and Dinosaur kale. Lacinato Kale produces dark blue-green strap-like, heavily savoyed or blistered leaves - 3" wide x 10" long - that look almost black at a distance. Flavor is sweet and mild and enhanced by frost, extremely winter hardy yet this variety is very tolerant of both heat and cold.	\$3.15
V1260	Vates Blue Curled Kale Seeds - (Brassica oleracea) Days to Maturity:=50-80 days	Scotch type kale that is slow bolting with finely curled blue-green leaves. Low growing variety with short stems, 12-16" tall with 24" heads. Very hardy in heat and cold. Sow early spring or mid summer, long production times.	\$3.15
V1052	Red Russian Kale Seeds - (Brassica napus var. pabularia) Days to Maturity:=50-65 days	Old European variety, that is quite different from either of the more common curly and Tuscan varieties. The base color is a blue-green with brighter purple accents, and the leaves are flatter than other types, with long, frilled edges. Cold hardy, it can be picked continually until early winter. Looks beautiful in the garden and has wonderful flavor as well as being very nutritious.	\$3.15
V1053	Early White Vienna Kohlrabi Seeds - (Brassica oleracea) Days to Maturity:=50-65 days	Early dwarf heirloom kohlrabi with short tops and medium stems. Bulbs have crisp, white, tender flesh that is best when 2 1/2 in diameter. Harvest it young, when it tastes somewhat like a globe artichoke. A small biennial plant with slender leaf stalks that are widely spaced on a rounded, turnip-like stem situated above the ground. Kohlrabi is a cool season crop, so plant early in Spring or later in the Summer for a great Fall taste.	\$3.15
	<b>Lettuce &amp; Greens</b>	<b>Approx 200 seeds per pack</b>	
V1055	Corn Salad/Lambs Lettuce/Mache Seeds - (Valerianella locusta) Days to Maturity:=45-60 days	A small plant with a rosette of rounded leaves with a unique, nutty, delicate, buttery flavor. Quick growing, sow in early spring or late fall. It grows like spinach for early-season gourmet greens. Harvest any time, even after plants go to seed. Never bitter.	\$3.15
V1057	Buttercrunch Bibb Lettuce Seeds - (Lactuca sativa) Days to Maturity:=50-75 days	This lettuce has thick, juicy leaves folded into crisp, tender heads. More compact with dark green reddish-tinged 4 1/2" rosette heads. Wonderful, buttery flavor. Heat resistant, slow to bolt, remains sweet even after going to seed. One of the highest quality bibb varieties available. Originally bred by Cornell University and was the winner of the All American Selection in 1963.	\$3.15
V1061	Glorious Greens Lettuce Seed Mix - (Lactuca sativa) Days to Maturity:=45-65 days	A unique selection of 15 fast-maturing lettuces especially chosen to balance leaf shapes and colors. Perfect choice for kitchen gardens and farmer's market sales as a gourmet lettuce mix. For a longer harvest season, do a succession planting every 2-3 weeks. This will keep a fresh supply of greens growing for you!	\$3.15
V1067	Sweet & Spicy Greens Seed Mix Days to Maturity:=45-60 days	A blend of Lettuces, Arugula, Red Russian Kale, Mizuna Mustard, Tatsoi Mustard, Endive and Radicchio seeds. Fine for spring planting and especially good for late summer planting. Choice hand-picked blend for home gardeners. For a longer harvest season, do a succession planting every 2-3 weeks.	\$3.15
V1069	Green Salad Bowl Lettuce Seeds - (Lactuca sativa) Days to Maturity:=45-68 days	Large, fast-growing rosettes of sweet, bright green wavy, deep-notched crisp leaves. A loose head cut and come again type. Never bitter, slow to bolt, long harvest. A staple for home and market growers. An All American Selection winner in 1952.	\$3.15
V1207	Miner's Lettuce Seeds - (Claytonia perfoliata) Days to Maturity:=40 days	Crisp, mild, wonderful wild green somewhere between a butter lettuce and spinach that makes a wonderful addition to mesclun mixes, salads and sandwiches. Leaves are small yet abundant and easy to pick. Hardy, prefers moist soils. Commonly referred to as winter purslane in Europe.	\$3.15
V1208	Oak Leaf Lettuce Seeds - (Lactuca sativa) Days to Maturity:=38-60 days	Firm rosettes of tender, sweet, light-green, deeply lobed leaves. As outer leaves are picked, plants produce more inner leaves. Resists heat and bolting, long standing, never bitter with a fine flavor even late in summer. First introduced in 1771 by Vilmorin Seeds in France.	\$3.15
V1209	Saint Anne's Slow-Bolting Lettuce Seeds - (Lactuca sativa) Days to Maturity:=58 Days	A rare short Romaine type butterhead with slightly crunchy light green leaves. Slowest to bolt butterhead with a great taste, crispness and holding ability. Good heat tolerance with a field life of 4-5 weeks. It is best used as a cut and come again lettuce.	\$3.15

Stock #	Product Name	Description	Price
V1514	Red Romaine Lettuce Seeds - (Lactuca sativa) Days to Maturity:=66-70 days	A gorgeous, eye-catching variety deserving a spot in your garden. The colorful leaves start out green then mature into a deep red-bronze. Salads and sandwiches are better with the sweet, tart, flavorful crunch of the leaves. Red Romaine was one of the test lettuces grown on the International Space Station from seed for the 2014 Veg-01 experiment on growing food in space. The heads are thick enough to grill if allowed to form, but are great as a cut-and-come-again. Works great in little spaces in the garden and containers that don't have much depth.	\$3.15
V1489	Mini Greens Lettuce Seed Mix Days to Maturity:=15-40 days	A custom blend of red and green leaf lettuces. This 50/50 mixture includes Red Oak Leaf, Red and Green Salad Bowl, along with Black Seeded Simpson. These delicious mini greens are usually harvested somewhere in between a sprout and true baby leaf lettuce. Highly in demand by chefs and high end restaurants, our mini greens mix is perfect for an extremely fast maturing harvest of attractive, delicately flavored greens that can also be allowed to mature to their full size if desired. Succession plant every 10 days for a continuous harvest of these tiny greens.	\$3.15
V1420	Marvel of Four Seasons Lettuce Seeds - (Lactuca sativa) Days to Maturity:=60 days	Beautiful and delicious lettuce with tender sweet heavily crinkled leaves that change from green at the base to a striking cranberry-red at the tops. Loose heads are 8-12" in diameter. harvested somewhere in between a sprout and true baby leaf lettuce. Highly in demand by chefs and high end restaurants, our mini greens mix is perfect for an extremely fast maturing harvest of attractive, delicately flavored greens that can also be allowed to mature to their full size if desired. Succession plant every 10 days for a continuous harvest of these tiny greens.	\$3.15
V1421	Amish Deer Tongue Lettuce Seeds - (Lactuca sativa) Days to Maturity:=45 - 55 days	Medium green triangular leaves that form a loose upright head with a pleasant flavor. This heat tolerant variety is less prone to bolting in warmer weather and is tolerant to different climates. Valued by the Amish for its ruggedness and high production, dates back to the 1840's. Very popular with heirloom growers, market gardeners and chef's growers.	\$3.15
V1374	Little Gem Lettuce Seeds - (Lactuca sativa) Days to Maturity:=45-50 days	A refined Dark Boston type lettuce with 4-5" tightly wrapped heads with bright green leaves, a pale yellow heart that is sweet and crunchy with a superb flavor described as nutty with a reserved sweetness. Heat tolerant conical heads can be planted 6 inches apart for more production in smaller gardens. This is a midget lettuce often described as of a combination of a Butter and Romaine lettuce. The perfect salad for two, simply cut in half and drizzle with a vinaigrette of your choice.	\$3.15
V1375	Freckles Lettuce Seeds - (Lactuca sativa) Days to Maturity:=55-70 days	A beautiful tender heat and sun tolerant romaine lettuce with green leaves splashed with red. This heirloom lettuce variety dates back to Austria in 1793. The Austrian description is close to "trout lettuce", describing it's speckled coloration. Also known as Flashy Troutback lettuce. Thrives in warm climates with fertile soil and moderate rain or irrigation. Because of its sun and heat tolerance, this slow-bolting variety is a great choice for warmer gardens in the summer.	\$3.15
V1378	Terroir Seeds Romaine Lettuce Seed Blend - (Lactuca sativa) Days to Maturity:=50-85 days	A custom blend of Red Romaine, Freckles, and Jericho romaine lettuces. A great way to have different colors, shapes and flavors in your salad!	\$3.15
V1314	Black-Seeded Simpson Lettuce Seeds - (Lactuca sativa) Days to Maturity:=40-65 Days	Large loose frilly light-green lightly crumpled leaves on crisp textured loose heads with a delicate flavor. Large upright plants are very early maturing and adaptable. Slow to bolt, stands heat and drough well, stays sweet and tender longer than many other lettuces. Also known as Best of All or Simpson lettuce. A great cut and come again lettuce for the home gardener. Introduced around 1850.	\$3.15
V1248	Gourmet Lettuce Seed Blend - (Lactuca sativa) Days to Maturity:=45-65 days	Our Gourmet Lettuce Blend is some of our favorite, head, leaf and romaine lettuces. A great surprise in your garden, this blend is great when you can't make up your mind which lettuce to grow. Succession planting will keep your salad bowl full all season long!	\$3.15
V1071	Tom Thumb Lettuce Seeds - (Lactuca sativa) Days to Maturity:=50-70 days	Slightly savoyed, bright green slightly crumpled leaves with a sweet, delicate flavor, on compact heads. One head makes a salad for two. Beautiful in small pots, window boxes, hanging baskets and planted under trees. Grows well planted close together in small spaces. Dates from 1830's one of the oldest American lettuce still grown. From the 1888 RH Allen Seed Co- "Very dwarf, but an abundant yield. Fine quality with heads about 9 inches."	\$3.15
	<b>Melon</b>	<b>Approx 25 seeds per pack</b>	
V1190	Vine Peach / Mango Melon Seeds - (Cucumis melo var.chito) Days to Maturity:=80-90 days	A drought-tolerant annual whose fruits are peach-sized and colored, and mango-like in flavor and texture. Often mistaken for their kissing cousins, the inedible Queen Anne's Pocket Melon a couple of vine peaches in a bowl will perfume the room with their namesake scent peaches and mangoes. Easy to grow, very productive, vigorous, pest-resistant vines.	\$3.35

Stock #	Product Name	Description	Price
V1211	Green Machine Melon Seeds - (Cucumis melo) Days to Maturity:=80-85 days	Reliably sweet, this green rind with succulent orange fleshed melon is a stabilized cross of a Kansas melon and Jenny Lind melon. Melons weighs 3 - 4 lbs. and does well in cool as well as warm areas. A truly succulent melon that stands out in today's supermarket bland melons. The name Green Machine is reflective of the plants high-output of melons. It is also known as the Ice Cream melon because it is a perfect size for a scoop of ice cream. The plants are very compact, making it an excellent choice for smaller gardens.	\$3.15
V1237	Prescott Fond Blanc Melon Seeds - (Cucumis melo var. cantalupensis ) Days to Maturity:=85-95 days	Flattened, ribbed true French heirloom cantaloupe with warts and bumps, 4-9 lbs, grey-green rind ripens to straw color with salmon-orange flesh. Excellent flavor and fragrance, good yield, drought and wilt resistant. Keeps producing with an average of four melons per plant. Best flavor is produced in dry weather. Mentioned in 1860s but is likely much older.	\$3.15
V1273	Casaba Golden Beauty Melon Seeds - (Cucumis melo) Days to Maturity:=104-120 days	These golden beauties have a wrinkled rind that matures to a golden color, with white aromatic flesh. Produces melons that are 7-8 lbs. Great for home gardeners and small markets, an excellent shipper and will keep for months. Specifically adapted to hot dry climates, especially Arizona and southern California. This melon was first introduced in the 1920's.	\$3.15
V1381	Minnesota Midget Melon Seeds - (Cucumis melo var. reticulatus) Days to Maturity:60-75 days	A very early maturing, unique sweetly flavored muskmelon that can produce two crops in a season- excellent for Northern gardeners. Perfect for smaller gardens or containers with compact 3' vines and large crops of 4" melons with thick meaty gold-yellow flesh having a high sugar content that is edible to the rind. Very high quality melon with fine dense netting. Developed by the University of Minnesota in 1948. Resistant to fusarium wilt.	\$3.15
V1430	Oliver's Pearl Cluster Melon Seeds - (Cucumis melo) Days to Maturity:=90 days	A highly recommended melon for smaller gardens or container gardening as it grows small 2 ft plants and produces small and tasty melons in a very compact space. This bush-type honeydew is known as the in taste and production of the small melons. Bred by Park Seed Company in the 1950's and subsequently dropped in the late 1970's to early 1980's as hybrid melons became more popular. With its flavor, size and productivity, it deserves to be better known!	\$3.15
V1075	Honey Rock Melon Seeds - (Cucumis melo) Days to Maturity:=80 days	Superior, 3 - 4 lb. melons with thick, sweet, salmon-colored flesh. Vigorous, disease resistant plants set large numbers of fruits, 5 - 7 melons per plant or more. Does well in northern U.S. and southern Canada. Also known as Sugar Rock melon. It was the 1933 All American Selections winner.	\$3.15
V1526	Charentais Melon Seeds - (Cucumis melo var. cantalupensis) Days to Maturity:=75-90 days	A true French heirloom cantaloupe from the Poitou-Charentes region of western France, this is the melon to fall in love with, or over. Mostly smooth-skinned but can have some netting, the fruits are petite, 2 – 3 lbs and about the size of a large grapefruit – perfect for sharing! Its hard, grey-green skin has distinct vertical green ribbing protecting dense, succulent, salmon-orange flesh that is almost unbelievably sweet and aromatic. Vines are compact and well-kept, perfect for the smaller garden and do well on a trellis.	\$3.15
	<b>Mustard</b>	<b>Approx 200 seeds per pack</b>	
V1244	Red Giant Mustard Seeds - (Brassica juncea) Days to Maturity:=30 days	Flavor That Pops Japanese mustard with large thick tender deep purple-red savoyed leaves with white midribs with a strong mustard flavor. Excellent for salads with a unique and spicy flavor different than other mustard's. Pick young for milder flavor. Use like spinach or chard to mix with lettuce.	\$3.15
V1282	Mizuna Mustard Seeds - (Brassica rapa) Days to Maturity:=40 days	Mizuna is a hardy annual that produces 8-15" high slender white stalks topped with rosettes of thick, deeply-cut green leaves. A wonderful "cut-and-come-again" variety. This Japanese heirloom is a cool-season crop and should be started in early spring or late summer. Slow to bolt, extending the season nicely for both short and long growing climates.	\$3.15
V1283	Tatsoi Mustard Seeds - (Brassica rapa) Days to Maturity:=21-45 days	Very cold tolerant and prolific, tatsoi leaves are crunchy and tender with a mild mustard flavor and tangy, peppery notes adding interest to cool-weather salads. The spoon-shaped leaves with crisp stalks are visually intriguing, making it friendly in a number of cuisines and dishes. Botanically it's related to Chinese cabbage, but like the offbeat, cool cousin.	\$3.15
	<b>Okra</b>	<b>Approx 100 seeds per pack</b>	
V1262	Cow Horn Okra Seeds - (Abelmoschus esculentus) Days to Maturity:=55-60 days	With its distinctive long curved fruits grow on 8-14' plants. Pods can grown as long as 10-14" but are most tender when 8-10" long. The name cow horn comes from the curvature of the ends of the fruit. Classic okra as it used to be - long, tall and tasty! Heirloom okra is much taller and the pods are longer than those of today, with a flavor to match their looks. Tall vigorous plants have heavy production.	\$3.15

Stock #	Product Name	Description	Price
V1263	Clemson Spineless Okra Seeds - (Abelmoschus esculentus) Days to Maturity:=52-55 days	One of the most classic and popular okras, 4-5" tall plants produce high yields of spineless medium green pods early in the season. Improved by Clemson University from their 1939 All American Selection winner Clemson Spineless for spineless qualities and better production. Pods have the best flavor and texture when harvested at 3-4" long.	\$3.15
V1456	Louisiana Short Pod Okra Seeds - (Abelmoschus esculentus) Days to Maturity:=85 days	Stocky branching plants, approximately 48" tall with short fat green pods. A Louisiana heirloom that is perfect fresh or in gumbos This later maturing variety is perfect for longer growing seasons and will produce well until a hard frost. Regular harvesting will encourage continued growth of pods.	\$3.15
V1078	Red Burgundy Okra Seeds - (Abelmoschus esculentus) Days to Maturity:=49-65 days	This beautiful okra has green leaves on 4' plants with burgundy pods, stems, branches and leaf ribs. The 6 - 8" pods stay tender longer than most. A reliable and productive variety, even in less than ideal conditions. Developed at Clemson University after eight years of selection. Delicious, burgundy fruits turn green when cooked. Fabulous plant for edible landscaping - and the dried pods are knockouts!	\$3.15
<b>Onion &amp; Leek</b>		<b>Approx 500 seeds per pack</b>	
V1406	Evergreen Bunching Onion - (Allium fistulosum) Days to Maturity:=60 - 120 days	Also called Sakata's Evergreen Hardy, Japanese Bunching or Nebuka Onion, produces tender and mild white-fleshed clusters of 4 - 9 long slender silvery stalks that are 12 - 14 inches long. This non-bulbing, green bunching type of onion or scallion is very hardy, overwinters well and is slow to bolt. Disease resistant. The leek-like stalk divides continuously and the white outer skin means no stripping for market.	\$3.35
V1251	American Flag Leek/Giant Musselburg Seeds - (Allium ampeloprasum) Days to Maturity:=120-155 days	Scottish heirloom leek introduced in the 1830s near Edinburgh, Scotland with delicious, sweet, subtle onion flavor. Treasured in Europe for centuries and gaining popularity in America as it's flavor is discovered. Very winter-hardy plants with blue-green white stalks 7-10" long and 1 1/2" in diameter. Standard variety for home and market gardeners as it grows very uniformly. They withstand cold temperatures remarkably well and have become an important winter vegetable.	\$3.15
V1253	Tokyo Long White Onion (Bunching) - (Allium fistulosum) Days to Maturity:=65 - 95 days	Bunching onion with dark green leaves with white stalks grow 20-22" long. Highly resistant to hot weather but is fairly cold resistant also. Excellent for fall and summer bunching, not for winter. Plant early spring and early summer for continuous yields.	\$3.35
V1213	Walla Walla Onion - (Allium cepa) Days to Maturity:=Spring (120 days) or fall (300 days)	May be the world's best-tasting onion. Seeds were brought back from Corsica to the Walla Walla Valley around 1900. Sweet, mild, juicy and delicious as a raw salad onion, this Spanish type is in a class all of its own. This sweet onion was developed over several generations through the process of carefully hand selecting onions from each year's crop, ensuring exceptional sweetness, jumbo size, and round shape of this traditional Washington sweet onion. Light brown skin, white flesh with a very mild and sweet flavor. A very cold hardy northern, long day rival to the Vidalia. Hardy to -10°F.	\$3.35
V1214	Yellow Sweet Spanish Utah Onion - (Allium cepa) Days to Maturity:=110-130 days	Deep globe up to 6" in diameter and up to 2lbs. each. Shiny straw brown skin with white medium firm flesh is a heavy producer. Well adapted to the Western United States, and similar climates. This sweet onion is very popular for slicing and eating raw because of its mild sweet taste and is delicious baked, sauted, or fried. Named the state vegetable in the 2002 General Session of the Utah State Legislature.	\$3.35
<b>Other Miscellaneous</b>			
V1483	Apellewa Quinoa Seeds - (Chenopodium quinoa) Approx 125 seeds per pack Days to Maturity:=80-100 days	Stout 3' plants produce medium to large yields of very plump seeds with pale pink to cream seed-heads . With its large seed-heads and broad leaves it looks something like a cross between sorghum and spinach. It is an annual, broad-leaved and grows from 3 - 6 ft tall with seeds in sprays at the top. Very cold and drought hardy, yet tolerates higher temperatures and poor soils. Highly productive, it is an ideal grain crop for the home gardener. Seeds are ready to harvest when the leaves have dropped and you can barely dent the seeds with your fingernail.	\$3.15
V1206	Aunt Molly's Ground Cherry - (Physalis pruinosa) Approx 50 seeds per pack Days to Maturity=70 days	Small, golden fruits with papery husks (like tomatillos) and a sweet-tart, slightly citrus flavor, ripen a golden-orange and store up to 3 months in their husks. Great in hot desserts, even over ice cream. Harvest the ripe ones straight off the ground and graze in the garden. Originally from Poland. This unique variety is on Slow Food USA Ark of Taste.	\$3.35

Stock #	Product Name	Description	Price
V1442	Broadleaf Batavian Endive - (Cichorium endivia) Approx 200 seeds per pack Days to Maturity=85-90 days	Resembles a lettuce head, an old variety dating back to the 1860's. The wide, curling leaves form around a 10-12" tightly packed head with a well blanched, creamy heart. The heart will blanch to a creamy white while allowing an on-going harvest of the outer leaves. For the most tender and flavorful leaves, plant either early or late in the season to avoid the hot season.	\$3.15
V1297	Edible Chrysanthemum Seeds - (Chrysanthemum coronarium) Approx 45 seeds per pack Days to Maturity:=35-80 days	Yellow daisy flowers and tangy, nutritious leaves are used as flavoring and as greens, and the florets as a garnish. Also known as Shabu Shabu, Broadleaf, Shungiku and Chop-Suey Greens this is an easily grown addition to the garden.	\$3.15
V1280	Frisee Endive - (Cichorium endivia var. crispa) Approx 200 seeds per pack Days to Maturity=60 days	Rich in many vitamins and minerals, especially in folate and vitamins A and K, and is high in fiber. It has finely cut and narrow lacy leaves and is used extensively in gourmet salad blends for its texture, appearance and unique nutty flavor.	\$3.15
V1445	Garden Cress Seeds - (Lepidium sativum) Approx 150 seeds per pack Days to Maturity:=30 - 40 days	Cool-season salads, soups, and egg-salad sandwiches get a tangy, peppery boost from garden cress, also called pepper-grass or halim. This fast-growing annual herb is related to watercress and mustard, sharing their peppery, tangy flavor and aroma. Grow it like sprouts for the shoots, or in a container or garden bed for the mature leaves and stems.	\$3.15
V1527	Garden Huckleberry Seeds - (Solanum melanocerasum) Approx 50 seeds per pack Days to Maturity:=75-80 days	If you've ever wondered why pies in the South or those from small farming towns across Kansas or Nebraska taste so amazing, this just might be their secret! Garden huckleberries have been used for several generations for their tartness and flavor enhancing qualities in baking and desserts. Fast-growing, compact plants, usually growing up to 3 feet tall with huge yields of dark purple-black berries all summer long.	\$3.15
V1412	Golden Flax Seeds - (Linum usitatissimum) Approx 200 seeds per pack	Flax is both a fiber and a seed plant that has been grown since long before ancient Egyptian times. Flax grows about 4 ft tall on slender stems with long slender leaves. Flowers are almost always a shade of pale blue, occasionally white or bright red and each contain several seedpods. Will grow about anywhere in the US in a range of soils and climates. Prefers full sun and deep, fertile, well-drained soil for best productivity.	\$3.15
V1315	Green Leaf French Purslane Seeds - (Portulaca oleracea sativa) Approx 200 seeds per pack Days to Maturity:=45-60 days	Purslane has thick red succulent stems and fleshy leaves with small yellow flowers. A related plant with similar culinary uses is the North American Miner's Lettuce.	\$3.15
V1023	Pak Choi (White Stem) - (Brassica rapa v. chinensis) Approx 200 seeds per pack Days to Maturity=45 days	A baby type that is fast-growing, with vigorous, 7"- 8" plants of deep-green leaves, succulent and crunchy with a mild, mustardy flavor. One of the most used vegetables in various Oriental dishes due to its excellent flavor, texture and size. Harvested young, the plants can be cooked whole or halved. Even older stalks are tender enough to eat raw or lightly cooked, stir-fried, steamed, sauteed or in salads. Suitable for spring, summer and fall planting.	\$3.15
V1484	Pearl Millet - (Pennisetum glaucum) Approx 250 seeds per pack Days to Maturity:=120 days	Pearl millet has the largest seed heads and is the most widely grown type of millet for human food, having been grown in Africa and India since prehistoric times. Its deep root system makes it well adapted to drought conditions with low soil fertility and high temperatures. It also grows well in soils with high salinity or low pH.	\$3.35
V1408	Poha Ground Cherry - (Physalis peruviana) Approx 50 seeds per pack Days to Maturity=70 days	Also called Cape gooseberry, Inca berry, Aztec berry or Peruvian ground cherry is originally from high-altitude, tropical South America and is closely related to the tomatillo. With a flavor described as a sweet cherry tomato crossed with mango and pineapple while looking like an orange grape inside a paper lantern, it is a very tasty flavoring with many desserts and makes a great tropical substitute for apricot jam. Poha is eaten fresh from the garden, made into jam or canned with syrup.	\$3.35
V1419	Radicchio di Treviso Rossa - (Cichorium intybus) Approx 200 seeds per pack Days to Maturity=80 - 110 days	Famous and much-loved radicchio from Treviso, Italy just north of Venice.It forms long slender green leaves in summer that turn deep-red with white veins in cooler weather. This non-heading variety is crisp yet tender having a tart with a pleasingly slight bitter undertone. Can be overwintered for spring harvests.	\$3.15
V1454	Red Garnet Amaranth Seeds - (Amaranthus hybridus) Approx 150 seeds per pack Days to Maturity=50-120 days	Deep red, spoon-shaped to oval leaves. Stunning magenta flower spikes are harvested for grain and young leaves are used as a cooking green, similar to spinach. Plants grow from 4-8' tall, depending on soil quality. A popular choice A popular choice for sprouting, micro-greens, or in salad mix.	\$3.15
V1436	Salsify (Oyster Plant) - (Tragopogon porrifolius) Approx 50 seeds per pack	An unusual plant whose roots and leaves are eaten as a vegetable. Possibly originating in the Mediterranean, it is a member of the sunflower family. The roots store their carbohydrates as inulin instead of starch, which turns to fructose instead of glucose during digestion. This is ideal for diabetics as it reduces their glucose load.	\$3.35

Stock #	Product Name	Description	Price
V1447	Spicy Greens Seed Mix Approx 200 seeds per pack Days to Maturity:=75 - 80 days	A perfect mix of greens for use in your favorite salad, sandwich, stir-frys or eggs. Harvest the young sprouts, shoots and leaves for a different taste treat or let mature and enjoy the stronger flavors they offer. A tasty mix of Tatsoi, Mizuna, Arugula, Red Russian Kale seeds.	\$3.15
V1434	UC 72 Asparagus Seeds - (Asparagus officinalis) Approx 50 seeds per pack	Mary Washington UC 72 or Mary's Granddaughter was developed at UC Davis for better production and tolerance to Fusarium Wilt. Also tolerates heat and drought better than other varieties. Yields heavy dark green spears with with fairly compact heads.	\$3.35
	<b>Pea</b>	<b>Pea Approx 100 seeds per pack</b>	<b>Cowpea Approx 60 seeds per pack</b>
V1195	Oregon Giant Sugar Pod Snow Pea Seeds - (Pisum sativum var. sativum) Days to Maturity:=70 days	Sweetest and largest pods of the snow pea type. Dark green, unusually large pods and peas remain sweet and tender longer than most other varieties. Beautiful white flowered vines grow to 30" without support. Resistant to powdery mildew, pea enation mosaic virus, and fusarium. Bred by Dr. James Baggett of Oregon State University.	\$3.35
V1255	Alaska Pea Seeds - (Pisum sativum) Days to Maturity:=50-60 days	Alaska Pea - Earliest Pea The when introduced into the American market. Interestingly, the original variety has died out in Britain, but has continued to be extremely popular here in the States. Heavy yields of round straight pale green pods with small smooth skinned peas. Plants grows to about 3' tall. and does well in cool soils.	\$3.15
V1279	Mammoth Melting Sugar Pea Seeds - (Pisum sativum) Days to Maturity:=65-75 days	"Melting sugar" really does describe this beautiful edible mammoth snow pea. Large, sweet and tender, this delicious snow pea has held a place in home gardens for many years. Large pods grow 4-5" long on on 5' tall wilt resistant vines and bear heavily all season.	\$3.15
V1347	Sugar Ann Snap Pea Seeds - (Pisum sativum) Days to Maturity:=52-75 days	This pea has 24 - 30" vines that need no support, medium green 2 - 3" round blunt pods with 7 peas per pod. Similar to the Sugar Snap pea but 14 days earlier. These sweet pods freeze well.	\$3.35
V1467	Dwarf Sugar Pea Seeds - (Pisum sativum) Days to Maturity:=57-75 days	One of the earliest, dwarf edible sugar pod peas around. Popular for the colorful blossoms, shoots and leaves as well as its prolific crop of curved small snow pea pods that average 2 1/2 to 3" long. Plants are short 28 to 36" tall and very often don't need staking, making this an excellent choice for a smaller or container garden. The flowers are very attractive and resemble sweet peas with clusters of flat, fleshy, curved, semi-pointed pods growing at the tops of the plants for easy picking. Fusarium wilt resistant.	\$3.15
V1422	Little Marvel Pea Seeds - (Pisum sativum var. sativum) Days to Maturity:=58 - 64 days	Reading, England and first sold in the US in 1908. Heavy producer of fine quality 3" pods each having 6 - 9 memorably sweet peas per pod over an extended season. Also known as Improved American Wonder or Extra Early Little Marvel. This old dependable variety is what home gardens used to count on for their peas. Excellent fresh table quality and also very good for freezing. Holds very well on the vine and stays sweet even when fully mature.	\$3.15
	<b>Pepper Hot</b>	<b>Approx 25 seeds per pack</b>	
V1088	Beaver Dam Hot Pepper Seeds - (Capsicum annum) Days to Maturity:=80 days	A Hungarian heirloom pepper brought to Beaver Dam, Wisconsin in 1912 by the Joe Hussli family. Tapered fruits are crunchy and mildly hot when seeded. They mature from lime-green to deep red. The peppers have an excellent flavor and are sturdy enough to lend themselves to stuffing as well as eating raw, pickling, fresh or canned salsas or sauces.	\$3.55
V1092	Pimiento de Padron Hot Pepper Seeds - (Capsicum annum) Days to Maturity:=55-85 days	Thin-skinned sweet frying pepper, the 2" long green fruits that may become spicy from Padron, Spain. Traditionally used for delicious snacks or "tapas" when young. Picked when the peppers are about the diameter of an olive, the pods are fried whole in olive oil and sprinkled with sea salt. One in every few is spicy, so you never know when you'll get a surprise ("Spanish Roulette"). Make sure to pick them small, as larger, more mature peppers are always hot. Superb on sandwiches, as salad toppings, or to perk up other vegetables.	\$3.35
V1095	Poblano/Ancho Hot Pepper Seeds - (Capsicum annum) Days to Maturity:=75 days	This thick-walled stuffing pepper is 4" x 2 1/2" at shoulder and turns from black-green to red-brown when ripe. Concentrated fruit set on beautiful 2-3' tall plants. Known as the Poblano pepper when fresh and Ancho pepper when dried. When dried, the distinctive, earthy flavor and aroma are the substance of a memorable chile powder. A favorite in Mexican cuisine, used in sauces, stews and of course for stuffing.	\$3.35
V1096	Anaheim Hot Pepper Seeds - (Capsicum annum) Days to Maturity:=70-90 days	Fairly sweet, only slightly spicy, this pepper is a good producer. It is the most dependably mild, large stuffing pepper. Broad shouldered thick fleshed fruits that taper to a blunt, rounded tip and ripen from dark green to a true red. Classic chile for chile rellenos.	\$3.15

Stock #	Product Name	Description	Price
V1104	Pepperoncini Hot Pepper Seeds - (Capsicum annuum) Days to Maturity:=62-75 days	This Milanese strain of an old Greek variety is unparalleled for purity and productivity. Large yields of thin 2 - 4" long, lime-green fruits stay sweet until late maturity. Harvest when green for fresh eating or for the legendary canned/pickled peppers used in pizzas, salads and sandwiches. Plant is excellent in cold climates with short seasons.	\$3.15
V1238	Lemon Drop Hot Pepper Seeds - (Capsicum chinense) Days to Maturity: 100 days	For those who love their chile heat with a citrus tang, this is the pepper to know and grow. Also called Aji Limon or Lemon Chile and very popular as a seasoning in Peru and across South America, it's difficult to find elsewhere. Very highly productive - often growing 100 peppers each - these are robust, hardy and compact, growing 2 - 3 feet tall and covered with 2 1/2 inch long fruit. The leaves are dark green and narrow, shading the lower plant well. Young fruit start out green and upright, becoming pendant as they ripen into their signature bright yellow color.	\$3.55
V1284	Cayenne Long Slim Hot Pepper Seeds - (Capsicum annuum) Days to Maturity:=70-75 days	Long, slender, wrinkled, very hot, thin-walled 5-6" long peppers ripen from dark-green to bright-red. These peppers are very easy to dry. Bountiful production is perfect for pickles, canning, drying and using fresh for a bright, hot flavor in cooking.	\$3.15
V1285	Pasilla Bajio Hot Pepper Seeds - (Capsicum annuum) Days to Maturity:=75-80 days	These mildly hot, slightly sweet very distinctive slender 8-14" peppers ripen from dark green to red then to brown. Fully ripe they have a unique rich and full flavor. One of the key ingredients in mole, a signature Mexican holiday sauce from the Oaxaca region. Also known as Chile Negro, or Chilaca.	\$3.15
V1286	Serrano Tampiqueno Hot Pepper Seeds - (Capsicum annuum) Days to Maturity:=75-80 days	Club shaped medium hot smooth peppers have medium thick walls and ripen from green to bright red. Classic fresh, market and pickling pepper. Serrano Tampiqueno means "from the mountains", first grown in mountains around Puebla and Hidalgo, Mexico.	\$3.15
V1308	Concho Hot Pepper Seeds - (Capsicum annuum) Days to Maturity:=80-90 days	The plants are short and bushy, not over 2' with a thin skinned 4-5" peppers with medium heat that subsides quickly. The veins and ribs are extremely hot. The Concho pepper is a very unique and little known chile from Concho, AZ. It is a New Mexican type, similar to the land-race varieties Chimayo or Espanola.	\$4.00
V1414	Jalapeno M Hot Pepper Seeds - (Capsicum annuum) Days to Maturity:=72 - 75 days	Sausage-shaped, blunt-ended peppers have thick walls, they are 3 1/2 long and 1 1/2" thick that ripen from a dark green to a brick red, with the flavor deepening as it turns color. Plants are upright, dark green with good leaf cover and grow 26 - 36" tall. Fruits are pendant.	\$3.15
V1460	Chile de Agua Hot Pepper Seeds - (Capsicum annuum) Days to Maturity:=75-85 days	A triangular, conical shaped pepper about 4" long and 1 - 1 1/2" wide at the shoulders, tapering to a pointed tip. The skin is shiny, smooth and slightly wavy with a moderately thick flesh which is spicy and very flavorful, while the ribs are much hotter. The chiles grow erect or pointing upwards and can be prolific in the right conditions.	\$4.25
V1490	Tabasco Hot Pepper Seeds - (Capsicum frutescens) Days to Maturity:=90 days	These highly prolific peppers have a surprising heat level that comes on immediately and lasts longer than expected. The 2" long peppers grow upright on bushes, ripening from yellow through orange to a bright fire-engine red. They are the only frutescens variety known with "juicy" fruits, not dry on the inside like all others, perfectly suited to fermenting!	\$3.15
V1360	Espelette/ Basque Hot Pepper Seeds - (Capsicum annuum) Days to Maturity:=80-90 days	The treasured chile of the Basque country, known for its robust and slightly smoky flavor. Some chiles are given treasured status, where they are celebrated in art, the kitchen, and festivals. The The Espelette Pepper has become a cultural and culinary icon in the Basque country where it has gained controlled-name status.	\$4.00
V1524	Chilhuacle Rojo Hot Pepper Seeds - (Capsicum Annuum) Days to Maturity:=70-80 days	Medium-hot with a rich, robust, earthy, slightly smoky-sweet flavor that lasts on the tongue, chilhuacle rojo is a foundational ingredient in authentic Oaxacan dishes like mole coloradito. Pods are thin-walled and broad-shouldered, growing 1 1/2 inches across and 2-3 inches long on short, sturdy plants about 2 feet tall. They can vary in shape from almost bell pepper to broad-shouldered and tapered.	\$4.00
	<b>Pepper Sweet</b>	<b>Approx 25 seeds per pack</b>	
V1101	Bull Nose Sweet Pepper Seeds - (Capsicum annuum) Days to Maturity:=55-80 days	A very early bell pepper with uniform ripening that turns from green to bright scarlet red that is both sweet and a little spicy. A prolific producer, great fresh or stuffed. Indentation on blossom end resembles a bull's nose. An heirloom pepper from India around 1759, it was grown by Thomas Jefferson. Amelia Simmons refers to these peppers in her 1796 American Cookery (said to be the first American cookbook).	\$3.35
V1103	Jupiter Sweet Pepper Seeds - (Capsicum annuum) Days to Maturity:=65-75 days	High yields of jumbo, 4-lobed, thick green walls that ripen to a deep red. Sweet fruits with a full pepper flavor that expresses well in pasta sauces and stir fries. Yields well until frost. Widely adapted. Tobacco Mosaic Virus tolerant.	\$3.35

Stock #	Product Name	Description	Price
V1105	Lipstick Sweet Pepper Seeds - (Capsicum annuum) Days to Maturity:=55-75 days	A very early specialty pepper, 5" cone shaped fruits ripen a glossy, rich lipstick red. Dependably early, heavy yields even in cool summers. One of the most delicious and sweetest peppers on the market. This pepper has very few seeds. Excellent for salsa, salads, cooking, and roasting. Perfect for home gardens and market growers.	\$4.25
V1523	California Wonder Red Sweet Pepper Seeds - (Capsicum annuum) Days to Maturity:=68-89 days	After nearly a century, this is still the standard by which all other bell peppers are judged, and widely considered the best in class. Since being introduced in 1928 the peppers are always well-formed with sweet-flavored, thick-fleshed fruits beginning as glossy green, three- to four-lobed blocky globes that mature to a bright red. Pick either at the green, yellow-orange or red stage for different flavors. Easily becomes the go-to staple for stuffing, chopping into salads, roasting, or grilling.	\$3.15
V1465	Hungarian Sweet Wax Pepper Seeds - (Capsicum annuum) Days to Maturity:=65 days	These prolific plants are upright growing 16 - 24" tall with fruit that is pendant about 6" long and 2" in diameter, tapering to a blunt point. The flesh is thick, sweet and mild with a waxy looking skin ripening from pale green to yellow to orange to red. They are wonderful eaten out of hand in the garden during the summer and their sweetness comes through in pickling or freezing. The flavor deepens and becomes more sweetly complex as it ripens. Also known as Hungarian Stuffing Peppers.	\$3.15
V1353	Jimmy Nardello Sweet Pepper Seeds - (Capsicum annuum) Days to Maturity:=65-75 days	These cherished heirloom peppers have a very slightly spicy, smoky yet sweet and fruity flavor from their slender, tapering, wrinkled 6 - 10" long pods that turn from bright green to a fire-engine red when they are ready for harvest. Plants are low growing, 24" tall and highly productive. This Italian frying pepper was brought from Ruoti, in the Basilicata region of southern Italy by the family of Giuseppe and Angela Nardello in 1887, and grown here ever since. Their son Jimmy continued the tradition and kept the treasured variety alive by saving seeds.	\$3.35
V1106	Melrose Sweet Pepper Seeds - (Capsicum annuum) Days to Maturity:=70 days	A treasured sweet Italian frying pepper, 3 - 4" long, turns from dark green to rich, crimson red. Joseph and Lucia Napolitano brought a handful of their beloved sweet pepper seeds to Melrose Park, IL in 1903 from their little community of Nocera Inferiore, just southeast of Naples, Italy. They've become the most anticipated and beloved sweet peppers each season for Italian-Americans in Melrose Park and their descendants. Versatile in all stages, when grown in rich soil it is sweet as candy when red. Sweetness is present raw or cooked, and memorable when grilled. Plants are loaded with fruit to keep you supplied. Holds its own alone or can blend with other vegetables.	\$4.25
V1520	Cubanelle Sweet Pepper Seeds - (Capsicum annuum) Days to Maturity:=62-70 days	This beloved Caribbean sweet frying pepper has also won both Italian and Spanish hearts and taste buds. Known as "Friarelli" in Naples, Italy and "Aji Cubanela" in Spain. With an unmistakable sweet flavor with just a hint more spice than typical bell	\$3.15
	<b>Pumpkin</b>	<b>Approx 25 seeds per pack</b>	
V1112	Galeux d'Eysines Pumpkin - (Cucurbita maxima) Days to Maturity=95-100 days	This peach colored French pumpkin is shaped like a wheel of cheese and covered with pebbly bumps and filled with firm, tender, very sweet bright orange flesh. First sold commercially in New York State in the mid-19th century, and now regaining it's popularity. Beautiful, ancient, 10-20 lb. variety sought in France and now here, for soups, gratins, purees, preserves, tarts or pies! Long keeper and very decorative for table centerpieces. The warts are caused by the high sugar content of the flesh causing the skin to crack and grow the warts as a defensive mechanism.	\$3.35
V1115	Jarrahdale Pumpkin - (Cucurbita maxima) Days to Maturity=95-100 days	Very rare in the US, but one of the most beautiful, unusual, tastiest and superb eating pumpkins! 12-20 lbs. blue grey fruits with heavy, deep ribs. Dense, sweet, string-less flesh is of the highest quality. Keeps well in extended storage. High yields. Originally from Yates and Co, Australia.	\$3.35
V1119	Tonda Padana Pumpkin - (Cucurbita maxima) Days to Maturity=95-105 days	A beautiful Italian pumpkin from the Po River Valley with alternating vertical ribs of grey, green and orange. Wonderful dry, sweet flesh is superior for making pies, great soups, gnocchi, and breads. Unusual and attractive enough to be used as a centerpiece.	\$3.35
V1326	Connecticut Field Pumpkin - (Cucurbita pepo) Days to Maturity=100-120 days	A popular variety for carving and baking, known as Southern Field, Big Tom, Large Yellow and Halloween. This is what comes to mind when you think pumpkin. Fruit is medium orange to yellow-orange in color, 10-14" tall and 12-15" in diameter. Weight averages 15-25 lbs with a smooth, hard slightly-ribbed thin bright rind. The flesh is deep-yellow to lightly orange, coarse and sweet.	\$3.35
V1474	Cinderella Pumpkin - (Cucurbita pepo) Days to Maturity=84-115 days	This pumpkins produce flattened round 10 inch pumpkins weighing 15 - 25 lbs. on bush vines like summer squash. Needs only 6 sq ft of well-drained soil to grow, will usually produce 2 fruit per plant.	\$3.35
V1243	New England Sugar Pie Pumpkin - (Cucurbita pepo) Days to Maturity=80-118 days	This is the classic Pie Pumpkin. It has small 4-5 lb. round slightly flattened, light ribbed orange globes, sweet yellow flesh. Prized since the 1860's.	\$3.35

Stock #	Product Name	Description	Price
V1363	Jack Be Little Pumpkin - (Cucurbita pepo) Days to Maturity=85-110 days	Has small but very vigorous vines that produce 8 to 20 delightful miniature pumpkins per plant. 2 in. tall and 3-6 in. diameter, weighing 3-8 oz each, these flattened deeply ribbed fruits have deep orange-red rind and flesh. They are delicious, but used mostly as seasonal decorations. Storage life is up to 12 months when cured fully on the vine.	\$3.35
V1364	Musque de Provence Pumpkin - (Cucurbita moschata) Days to Maturity=120 days	A gorgeous French heirloom that averages about 15 - 20 pounds each and is deeply ribbed, looking exactly like fairytale pumpkins in children's storybooks. Originating in the south of France, they were introduced to the US by Vaughan's Seed Store of Chicago in 1899.	\$3.35
V1453	Lady Godiva Pumpkin - (Cucurbita pepo) Days to Maturity=100 - 110 days	Developed by Allan Stoner of the USDA Agricultural Research Service in 1972 for the hullless seeds as a snack food. He combined two other naked seed pumpkin lines for better flavor and production. The naked or hullless greenish seeds.	\$3.55
	<b>Radish</b>	<b>Approx 300 seeds per pack</b>	
V1122	Gourmet Radish Blend Seeds - (Raphanus sativus) Days to Maturity:=25-35 days	A mix of at least 11 old-fashioned varieties including reds, pinks, whites, bi-colors and blacks, in both round and long shapes. Early and late maturing varieties spread the harvest over many weeks. Plant spring and fall.	\$3.15
V1123	Japanese Minowase Radish (Daikon) Seeds - (Raphanus sativus) Days to Maturity:=45-58 days	An early pure-white tender roots are 3 in. in diameter and to 1 or 2 ft. long. Sweet, white crispy flesh with a unique flavor. Fresh favorite in Chinatown markets. Sow in summer or fall.	\$3.15
V1495	French Breakfast Radish Seeds - (Raphanus sativus) Days to Maturity:=20-30 days	Sweet, Crunchy, Cylindrical Roots Also known as Breakfast radish, Flambeau, Flambo and Les Radis Petit D'jeuner both the root and leafy greens of this radish are eaten.	\$3.15
V1369	Purple Plum Radish Seeds - (Raphanus sativus) Days to Maturity:=25-30 days	This very unusual radish has bright purple to burgundy skin covering firm white flesh with a crisp, sweet and mild flavor all season long. Roots are 1 - 2 in diameter. Never pithy or hot, hardy and adaptable. Holds well after harvesting and is very crack resistant. Plum-shaped roots with dark green full-bodied leaves. Unusual color is rarely found in radishes, makes a beautiful garnish or addition to multi-colored radish bunches. Slice or grate for a colorful addition to salads or sandwiches.	\$3.15
V1332	Easter Egg Blend Radish Seed Mix - (Raphanus sativus) Days to Maturity:=20-30 days	This mix has a beautiful range of colors showcasing the round radish. From almost white through pink, shades of red and into purple the range of colors draw people in. Pink Beauty, Purple Plum, White Beauty, German Giant and several other varieties were selected to create this blend. Great for the home gardener as well as the market or CSA grower, these radishes will put a lot of color out! For continual harvests, re-plant every two weeks during warmer weather.	\$3.15
V1339	Black Spanish Round Radish Seeds - (Raphanus sativus) Days to Maturity:=53-80 days	Very old heirloom radish, grown in Spain since at least the 16th Century and probably long before. It was first introduced around 1824, and is still a very popular choice for a winter radish. Sow in late summer or early fall. They will keep all winter stored in moist sand.	\$3.15
V1124	Watermelon Radish/Red Meat Winter Seeds - (Raphanus sativus) Days to Maturity:=50-60 days	This unique 4" ball-shaped root with white skin and watermelon-red flesh are crispy, mild and sweet. Put in salads, cider vinaigrette, sprinkle on soups, hot pasta or poached fish. Slice and sprinkle with black sesame seeds for a tasty treat. Bolts quickly after spring sowing, harvest quickly and sow again for autumn plantings.	\$3.15
	<b>Rhubarb</b>	<b>Approx 100 seeds per pack</b>	
V1216	Victoria Rhubarb - (Rheum rhabarbarum)	Large, fat, brightly colored stems that are non stringy with a tart, apple-gooseberry flavor followed by a hint of citrus. Introduced in 1837 by Joseph Myatt in Deptford, England and named in honor of Queen Victoria, this cultivar put rhubarb on the dessert map. According to many gardeners and chefs, Victoria has not been surpassed or improved since its introduction.	\$3.15
	<b>Spinach</b>	<b>Approx 100 seeds per pack</b>	
V1128	Red Aztec Spinach/Huauzontle - (Chenopodium berlandieri) Days to Maturity=60 days	Has few equals as a summer spinach crop as heat only produces a larger crop of leaves. Found in archeological digs of Natives of the New World all the way from the Aztecs of tropical Central America, north and east into the southern Appalachian cave-sheltering tribes. Lower leaves turn bright red as they mature and hold their color in cooking (only 30-60 seconds in boiling water). Seed-heads can be stir-fried and the seeds can be used for red tortillas or sprouts (red sprouts!)	\$3.55

Stock #	Product Name	Description	Price
V1129	Giant Nobel Spinach - ( <i>Spinacia oleracea</i> ) Days to Maturity:=40-56 Days	With large, green, thick, gently savoyed leaves with rounded tips and almost sugar-sweet, thin stems Giant Nobel is the best of the thick-leaved varieties. Hardy, vigorous, spreading, resistant-to-bolting, it is a reliable producer. Good choice for home and market gardens and for canning. Introduced in the Netherlands in 1926, it was an "All American Selection" winner in 1933, and remains a very popular spinach today. One of the few spinach varieties that will do well in both the cold and the heat, it is a good early season choice as it becomes sweeter with cooler weather yet also tolerates the heat longer than many others, resisting bolting and becoming bitter longer.	\$3.15
V1130	Red Malabar Spinach - ( <i>Basella rubra</i> ) Days to Maturity=70 days	A beautiful, tropical vining plant with a gorgeous red stem and thick, dark green, heart-shaped leaves. While not a true spinach, it is remarkably spinach-like in flavor, and is better suited to summer growing than spinach since it loves hot, humid weather. Ideal for soups, salads and stir fries. Other names include basella, ceylon spinach, climbing spinach, Surinam spinach, Indian spinach, slippery vegetable, Malabar nightshade, vine spinach, and vine vegetable. In Japanese restaurants breaded and fried leaves are often served as appetizers. Heat tolerant, this burgundy and green vine is effective in displays, like the agriculture one at Epcot Center.	\$3.35
V1131	Spinach-Beet Greens/Bietina/Bieta Seeds - ( <i>Beta vulgaris</i> spp.) Days to Maturity:=60 days	Have large soft, green leaves on very thin stems on bushy 2' plants. This unusual and highly regarded chard is very productive, incredibly sweet and tender. This warm weather spinach substitute withstands heat, producing well until heavy frost. Pick outer leaves to get a constant supply of tasty greens from May through fall. Spinach beet green leaves look similar to Swiss chard however the stems are thinner and the exceptionally tender leaves are smooth, not puckered. Unlike other chards, it has a sweeter, more spinach-like flavor that lingers pleasantly on the palette. Unlike spinach, it lasts and produces from June through hot weather into fall, even withstanding light to moderate frosts.	\$3.55
V1296	Green Malabar Spinach - ( <i>Basella alba</i> ) Days to Maturity=75 days	Big glossy bright-green leaves, tender 1/2" stems, will climb 6-10' in warm climates. While not a true spinach, it is remarkably spinach-like in flavor, and is better suited to summer growing than spinach since it loves hot, humid weather. Ideal for soups, salads and stir fries.	\$3.35
V1333	Bloomsdale Spinach - ( <i>Spinacia oleracea</i> ) Days to Maturity:=39-60 days	The Long Standing Spinach Early, glossy dark green, savoyed leaves are exceptionally tender and richly flavorful. Bloomsdale can be sown in spring or fall, plants are vigorous, upright and slow to bolt in hot weather. Also known as Long Standing Spinach it was introduced by the D. Landreth Seed Company in 1826, and is the most popular home gardener spinach sold.	\$3.15
V1373	New Zealand Spinach - ( <i>Tetragonia expansa</i> ) Days to Maturity=50-70 days	Not a true spinach but similar in flavor and use. It is also known as tetragonia, ice plant, everbearing spinach, everlasting spinach and perpetual spinach. This warm season green is good for summer salads, as it thrives in hot weather, won't bolt or get bitter. A New Zealand native that was first brought to Europe by Captain Cook in the 1770s after he discovered it to be a valuable source of vitamin C.	\$3.15
V1132	Strawberry Spinach - ( <i>Chenopodium capitatum</i> ) Days to Maturity=45 days	Tender, fast-growing green with a delicate flavor have a triangular shape, pleasant texture green, spiky edges and grow in pretty, open rosettes. Use them raw (good mesclun ingredient) or cooked like spinach and chard. As a bonus, mature plants produce 1/2" ruby-colored fruits or "berries" which are cheerful as well as edible, and can be mashed, in quantities, to make a juice or to color other foods. Plants love heat and the leaves are an excellent addition to summer salads. They're also attractive enough to grow in garden borders or containers.	\$3.35
<b>Sprouts</b>			
V1288	Alfalfa Sprouting Seeds	Mild flavor, good crunch, great nutrition and easy to grow makes them a perennial favorite. Home grown Alfalfa sprouts are one of the best and easiest ways to have incredible flavor and nutrition in almost no space at any time of the year. In as little as 4-6 days you can have fresh sprouts that taste better and have more nutrients, antioxidants and amino acids than almost any other food. Add to sandwiches, eggs, salads, sprinkle on soups, or substitute for any other greens when they are out of season.	1 LB \$17.30 4oz \$4.35
V1394	Sandwich Mix Sprouting Seeds	One of the best and easiest ways to have incredible flavor and nutrition in almost no space at any time of the year. In as little as 4-6 days you can have fresh sprouts that taste better and have more nutrients, antioxidants and amino acids than almost any other food. Add to sandwiches, salads, sprinkle on soups, or substitute for any other greens when they are out of season.	1 LB \$15.30 4oz \$4.10

Stock #	Product Name	Description	Price
V1395	Radish Sprouting Seeds	Tiny but have all of the flavor of full grown radishes. If you like the flavor of radishes, you'll love the Organic Radish Sprouts. Sprouts are one of the best and easiest ways to have incredible flavor and nutrition in almost no space at any time of the year.	1 LB \$16.30 4oz \$4.10
V1396	Mung Bean Sprouting Seeds	The most-grown and consumed sprout in Asian countries, as they are used widely in Asian cooking. You can grow them smaller with a more delicate flavor, or larger with thicker roots for a more nutty and robust flavor. Sprouts are one of the best and easiest ways to have incredible flavor and nutrition in almost no space at any time of the year.	1 LB \$16.30 4oz \$4.10
V1488	Red Clover Sprouting Seeds	Fast becoming a very popular salad and sandwich sprout, very similar to alfalfa sprouts with a mild flavor with a hint of sweetness. Red clover sprouts have similar size and look with a milder taste. Easy to grow with a mild crunch and serious nutrition, red clover produces a beautiful, lighter green sprout than alfalfa. More people prefer the taste of clover to alfalfa for its mild sweetness with not perceived bitter aftertaste.	1 LB \$9.30 4oz \$3.55
	<b>Squash</b>	<b>Approx 25 seeds per pack</b>	
V1134	Benning's Green-Tint Scallop Squash - (Cucurbita pepo) Days to Maturity=47-56 days	May be the best tasting summer squash available. High yields of pale green, pie shaped scalloped fruits with sweet, fine textured, pale green flesh on a semi open bush. Fruits are most tender at 2"-3" size and excellent grilled. Variety dates to 1914.	\$3.15
V1135	Black Beauty Zucchini Squash - (Cucurbita pepo) Days to Maturity=60-63 days	This early, glossy black green fruits have very tender, firm creamy white flesh with an excellent flavor. Most tender and flavorful under 8". Very early and productive, excellent freezer variety. Strong vines produce continual yields to keep you and your neighbors happy.	\$3.15
V1137	Cocozelle Zucchini/Costata Romanesca - (Cucurbita pepo) Days to Maturity=50-60 days	A rich flavored zucchini that is deep green when young, but ribbed with yellow stripes when mature. Originally from Italy; called "Cocozelle di Napoli" in the 1800s. Growing tips: Sow 5 seeds per hill, 4 feet apart. Thin to best 2-3 plants.	\$3.15
V1264	Early Summer Crookneck Squash - (Cucurbita pepo) Days to Maturity=42-60 Days	This squash dates to the pre-Columbian era. Smooth light yellow fruits have curved neck and mature to a light orange with warts. Pick at 5-6" for best flavor - creamy sweet mild flesh.	\$3.15
V1266	Australian Butter Squash - (Cucurbita maxima) Days to Maturity=90-100 days	Prolific, tasty and a versatile winter squash. 12-15 lbs. with a small seed cavity and a great keeper. Excellent for baking with its pumpkin shape and thick orange flesh and hard shell. The flesh is creamy, stringless and lends itself to many cooking methods.	\$3.15
V1268	Vegetable Spaghetti Squash - (Cucurbita pepo) Days to Maturity=70-115 days	Rounded cylindrical buff-tan fruits are 8-12 in. long and 5-6 in. diameter. 5-7 grow per plant, and are mature when skin color changes from cream to buff, will keep up to 6 months. Boiled or baked, the flesh flakes out in spaghetti like strands.	\$3.15
V1361	Papaya Squash - (Cucurbita moschata) Days to Maturity=90 days	An incredibly smooth and thick fleshed, sweet and nutty flavored papaya shaped squash that is gorgeous and vibrant yellow. Ideal for stuffing. One of the most popular Asian winter squashes, but unknown here. Vining plants bear abundant 2-4 lb. squash that keep well. Great winter squash variety for home gardens and market growers.	\$3.35
V1365	Golden Zucchini Squash - (Cucurbita pepo) Days to Maturity=50-55 days	An easy to grow 3-4 ft. tall bush plant bearing bright-golden, medium long and slender cylindrical fruits and best when picked 6-8 in long. Excellent flavor, fruit is creamy white inside. Great for gardens with limited space. A versatile summer treat from your garden, not as productive as the green zucchinis but with more flavor. Side dress with fertilizer when fruits form to increase yield.	\$3.15
V1366	Table Queen Bush Acorn Squash - (Cucurbita pepo) Days to Maturity=80-95 days	A runnerless true bush type with plants 36 in. diameter. Loads of green, deeply ribbed, acorn-shaped fruits similar in all respects to Table Queen, but with a smaller footprint in the garden. 3-8 fruits per plant, 5 x 4 in., very productive in a small space, fair keeper, widely adapted, orange flesh cooks dry and sweet. Great winter squash variety for home gardens and market growers.	\$3.15
V1367	Waltham Butternut Squash - (Cucurbita moschata) Days to Maturity=83-115 days	One of the most popular butternuts. It is uniform in shape and size, good interior texture and color, 8-12 x 3-5 in., weighing 3-6 lbs., smooth light tan skin, thicker cylindrical necks, small seed cavity, rich dry yellowish orange flesh, nutty flavor, vigorous vines, high yields, stores great.	\$3.15
V1404	Zappallo de Tronco Squash - (Cucurbita maxima) Days to Maturity=60 days	A summer squash with an edible rind. Can be eaten whole when small (2½-4 inches) as a summer squash or left to mature to the fully ribbed state and used as a winter squash. Very popular for farmers markets. Drought-tolerant and quick maturing.	\$3.75

Stock #	Product Name	Description	Price
V1413	Burgess Buttercup Squash - (Cucurbita maxima) Days to Maturity=85 - 110 days	Flattened turban type, 5 - 8 inches in diameter 3 - 5 lbs. with thin hard dark-green rind, slight ribs and a distinctive blossom-end button. Very sweet medium-orange, fine quality, stringless, fiberless flesh with a small seed cavity. Excellent for steaming, baking, stews or soups. Makes a great alternative to mashed sweet potatoes or pumpkin pie filling. Originally introduced by Burgess Seed Co. in 1932, it has become the standard for all Buttercup squash.	\$3.15
V1479	Yellow Bush Scallop Squash - (Cucurbita pepo) Days to Maturity=49-54 days	An excellent producer in home gardens with a very old history that few know about. Delicate and tender when young, growing to a more mature yet still mild flavor when full sized, this is one of the larger pattypan varieties.	\$3.15
V1138	Tonda Nizza Squash - (Cucurbita pepo) Days to Maturity=45 days	Tonda Nizza Squash or "Round of Nice" Early maturing, round, light-green thin-skinned fruits for grilling, stuffing, frying or using in parmigiana instead of eggplant. Pick these "courgettes" at golf-ball size and up before skin begins to darken. The more you pick, the more you get. Deliciously different bush variety with a flavor all its own.	\$3.15
	<b>Strawberry</b>	<b>Approx 30 seeds per pack</b>	
V1258	Alpine Strawberry 'Yellow Wonder' Seeds - (Fragaria vesca) Days to Maturity=100-120 to fruit	Among the most productive varieties, the fruit is very tasty with the "melt in your mouth" flavor and a strong aroma. The best thing about this variety and other yellow/white varieties is that the birds leave them alone. The compact, heavy blooming, runnerless perennial plants produce large amounts of fragrant and tasty strawberries continuously from spring through fall.	\$4.50
V1400	Alpine Strawberry 'Fragola Quattro Stagioni' (Four Season) Seeds - (Fragaria vesca) Days to Maturity=100-120 to fruit	An Italian everbearing hardy red variety with slightly larger fruit than other Alpines and good production. Everbearing means production till a hard frost. The compact, heavy blooming, runnerless perennial plants produce large amounts of fragrant and tasty strawberries continuously from spring through fall. Space the plants at least 18" apart or use a very large container for maximum production. Superb in containers. Will often naturalize in partly shaded well watered areas of your garden.	\$4.50
	<b>Swiss Chard</b>	<b>Approx 100 seeds per pack</b>	
V1249	Fordhook Giant Swiss Chard Seeds - (Beta vulgaris var. cicla) Days to Maturity:=50-60 days	Broad dark green heavily crumpled leaves with white veins and thick stalks, excellent greens. Grows 24 - 28" tall with 2 1/2" wide stalks. Abundant producer all season, even after light frosts. Introduced commercially in 1934 by W. Atlee Burpee & Co.	\$3.15
V1250	Rainbow Swiss Chard Seeds - (Beta vulgaris ssp. cicla) Days to Maturity:=60 days	Beautiful technicolor mixture of shades of red, orange, purple, yellow and white leaves. Very colorful, tender and tasty. Makes a great edible ornamental. An Australian heirloom. Tolerates light frost, great producer all season long.	\$3.15
V1478	Barese Swiss Chard Seeds - (Beta vulgaris var. cicla) Days to Maturity:=26-28 days	A baby leaf variety, bred specifically for the baby greens market. It grows quickly with glossy, smooth dark green leaves with slightly curled edges on thick white stems that hold up well in a baby leaf mix for market growers, or home gardeners. Baby leaves are ready for harvesting in 26 - 28 days, but it is also very good when allowed to grow out to maturity. This variety of chard matures exceptionally early and is a very prolific producer. Like all Chards, it is tolerant of cold but is also fairly adaptive to heat, especially if grown in a shaded area with mulch to drop the soil and root temperatures.	\$3.15
V1292	Red/Rhubarb Swiss Chard Seeds - (Beta vulgaris var. cicla) Days to Maturity:=50-60 days	Dark green heavily crumpled leaves contrast with deep crimson stalks and leaf veins. Beautiful and striking colors from this 1857 heirloom.	\$3.15
	<b>Tomato - Beefsteak</b>	<b>Approx 25 seeds per pack</b>	
V1143	Aunt Ruby's German Green Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=80-95 days	Good yields of colossal juicy beefsteak 12 - 16 oz light green tomatoes when ripe with a tint of yellow and pick blush underneath, with a sweet complex lingering taste. The most popular "green" tomato because of its complex flavors. Flavors have been described as "sweet, intricate, fruity and lime" with a refreshing spicy aftertaste.	\$3.15
V1147	Black Krim Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=69-90 days	Large, 10 - 14 oz. dark red-purple beefsteak tomatoes with green shoulders sets well in heat and produces under adverse conditions. It turns blacker with more heat. The most reliable and prolific of the legendary "black" tomatoes from the Ukraine.	\$3.35

Stock #	Product Name	Description	Price
V1471	Box Car Willie Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=80 days	This New Jersey tomato variety has abundant yields of slightly flattened, 10 - 16 oz round red to reddish-orange fruits with an excellent sweet-tart flavor that is crack free and disease resistant. The heavy leaf cover helps to protect the fruits from sun scald and cracking.	\$3.15
V1423	Cherokee Purple Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=72 - 90 days	Short vines with purple-pink-brown thick-skinned fruits with flattened globed fruits 12 - 16 oz in size. Highly flavorful with a rich, sweet, smoky, earthy flavor that lingers. A perennial taste-test winner introduced by Craig LeHoullier from seeds given to him by J.D. Green of Tennessee, who said it had been grown for more than 100 years by the Cherokee nation. Very prolific producer.	\$3.15
V1189	Cosmonaut Volkov Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=72-75 days	Early season large 6 -12 oz red fruit with sweet rich full bodied flavor. Underestimated variety, much earlier, incredibly productive and tastier than many others. Old time flavor with a sharp edge. Disease resistant, does well in cold summers or poor soils, yet produces well in hot weather. Unusually large tomatoes for an early season variety.	\$3.55
V1472	Cuostralee Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=72-82 days	French beefsteak tomato that produces consistently high yields of meaty red ribbed fruit averaging 4" across and in the 1-2 lb range. The fruit is meaty with small seed cavities, juicy without being loose or mealy. Excellent rich and sweet-tangy old-fashioned beefsteak tomato flavor. Excellent slicing, salad or sandwich tomato. Large vines grow lots of foliage that helps protect the very large tomatoes from the sun. Heavy trellising or staking is needed to keep the vines healthy and producing.	\$3.15
V1473	Dutchman Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=80-110 days	Large flat dark pink to purple-pink fruits up to 2 - 3 lbs with a mild sweet flavor, an old-fashioned strain from 1920 or earlier. The fruit is about twice as wide as deep with almost solid flesh with few seeds, mid-season and prefers warmer summers.	\$3.15
V1168	Mortgage Lifter Red Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=80-83 days	An improved version of the famous classic tomato that has more disease resistance and higher yields of 10 - 14 oz. luscious, meaty, dusky-pink tomatoes with few seeds. The perfect sandwich tomato all summer long.	\$3.55
V1150	Red Brandywine Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=80-100 days	Good yields of 8-12 oz. large deep red fruits with superlative flavor, one of the standards of heirloom tomatoes. Disease tolerant, regular leaf Amish heirloom tomato from 1800s, named after Brandywine Creek in Chester County PA.	\$3.15
V1428	Zapotec Ribbed Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=80 - 90 days	A captivating pleated or ribbed somewhat flattened pear shaped tomato with dependable prolific production of large 8 - 16 oz dark pink to red fruits that is excellent for fresh slicing, stuffing, sauces or drying. The deeply ribbed or pleated shape always captures attention and the mildly sweet, unique flavor steals hearts. Originally from the Zapotec tribe outside of Oaxaca, Mexico.	\$3.15
	<b>Tomato - Cherry</b>	<b>Approx 25 seeds per pack</b>	
V1146	Black Cherry Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=64-75 days	Early, huge clusters of 1" round, deep purple cherry tomatoes with a blackish hue are irresistibly delicious with a sweet, complex, rich and sometimes salty - smoky flavor, characteristic of the black tomatoes. Very worthy of a place in the garden and kitchen. Beautiful to mix with other cherry tomatoes.	\$3.15
V1158	Cherry Roma Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=75-80 days	This cherry tomato combines the popularity of "grape" tomatoes with the spicy sweet flavor of the heirloom Roma tomatoes and voila! Here is the best grape tomato available, with heavy production of 1" long plum-shaped fruits that keep well for extended periods.	\$3.35
V1337	Chocolate Pear Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=65-80 days	This pear tomato has a base of traditional light tomato red swirled with an overlay of both green and brown hues very reminiscent of the luscious black tomatoes. The overall color is deceptive, as it is not red, green or brown, but all three. Slightly tart, then slightly sweet with a very full and rich tomato flavor that bursts in the mouth. It combines the richness of a paste tomato with the sweet and tart profile of an heirloom slicer.	\$3.15
V1338	Green Pear Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=65-80 days	The Green Pear tomato has a base of light green that shines through an overlay of translucent creamy yellow. The final color is almost even between a yellow and a green tomato. Initially fruity, meaty and substantial followed by bright, sweet notes and a long sustained finish. It is surprising, as it appears delicate, but has a very substantial taste and mouth feel.	\$3.15

Stock #	Product Name	Description	Price
V1159	Honkin' Big Black Cherry Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=65-70 days	Originally a sport or unknown tomato plant discovered growing outside Mayo Underwood's garden around 1995. She let it grow and found the taste was outstanding rich, complex and completely unexpected. Seeds were saved and it became a perennial hit with gardeners everywhere! This sport produces strong plants with a ton of very large, "black" cherry tomatoes easily the size of a half dollar with a sweet/acidic/salty flavor.	\$3.15
V1340	Sara's Galapagos Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=70-85 days	These tasty, sweet, full flavored prolific blood red currant sized tomatoes are very early, but produce over a long season. These tomatoes were brought from the Galapagos Islands by Sara Goldman, daughter of tomato aficionado Amy Goldman. These high yielding plants produce small, jewel-like tomatoes with a sweet flavor sure to be devoured in the garden! Like most of the smaller tomatoes, they are tolerant of a wide range of seasons and temperatures, as they need less water than their larger counterparts.	\$4.25
V1182	Wild Galapagos Tomato Seeds - (Solanum cheesmaniae) Days to Maturity:=70 days	This is one of two wild tomato species endemic to the Galapagos Islands, and the only one that is edible! This small grape sized yellow-orange tomato was found growing right along the seafront, just feet from the ocean in rocky, exposed and in almost soil-less conditions. The fruit is intensely sweet, complex and resistant to many tomato pests. We found that the flavor of many other small-fruited tomato varieties paled by comparison. This tomato grows in clusters and will be producing faster than you can harvest.	\$4.50
V1188	Yellow Pear Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=75 days	Small waxy-yellow pear-shaped fruits with definite necks, 1.5 -2" in diameter and a mild flavor. Very prolific and bears all season long. The fruits have a delicate sweet taste that has been called "the life of the salad". This is the same tomato your grandpa use to grow. A mild taste that kids love. Heat resistant.	\$3.15
	<b>Tomato - Pear/Plum</b>	<b>Approx 25 seeds per pack</b>	
V1141	Amish Paste Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=75-85 days	Plants are laden with whopping clusters of deep red, one pound, acorn or heart shaped fruits that have thick, sweet flesh with few seeds. Grows tall, needs staking or good support. Late 1800s Amish heirloom from Lancaster, Pa., via Wisconsin. Great sauce tomato, sweet and heavy yielding. Also good for slicing and drying. Exceptional for salsas.	\$3.35
V1148	Black Plum Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=75-82 days	Sweet, elongated, mahogany-hued, fat fruits with the most intense, complex tomato flavor we've found; deep and rich with a sweet, tangy aftertaste. Consistent producer of 3" plum-shaped tomatoes that get "blacker" in hot, sunny conditions. Does well in cool climates, but will not turn as black. Thick walled with lots of meat, they are wonderful for fresh eating, or sliced into a salad. Also makes a memorable sauce with its complex, lingering flavors. A great canning or drying tomato.	\$3.35
V1449	Burbank Red Slicing Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=70 days	Stocky bushes are 18 - 36" tall producing 6 - 8 oz red fruits perfect for slicing and canning. Very productive and fairly early for a tomato. Does well in drier climates. Mature fruit is a very deep red color with a satisfying bold tomato flavor.	\$3.15
V1425	Charlie Chaplin Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=75 - 78 days	A very unique, interesting and personable tomato, much like the famed silent actor himself! Fruit has exceptional old-fashioned rich heirloom tomato taste with 4-10 oz ruffled to deeply-lobed fruit that range from almost round and slightly flattened to elongated and pear-shaped. Plants are a lower-growing bushy type that like to spread out a bit, but will still need trellising. Grows to about 4-5'.	\$3.15
V1177	Italian Roma Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=73-92 days	The classic Italian paste and canning tomato, also used to add body to soups and juices. Early maturing, meaty plum shaped paste tomato; few seeds and a rich flavor. Compact plants bear well, up to 200 fruits per plant. Excellent for home garden use, works well in containers.	\$3.35
V1162	Japanese Black Trifele Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=65-80 days	One of the very darkest, black tomato varieties available with mahogany and black skin with green shoulders. Heavy production all season, providing basket after basket of perfect, shiny, pear shaped tomatoes that are beautiful and succulent, raw or cooked. An absolutely wonderful flavor with an extraordinary richness.	\$3.15
V1401	Jubilee Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=72-85 days	A golden orange tomato with 6-7 oz. fruits 2.5 - 3.5" in diameter, meaty thick walls, solid, with few seeds. Mild but good tomato flavor, considered a rich flavor for an orange tomato with heavy yields. Best for garden and local market, not for the far Northern climates. Most excellent for fresh use, slicing, juice, salads and canning or cooking.	\$3.15
V1173	Oregon Spring Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=55-80 days	Mouthwatering, luscious, nearly seedless, 4 - 5 oz. fruits are close to the perfect tomato. It is very early with large size fruits and good flavor. Able to set abundant crops in cool weather or under tough conditions. Reliable and uniform size, great for home gardening and fresh markets.	\$3.15

Stock #	Product Name	Description	Price
V1175	Principe Borghese Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=55-80 days	Small plum shaped fruits, averaging 1 - 2 oz. grow in clusters, very meaty with little juice and few seeds. The definitive classic tomato for sauces and sun drying, traditionally grown in the south of Italy. Deep rich classic sun dried tomato taste. They are also excellent for eating fresh.	\$3.15
V1440	San Marzano Redorta Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=75 - 80 days	A large paste tomato, 8 - 10 oz. with all of the flavor San Marzano is renowned for, but twice the size. Named for the Pizzo Redorta outside Bergamo, Italy. Very prolific in heat and cooler weather. An excellent paste tomato that is also great for canning, salsas, sauces and roasting. Lots of flesh with an easy to peel skin and a small seed cavity. The flavors are richer than San Marzano, with a balanced sweetness and tanginess with a touch of salt.	\$3.35
V1276	San Marzano Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=70-90 days	Rectangular flat-sided intensely red fruits 1 1/2" x 4" long, borne in clusters, this tomato is one of the most important commercial tomatoes of the early to mid 20th century. It is considered to be the parent for almost the entire plum tomato market in the United States today. Stores well. Excellent for paste or puree due to the high solid content of the fruit.	\$3.35
V1183	Shah/White Mikado Tomato Seeds - (Lycopersicon lycopersicum) Days to Maturity:=80 days	The original Shah or White Mikado Tomato dates to 1886 and is shrouded in mystery. Some think the strain has been lost, while others claim it has not. Either way, this is a unique, robust and delicious tomato for the home gardener. It grows 8 - 12 oz. flattened globes of creamy, pale to light yellow skinned with white flesh having a superb mildly sweet full bodied flavor. The flavor is more reminiscent of orange or pink tomatoes, not washed out or insipid like some white varieties.	\$3.35
V1186	Speckled Roman/Striped Tomato - (Lycopersicon lycopersicum) Days to Maturity:=75-85 days	The Striped or Speckled Roman Tomato hHproduction and color. Adds interest to any dish with its vibrant color and stripes. Very crack resistant. Heavy production until frost. This is an exceptional variety, probably the best salad tomato around. The excellent flavor, sweetness and good firm yet meaty texture make this ideal for creating sauces too. Makes a wonderfully unique dark red, very rich and fruity over toned sauce!	\$3.15
V1325	Stupice Tomato - (Lycopersicon lycopersicum) Days to Maturity:=52-85 days	Small to medium sized 3 - 6 oz red fruits, sometimes having green shoulders. Very productive, very early, with a flavor that improves with the season. Does well in cool weather, yet has good heat tolerance. Customers report that the flavor becomes exceptional when cooked or dried. Introduced to America from Czechoslovakian tomato breeder Milan Sodomka in the mid 1970s.	\$3.15
V1362	Super Sioux Tomato - (Lycopersicon lycopersicum) Days to Maturity:=70 days	Produces large amounts of smooth, crack-free, juicy thick walled round fruit around 4 oz. in size. Taste is more old fashioned with a notable acid "bite", but not overpowering. Since its introduction, has become well known as an outstanding hot weather tomato. It was bred by the University of Nebraska Experimental Station for better production during hot weather and for taste and disease resistance. Best for canning, sauces or fresh slicing use. Great choice for the home garden or market grower due to the long production season.	\$3.15
	<b>Tomatillo</b>	<b>Approx 25 seeds per pack</b>	
V1196	Purple Tomatillo - (Physalis ixocarpa) Days to Maturity=95 days	Grow tons of large, 2-3 oz. fruits, rich and purple with clear, delicate flesh. Tangy when green, then sweet in the ripe stage, the papery husks open as the tomatillos ripen in late summer. The green as well as the mature fruits are staples in Mexican/southwestern cuisines, and are often the secret of certain salsas/sauces. Good in ratatouille, too. Self-sterile, so plant at least two. Stores very well.	\$3.35
V1252	Verde Tomatillo - (Physalis ixocarpa) Days to Maturity=70-80 days	Bushy plants 3-4 ft. across, almost as tall. Incredibly productive - fruits are ripe when they burst their husk and are light to medium green, sticky and sweet/sour. Used extensively in Mexican cooking from salsas, moles and sauces to pies, jams and marinades. Known as tomate verde in Mexico.	\$3.35
	<b>Turnip</b>	<b>Approx 200 seeds per pack</b>	
V1275	Seven Top Turnip - (Brassica rapa) Days to Maturity=45-50 days	Best variety for masses of fine-flavored, old-fashioned, turnip greens. Produces consistently for a long period. Grown as a winter annual for spring greens.	\$3.15
V1305	Purple Top Globe Turnip - (Brassica rapa) Days to Maturity=45-65 days	Medium-green cut-leaf 14-22" tops uniform 6" smooth white globes, best at 3-4", sweet mild fine-grained white flesh, purplish-red above ground and white below.	\$3.15
	<b>Watermelon</b>	<b>Approx 25 seeds per pack</b>	

Stock #	Product Name	Description	Price
V1191	Katanya Watermelon - (Citrullus lanatus) Days to Maturity=60-70 days	Smaller "ice-box" sized melon with dark greenish black skin and very sweet, crisp, salmon-pink flesh. Normally grows 10 - 15 lbs and 10 - 12 inches in diameter. Early and prolific producer with sturdy vines - producing melons well into fall and cooler weather. Needs a moderate amount of space - much less than other larger sized varieties. Russian heirloom seed from "Katanya," a woman in northern Illinois. One of the best tasting smaller watermelons.	\$3.35
V1192	Moon and Stars Watermelon - (Citrullus lanatus) Days to Maturity=95-100 days	Sweet, pinkish red flesh with that old-time watermelon flavor. Large silver dollar to pea-sized moons on dark green and yellow speckled slightly ridged, thick skin show numerous stars. Leaves have yellow spots as well. Fruits are oblong, up to 2 ft. long and larger melons weigh 35 lbs. One of the extraordinarily sweet and flavorful moon-and-stars melons. This unique variety is on Slow Food USA Ark of Taste.	\$3.35
V1193	Sugar Baby Watermelon - (Citrullus lanatus) Days to Maturity=68-86 days	Excellent short-season producer, space saver that is packed with crisp, juicy flavor. Highly productive with 6-10 lbs. fruits on vines that are only about 6 feet long. Usually sets about 4 - 6 melons per plant. Melons are almost perfectly round with a very dark green to almost black rind, exceptionally sweet, deep-red flesh, small seeds, good texture and mouth-watering flavor. Smaller size is easy to fit in the refrigerator.	\$3.15
V1525	Turkish Watermelon Seeds - (Citrullus lanatus)		\$3.55
V1457	Orangeglo Watermelon - (Citrullus lanatus) Days to Maturity=85-100 days	Rich, pumpkin-colored flesh, with a pale lime green skin having dark green mottling growing like stripes this orange watermelon possesses one of the fruitiest of aromas and a sorbetlike texture that makes it excellent for frozen desserts. Many watermelons turn bland and insipid when frozen — not Orangeglo! Well known for its rampant vines and prolific production of oblong shaped melons weighing from 20 - 30 lbs, it needs some space but rewards you with lots of flavor. Interestingly, this melon will grow well in cooler climates, not suffering a large loss of production.	\$3.15
V1432	Klondike Striped Watermelon - (Citrullus lanatus) Days to Maturity=80 - 90 days	Blocky melon with a thin, hard, tough rind that is light green with dark green stripes. Melons grow 20 - 30 lbs with a stringless very sweet flesh deep scarlet to the rind with hardly any green before the rind. Sunburn resistant, fusarium resistant.	\$3.15
V1335	Golden Midget Watermelon - (Citrullus lanatus) Days to Maturity=65-82 days	Beautiful 3 lb miniature watermelon that's widely adapted with very sweet and refreshing rich-red flesh and dark-colored seeds. Picking at the perfect ripeness is easy because the thin tough green rind turns golden-orange when ready for harvest. 7-8" oval melons grow on compact vines and only need a small space, great for small or urban gardens.	\$3.15
	<b>Wheat</b>		
V1429	White Sonora Wheat - (Triticum aestivum)	One of the oldest surviving wheat varieties anywhere in North America. The earliest records document it was extensively planted in the mountains of Sonora, Mexico in the early 1700's, and was widely planted in California.	1 LB \$16.80 6oz \$6.00 3oz \$3.55
V1459	Pima Club Wheat - (Triticum aestivum)	One of four varieties used by the Pima Indians in southern Arizona since it was introduced by Father Kino in the sixteenth century into the Sonoran region of Northern Mexico and Southern Arizona that completely altered the food life of wheat.	1 LB \$16.80 6oz \$6.00 3oz \$3.55
